Nuclear Fusion Edward Morse,2018-10-15 The pursuit of nuclear fusion as an energy source requires a broad knowledge of several disciplines. These include plasma physics, atomic physics, electromagnetics, materials science, computational modeling, superconducting magnet technology, accelerators, lasers, and health physics. Nuclear Fusion distills and combines these disparate subjects to create a concise and coherent foundation to both fusion science and technology. It examines all aspects of physics and technology underlying the major magnetic and inertial confinement approaches to developing nuclear fusion energy. It further chronicles latest developments in the field, and reflects the multi-faceted nature of fusion research, preparing advanced undergraduate and graduate students in physics and engineering to launch into successful and diverse fusion-related research. Nuclear Fusion reflects Dr. Morse's research in both magnetic and inertial confinement fusion, working with the world's top laboratories, and embodies his extensive thirty-five year career in teaching three courses in fusion plasma physics and fusion technology at University of California, Berkeley.

Pacifying the Homeland Brendan McQuade,2019-08-06 The United States has poured over a billion dollars into a network of interagency intelligence centers called "fusion centers." These centers were ostensibly set up to prevent terrorism, but politicians, the press, and policy advocates have criticized them for failing on this account. So why do these security systems persist? Pacifying the Homeland travels inside the secret world of intelligence fusion, looks beyond the apparent failure of fusion centers, and reveals a broader shift away from mass incarceration and toward a more surveillance- and police-intensive system of social regulation. Provided with unprecedented access to domestic intelligence centers, Brendan McQuade uncovers how the institutionalization of intelligence fusion enables decarceration without fully addressing the underlying social problems at the root of mass incarceration. The result is a startling analysis that contributes to the debates on surveillance, mass incarceration, and policing and challenges readers to see surveillance, policing, mass incarceration, and the security state in an entirely new light.

CRC Handbook of Metal Etchants Perrin Walker,William H. Tarn,1990-12-11 This publication presents cleaning and etching solutions, their applications, and results on inorganic materials. It is a comprehensive collection of etching and cleaning solutions in a single source. Chemical formulas are presented in one of three standard formats - general, electrolytic or ionized gas formats - to insure inclusion of all necessary operational data as shown in references that accompany each numbered formula. The book describes other applications of specific solutions, including their use on other metals or metallic compounds. Physical properties, association of natural and man-made minerals, and materials are shown in relationship to crystal structure, special processing techniques and solid state devices and assemblies fabricated. This publication also presents a number of organic materials which are widely used in handling and general processing...waxes, plastics, and lacquers for example. It is useful to individuals involved in study, development, and processing of metals and metallic compounds. It is invaluable for readers from the college level to industrial R & D and full-scale device fabrication, testing and sales. Scientific disciplines, work areas and individuals with great interest include: chemistry, physics, metallurgy, geology, solid state, ceramic and glass, research libraries, individuals dealing with chemical processing of inorganic materials, societies and schools.

The Boy Who Played with Fusion Tom Clynes,2015-06-09 This story of a child prodigy and his unique upbringing is "an engrossing journey to the outer realms of science and parenting" (Paul Greenberg, author of Four Fish). A PEN/E. O. Wilson Literary Science Writing Award Finalist Like many young children, Taylor Wilson dreamed of becoming an astronaut. Only Wilson mastered the science of rocket propulsion by the age of nine. When he was eleven, he tried to cure his grandmother's cancer—and discovered new ways to produce medical isotopes. Then, at fourteen, Wilson became the youngest person in history to achieve nuclear fusion, building a 500-million-degree reactor—in his parents' garage. In *The Boy Who Played with Fusion*, science journalist Tom Clynes narrates Wilson's extraordinary story. Born in Texarkana, Arkansas, Wilson quickly displayed an advanced intellect. Recognizing their son's abilities and the limitations of their local schools, his parents took a bold leap and moved the family to Reno, Nevada. There, Wilson could attend a unique public high school created specifically for academic superstars. Wilson is now designing devices to prevent terrorists from shipping radioactive material and inspiring a new generation to take on the challenges of science. If you're wondering how someone so young can achieve so much, *The Boy Who Played with Fusion* has the answer. Along the way, Clynes' narrative teaches parents, teachers, and society how and why we urgently need to support high-achieving kids. "An essential contribution to our understanding of the most important underlying questions about the development of giftedness, talent, creativity, and intelligence." —Psychology Today "A compelling study of the thrills—and burdens—of being born with an alpha intellect." —Financial Times
