Occupied Earth Gary Phillips,Richard Brewer,2015-10-13 RESISTANCE IS ALL For years, writers and filmmakers have speculated about the possibility of the Earth being invaded by aliens from another planet. But what if the aliens have been watching us, infiltrating us via human collaborators, or even surgically altering themselves to look human? *Occupied Earth* is a groundbreaking anthology that explores the idea of what the world would look like years after its conquest. 20 years after a successful invasion by the Makh-Ra, humanity still exists, only it has become subservient to a race of occupiers who govern the devastated planet. But, as much as things continue with some sense of normalcy, something has happened in the Mahk-Ra's empire. Earth, once considered a strategic beachhead of major importance to the Empire, has been downgraded in its value. Things are starting to degrade. Our planet is the last place any self-respecting Mahk-Ra officer wants to be assigned. Yet, despite everything, life continues. These stories bring us face to face with annihilation – and show how we can pull ourselves back from the brink. Featuring Rachel Howzell Hall, Lisa Morton, Matthew V. Clemens, Howard Hendrix, Nathan Walpow and more, OCCUPIED EARTH is coming. Stay safe. Stay strong. Survive at all costs.

Pervasive Social Computing Muhammad Ashad Kabir,Jun Han,Alan Colman,2016-05-11 This book presents a review of traditional context-aware computing research, identifies its limitations in developing social context-aware pervasive systems, and introduces a new technology framework to address these limitations. Thus, this book provides a good reference for developments in context-aware computing and pervasive social computing. It examines the emerging area of pervasive social computing, which is a novel collective paradigm derived from pervasive computing, social media, social networking, social signal processing and multimodal human-computer interaction. This book offers a novel approach to model, represent, reason about and manage different types of social context. It shows how users' social context information can be acquired from different online social networks such as Facebook, LinkedIn, Twitter and Google Calendar. It further presents the use of social context information in developing innovative smart mobile applications to assist users in their daily life. The mix of both theoretical and applied research results makes this book attractive to a variety of readers from both academia and industry. This book provides a new platform for implementing different types of socially-aware mobile applications. The platform hides the complexity of managing social context, and thus provides essential support to application developers for the development of socially-aware applications. The book contains detailed descriptions of how the underlying platform has been implemented using available technologies such as ontology and rule engines, and how this platform can be used to develop socially-aware mobile applications using two exemplar applications. The book also presents evaluations of the proposed platform and applications using real-world data from Facebook, LinkedIn and Twitter. Therefore, this book is a syndication of scientific research with practical industrial applications, making it useful to researchers as well as to software engineers.
