Growing Greener Cities Eugenie L. Birch, Susan M. Wachter, 2011-09-02 Nineteenth-century landscape architect Frederick Law Olmsted described his most famous project, the design of New York's Central Park, as a democratic development of highest significance. Over the years, the significance of green in civic life has grown. In twenty-first-century America, not only open space but also other issues of sustainability—such as potable water and carbon footprints—have become crucial elements in the quality of life in the city and surrounding environment. Confronted by a U.S. population that is more than 70 percent urban, growing concern about global warming, rising energy prices, and unabated globalization, today's decision makers must find ways to bring urban life into balance with the Earth in order to sustain the natural, economic, and political environment of the modern city. In *Growing Greener Cities*, a collection of essays on urban sustainability and environmental issues edited by Eugenie L. Birch and Susan M. Wachter, scholars and practitioners alike promote activities that recognize and conserve nature's ability to sustain urban life. These essays demonstrate how partnerships across professional organizations, businesses, advocacy groups, governments, and individuals themselves can bring green solutions to cities from London to Seattle. Beyond park and recreational spaces, initiatives that fall under the green umbrella range from public transit and infrastructure improvement to aquifer protection and urban agriculture. *Growing Greener Cities* offers an overview of the urban green movement, case studies in effective policy implementation, and tools for measuring and managing success. Thoroughly illustrated with color graphs, maps, and photographs, *Growing Greener Cities* provides a panoramic view of urban sustainability and environmental issues for green-minded city planners, policy makers, and citizens.

Mapping Society: Settlement Structure in Later Bronze Age Ireland Victoria Ruth Ginn, 2016-01-22 This study examines Middle–Late Bronze Age (c. 1750–600 BC) domestic settlement patterns in Ireland. The results reveal a distinct rise in the visibility, and a rapid adaption, of domestic architecture, which seems to have occurred earlier in Ireland than elsewhere in western and northern Europe.
