Freshwater Aquariums David Alderton, 2012-05-15 For beginning aquatic fancier looking to start out right with fish, *Freshwater Aquariums* by David Alderton is the ideal primer. A vertebrate that breathe primarily by means of gills and swim by means of fins is the author's lead-in to the first chapter called What are Fish? Alderton builds the reader's confidence by providing solid information about what fish are anatomically speaking, how they evolved, how they breathe, how they move, where they live, and how they behave. The new fancier's aquarium begins in chapter two with instructions on setting up the tank, including selecting the right size, figuring out how many fish, setting the tank, equipment, substrate, heating, lighting, filtrations, plants, water chemistry, assembly, and more. Choosing the freshwater fishes that appeal to the reader is the subject of *Introducing the Categories of Fish*, which schools readers in seven categories: Cyprinids (e.g., goldfish, minnows, and barbs), Characins (e.g., tetras), Cichlids (e.g., oscars, angelfish, and discus), Anabantoids (gouramis, bettas/Siamese fighting fish, and paradise fish), Toothcarps (guppies, swordtails, platies, black mollies, and killifish), Catfish, and others (loaches and Chinese algae eaters). The purchasing, maintenance, and feeding of fish are described in considerable details, and the author gives a basic overview of breeding and keeping fish healthy as well. Resources, glossary, and index conclude the book.

Empirical Foundations of Information and Software Science V Pranas Zunde, D.

Hocking, 2012-12-06 This is the proceedings of the Sixth Symposium on Empirical Foundations of Information and Software Sciences (EFISS), which was held in Atlanta, Georgia, on October 19-21, 1988. The purpose of the symposia is to explore subjects and methods of scientific inquiry which are of common interest to information and software sciences, and to identify directions of research that would benefit from the mutual interaction of these two disciplines. The main theme of the sixth symposium was modeling in information and software engineering, with emphasis on methods and tools of modeling. The symposium covered topics such as models of individual and organizational users of information systems, methods of selecting appropriate types of models for a given type of users and a given type of tasks, deriving models from records of system usage, modeling system evolution, constructing user and task models for adaptive systems, and models of system architectures. This symposium was sponsored by the School of Information and Computer Science of the Georgia Institute of Technology and by the U.S. Army Institute for Research in Management Information, Communications, and Computer Sciences (AIRMICS). 171e Editors vii CONTENTS 1 I.

The Life of Mary Baker G. Eddy and the History of Christian Science Willa Cather, 1993-01-01 This controversial biography of the founder of the Christian Science church was serialized in McClure's Magazine in 1907-8 and published as a book the next year. It disappeared almost overnight and has been difficult to find ever since. Although a Canadian newspaperwoman named Georgine Milmine collected the material and was credited as the author, *The Life Of Mary Baker G. Eddy* was actually written by Willa Cather, an editor at McClure's at that time. In his introduction to this Bison Book edition, David Stouck reveals new evidence of Cather's authorship of *The Life of Mary Baker G. Eddy*. He discusses her fidelity to facts and her concern with psychology and philosophy that would take creative form later on. Indeed, this biography contains some of the finest portrait sketches and reflections on human nature that Willa Cather would ever write.

Twelve Years a Slave Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

New Geographies Stephen Ramos, Neyran Turan, 2009-09 *New Geographies* journal aims to examine the emergence of the “geographic,” a new but for the most part latent paradigm in design today—to articulate it and to bring it to bear effectively on the social role of design. Although much of the analysis of this context in architecture, landscape, and urbanism derives from social anthropology, human geography, and economics, the journal aims to extend these arguments to the impact of global changes on the spatial dimension, whether in terms of the emergence of global spatial networks, global cities, or nomadic practices, and how these inform design practices today. Through essays and design projects, the journal aims to identify the relationship between the very small and the very large, and intends to open up discussions on the expanded role of the designer, with an emphasis on disciplinary reframings, repositionings, and attitudes.

Virginia Woolf and the Natural World Kristin Czarnecki, Carrie Rohman, 2011 *Virginia Woolf and the Natural World* is a compilation of thirty-one essays presented at the twentieth annual international conference on Virginia Woolf. This volume explores Woolf's complex engagement with the natural world, an engagement that was as political as it was aesthetic. The diversity of topics within this collection—ecofeminism, the nature of time, the nature of the self, nature and sporting, botany, climate, and landscape, just to name a few—fosters a deeper understanding of the nature of nature in Woolf's works. Contributors include Bonnie Kime Scott, Carrie Rohman, Diana Swanson, Elisa Kay Sparks, Beth Rigel Daugherty, Jane Goldman, and Diane Gillespie, among many others from the international community of Woolf scholars.

Dictionary of Americanisms John Russell Bartlett, 2018-08-05 Excerpt from *Dictionary of Americanisms: A Glossary of Words and Phrases Usually Regarded as Peculiar to the United States* The first edition of this Dictionary was published in New York in 1848. It met with a quick sale, and soon

passed out of print. Aware of its many imperfections, I began my preparations for a new edition before it had fully left the press. From that time to the day the last sheets of this edition left my hands for the printer, now ten years, I have been more or less occupied in its preparation. Nearly three years of this period I spent in the interior of the country, in the service of the United States as Commissioner on the Mexican Boundary; but even there, I failed not to note the peculiarities of the familiar language of the frontier, and carefully recorded the words and phrases I met with for future use. This experience enabled me to collect the singular words occurring in prairie and frontier life as well as those common to Texas, New Mexico, and California. Most of these have come from the Spanish, and are now fairly engrafted on our language. The other alterations and improvements made in this edition, consist in the addition of a very large number of words and phrases peculiar to the United States; so that it now contains probably twice as many as the first edition. The examples or illustrations from authors, showing the use of words, have also been greatly multiplied. This seemed desirable, as examples convey a far more correct idea of their meaning and use than a simple definition. The histories of words and their definitions have also been corrected and improved. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. All the Wonder that Would Be Stephen Webb, 2017-05-03 It has been argued that science fiction (SF) gives a kind of weather forecast – not the telling of a fortune but rather the rough feeling of what the future might be like. The intention in this book is to consider some of these bygone forecasts made by SF and to use this as a prism through which to view current developments in science and technology. In each of the ten main chapters - dealing in turn with antigravity, space travel, aliens, time travel, the nature of reality, invisibility, robots, means of transportation, augmentation of the human body, and, last but not least, mad scientists - common assumptions once made by the SF community about how the future would turn out are compared with our modern understanding of various scientific phenomena and, in some cases, with the industrial scaling of computational and technological breakthroughs. A further intention is to explain how the predictions and expectations of SF were rooted

in the scientific orthodoxy of their day, and use this to explore how our scientific understanding of various topics has developed over time, as well as to demonstrate how the ideas popularized in SF subsequently influenced working scientists. Since gaining a BSc in physics from the University of Bristol and a PhD in theoretical physics from the University of Manchester, Stephen Webb has worked in a variety of universities in the UK. He is a regular contributor to the Yearbook of Astronomy series and has published an undergraduate textbook on distance determination in astronomy and cosmology as well as several popular science books.
