Buying Freedom Kwame Anthony Appiah, Martin Bunzl, 2018-06-05 If slavery is defined broadly to include bonded child labor and forced prostitution, there are upward of 25 million slaves in the world today. Individuals and groups are freeing some slaves by buying them from their enslavers. But slave redemption is as controversial today as it was in pre-Civil War America. In *Buying Freedom*, Kwame Anthony Appiah and Martin Bunzl bring together economists, anthropologists, historians, and philosophers for the first comprehensive examination of the practical and ethical implications of slave redemption. While recognizing the obvious virtue of the desire to buy the freedom of slaves, the contributors ask difficult and troubling questions: Does redeeming slaves actually increase the demand for--and so the number of--slaves? And what about cases where it is far from clear that redemption will improve the material condition, or increase the real freedom, of a slave? *Buying Freedom* includes essays by the editors and by Dean Karlan and Alan Krueger, Carol Ann Rogers and Kenneth Swinnerton, Arnab Basu and Nancy Chau, Stanley Engerman, Jonathan Conning and Michael Kevane, Jok Madut Jok, Ann McDougall, Lisa Cook, Margaret Kellow, John Stauffer, and Howard McGary.

Moonlocket Peter Bunzl, 2019-08-13 When infamous escapist Jack Door breaks out from prison, he sets out for the town of Brackenbridge, determined to find his missing treasure--the Moonlocket. But when Lily and Robert unwittingly find themselves caught up in Jack Door's search, they discover that Robert's history holds the secret to the Moonlocket's whereabouts.

Airborne Radioactive Contamination in Inhabited Areas, 2009-08-14 For many decades, investigations of the behaviour and implications of radioactive contamination in the environment have focused on agricultural areas and food production. This was due to the erroneous assumption that the consequences of credible contaminating incidents would be restricted to rural areas. However, due to the Chernobyl accident, more than 250,000 persons were removed from their homes, demonstrating a great need for knowledge and instruments that could be applied to minimise the manifold adverse consequences of contamination in inhabited areas. Also, today the world is facing a number of new threats, including radiological terrorism, which would be likely to take place in a city, where most people would become directly affected. A recent report from the US Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism concludes that it is most likely that a large radiological, or even nuclear, terror attack on a major city somewhere in the world will occur before 2013. For the first time ever, the specific problems of airborne radioactive contamination in inhabited areas are treated in a holistically covering treatise, pinpointing factorial interdependencies and describing instruments for mitigation. The state-of-the-art knowledge is here explained in *Airborne Radioactive Contamination in Inhabited Areas* by leading scientists in the various disciplines of relevance. Unique holistic description of airborne radioactive contamination of inhabited areas and its consequences State-of-the-art information on problems associated with both accidental and malicious contamination events, in particularly 'dirty bombs' Detailed description of processes and parameters governing the severity of contaminating incidents Written by key experts in the world

Foundational Issues in Human Brain Mapping Stephen José Hanson, Martin Bunzl, 2010 The field of neuroimaging has reached a watershed and critiques and emerging trends are raising foundational issues of methodology, measurement, and theory. Here, scholars reexamine these issues and explore controversies that have arisen in cognitive science, cognitive neuroscience, computer science, and signal processing.

Mobile and Entangled America(s) Maryemma Graham, Wilfried Raussert, 2016-05-12 A superb combination of focused case studies and high level conceptual thinking, this volume is an important monument in the ongoing development of Inter-American studies. The articles gathered here closely examine a wide variety of cultural phenomena implicated in the 'entanglements' which have defined the history of the Americas. From religious networks to music and dance, and across a range of literary and artistic works, the mobility of people, objects, and ideas in the Americas is expertly mapped. At the same time, the book represents a serious enterprise of theory-building. Drawing on the histories of postcolonial thought, mobility studies, and work on human migration, *Mobile and Entangled America(s)* clearly establishes a new interdisciplinary field attentive both to the complexities of cultural form and the pervasiveness of power relations. Each article stands as a significant piece of scholarship on its own, but all are in dialogue with each other. The result is a richly satisfying and important volume of cultural scholarship.

Eighteenth-Century British Literature and Postcolonial Studies Suvir Kaul, 2009-02-25 'This book convincingly challenges both the extremely short historical memory of most postcolonial work and the all-too-insularly English world still conjured by period specialists. Hogarthian whores and Grub Street hacks, coffee houses and fashionable pastimes, and the burgeoning of print culture all stand revealed as intimately bound to portents of plantation insurgency, agitation for abolition, and the vast fortunes produced by the labouring bodies of the poor, the colonized, and the enslaved. Eighteenth-century studies has never appeared in a more engaged and fascinating light.' Professor Donna Landry, University of Kent In this volume Suvir Kaul addresses the relations between literary culture, English commercial and colonial expansion, and the making of 'Great Britain' in the late seventeenth and eighteenth centuries. He argues that literary writing played a crucial role in generating the vocabulary of British nationalism, both in inter-national terms and in attempts to realign political and cultural relations between England, Scotland, and Ireland. The formal innovations and practices characteristic of eighteenth-century English literature were often responses to the worlds brought into view by travel writers, merchants, and colonists. Writers (even those suspicious of mercantile and colonial expansion) worked with a growing sense of a 'national literature' whose achievements would provide the cultural capital adequate to global imperial power, and would distinguish Great Britain for its twin success in 'arms and arts'. The book ranges from Davenant's theatre to Smollet's Roderick Random to Phillis Wheatley's poetry to trace the impact of empire on literary creativity. Key Features* An introduction to the impact of mercantilism and empire on the crafting of eighteenth-century British literature* Encourages students to examine the key formal innovations that define eighteenth-century British literary history as they were produced by writers who redefined

Chartwell Manor Glenn Head, 2021-05-25 No one asks for the childhood they get, and no child ever deserved to go to Chartwell Manor. For Glenn Head, his two years spent at the now-defunct Mendham, NJ, boarding school -- run by a serial sexual and emotional abuser of young boys in the early 1970s -- left emotional scars in ways

that he continues to process. This graphic memoir – a book almost 50 years in the making – tells the story of that experience, and then delves with even greater detail into the reverberations of that experience in adulthood, including addiction and other self-destructive behavior. Head tells his story with unsparing honesty, depicting himself as a deeply flawed human struggling to make sense of the childhood he was given.

Homophobias David A. B. Murray, 2009-12-23 What is it about “the homosexual” that incites vitriolic rhetoric and violence around the world? How and why do some people hate queers? Does homophobia operate differently across social, political, and economic terrains? What are the ambivalences in homophobic discourses that can be exploited to undermine its hegemonic privilege? This volume addresses these questions through critical interrogations of sites where homophobic discourses are produced. It provides innovative analytical insights that expose the complex and intersecting cultural, political, and economic forces contributing to the development of new forms of homophobia. And it is a call to action for anthropologists and other social scientists to examine more carefully the politics, histories, and contexts of places and people who profess hatred for queerness. The contributors to this volume open up the scope of inquiry into processes of homophobia, moving the analysis of a particular form of “hate” into new, wider sociocultural and political fields. The ongoing production of homophobic discourses is carefully analyzed in diverse sites including New York City, Australia, the Caribbean, Greece, India, and Indonesia, as well as American Christian churches, in order to uncover the complex operational processes of homophobias and their intimate relationships to nationalism, sexism, racism, class, and colonialism. The contributors also critically inquire into the limitations of the term homophobia and interrogate its utility as a cross-cultural designation. Contributors. Steven Angelides, Tom Boellstorff, Lawrence Cohen, Don Kulick, Suzanne LaFont, Martin F. Manalansan IV, David A. B. Murray, Brian Riedel, Constance R. Sullivan-Blum

Cogheart Peter Bunzl, 2019-02-12 When her father goes missing, thirteen-year-old Lily Hartman must team up with a clockmaker's son, Robert, and her mechanical fox, Malkin, to solve the mystery of her father's disappearance and his world-changing invention, a perpetual motion machine called the Cogheart.

Food Fabio Parasecoli, 2019 A consumer's guide to the food system, from local to global: our part as citizens in the interconnected networks, institutions, and organizations that enable our food choices. Everybody eats. We may even consider ourselves experts on the topic, or at least Instagram experts. But are we aware that the shrimp in our freezer may be farmed and frozen in Vietnam, the grapes in our fruit bowl shipped from Chile, and the coffee in our coffee maker grown in Nicaragua, roasted in Germany, and distributed in Canada Whether we know it or not, every time we shop for food, cook, and eat, we connect ourselves to complex supply networks, institutions, and organizations that enable our food choices. Even locavores may not know the whole story of the produce they buy at the farmers market. In this volume in the MIT Press Essential Knowledge series, food writer and scholar Fabio Parasecoli offers a consumer's guide to the food system, from local to global. Parasecoli describes a system made up of open-ended, shifting, and unstable networks rather than well-defined chains; considers healthy food and the contradictory advice about it consumers receive; discusses food waste and the implications for sustainability; explores food technologies (and culinary luddism); and examines hunger and food insecurity in both developing and developed countries. Parasecoli reminds us that we are not only consumers but also citizens, and as citizens we have more power to improve the food system than we do by our individual food choices.

Radionuclides in the Environment Clemens Walther, Dharmendra K. Gupta, 2015-10-30 This book provides extensive and comprehensive information to researchers and academicians who are interested in radionuclide contamination, its sources and environmental impact. It is also useful for graduate and undergraduate students specializing in radioactive-waste disposal and its impact on natural as well as manmade environments. A number of sites are affected by large legacies of waste from the mining and processing of radioactive minerals. Over recent decades, several hundred radioactive isotopes (radioisotopes) of natural elements have been produced artificially, including ⁹⁰Sr, ¹³⁷Cs and ¹³¹I. Several other anthropogenic radioactive elements have also been produced in large quantities, for example technetium, neptunium, plutonium and americium, although plutonium does occur naturally in trace amounts in uranium ores. The deposition of radionuclides on vegetation and soil, as well as the uptake from polluted aquifers (root uptake or irrigation) are the initial point for their transfer into the terrestrial environment and into food chains. There are two principal deposition processes for the removal of pollutants from the atmosphere: dry deposition is the direct transfer through absorption of gases and particles by natural surfaces, such as vegetation, whereas showery or wet deposition is the transport of a substance from the atmosphere to the ground by snow, hail or rain. Once deposited on any vegetation, radionuclides are removed from plants by the airstream and rain, either through percolation or by cuticular scratch. The increase in biomass during plant growth does not cause a loss of activity, but it does lead to a decrease in activity concentration due to effective dilution. There is also systemic transport (translocation) of radionuclides within the plant subsequent to foliar uptake, leading the transfer of chemical components to other parts of the plant that have not been contaminated directly.

Geochemical and Hydrological Reactivity of Heavy Metals in Soils H. Magdi Selim,William L. Kingery,2003-03-26 The hydrological and geochemical interactions between clay minerals and organic matter in soils directly influence the reaction, behavior, and mobility of heavy metals in soils. Geochemical and Hydrological Reactivity of Heavy Metals in Soils is one of few books that comprehensively illustrates this cause-and-effect relationship. It highlights anal

Plant-Soil Interactions at Low pH: Principles and Management R.A. Date,N.J. Grundon,G.E. Rayment,M.E. Probert,2012-12-06 The understanding of plant-soil interactions in acid soils is important for improved food production in many parts of the world. The context of the book touches on basic and applied aspects of the physics, chemistry and biology of acid soils and their effect on growth of plants. It contains a large section on management of acid soils for plant (food) production and on socioeconomic aspects of management of acid soils. This is important because a large portion of the world's acid soils occurs in less developed countries. Plant-Soil Interactions at Low pH: Principles and Management contains a substantial number of papers, including nine invited reviews, presented at the Third International Symposium of Plant-Soil Interactions at Low pH. The major themes include chemistry and physics of acid soils, microbial and faunal activity in acid soils, mechanisms of acid tolerance of plants, selection and breeding of acid-tolerant plants, diagnosis and correction of acid soil infertility, socioeconomic aspects of acid soil management and management systems for agriculture, horticulture and forestry on acid soils.

Health Risks of Radon and Other Internally Deposited Alpha-Emitters National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on the Biological Effects of Ionizing Radiations,1988-02-01 This book describes hazards from radon progeny and other alpha-emitters that humans may inhale or ingest from their environment. In their analysis, the authors summarize in one document clinical and epidemiological evidence, the results of animal studies, research on alpha-particle damage at the cellular level, metabolic pathways for internal alpha-emitters, dosimetry and microdosimetry of radionuclides deposited in specific tissues, and the chemical toxicity of some low-specific-activity alpha-emitters. Techniques for estimating the risks to humans posed by radon and other internally deposited alpha-emitters are offered, along with a discussion of formulas, models, methods, and the level of uncertainty inherent in the risk estimates.

Empowering Women in Russia Julie Hemment,2007-03-12 Julie Hemment's engrossing study traces the development encounter through interactions between international foundations and Russian women's groups during a decade of national collapse. Prohibited from organizing independently under state socialism, women's groups became a focus of attention in the mid-1990s for foundations eager to promote participatory democracy, but the version of civil society that has emerged (the third sector) is far from what Russian activists envisioned and what donor agencies promised. Drawing on ethnographic methods and Participatory Action Research, Hemment tells the story of her introduction to and growing collaboration with members of the group Zhenskii Svet (Women's Light) in the provincial city of Tver'.

Hazardous Wastes Richard J. Watts,Amy L. Teel,Courtney M. Gardner,2023-06-27 Hazardous Wastes An illuminating, problem-solving approach to source area analysis, environmental chemodynamics, risk assessment, and remediation In the newly revised second edition of Hazardous Wastes: Assessment and Remediation, a team of distinguished researchers delivers a foundational and comprehensive treatment of all aspects of hazardous waste problems. The book offers two sections—one on assessment and the following on remediation—while exploring topics crucial to the study of environmental science and engineering at the senior or master’s level. This latest edition includes a new emphasis on the chemistry of emerging contaminants, including perfluorinated compounds, 1,4-dioxane, methyl tert-butyl ether, and personal care products. It also offers updated data on contaminant Threshold Limit Value, Reference Dose, Slope Factor, Reference Concentration, and Inhalation Unit Risk. New remediation chapters also provide many design problems, incorporating economic analyses and the selection of various design alternatives. Approximately 200 new end-of-chapter problems—with solutions—have been added as well. Readers will also find: A thorough introduction to hazardous wastes, including discussion of pre-regulatory disposal and hazardous waste legislation Comprehensive discussions of common hazardous wastes, including their nomenclature, industrial uses, and disposal histories In-depth explorations of partitioning, sorption, and exchange at surfaces, as well as volatilization Extensive descriptions of the concepts of hazardous waste toxicology and quantitative toxicology Perfect for senior- and masters-level college courses in hazardous wastes in Environmental Science, Environmental Engineering, Civil Engineering, or Chemical Engineering programs, Hazardous Wastes: Assessment and Remediation will also earn a place in the libraries of professional environmental scientists and engineers.
