3D Game Engine Design David Eberly, 2006-11-03 The first edition of 3D Game Engine Design was an international bestseller that sold over 17,000 copies and became an industry standard. In the six years since that book was published, graphics hardware has evolved enormously. Hardware can now be directly controlled through techniques such as shader programming, which requires an entirely new thought process of a programmer. In a way that no other book can do, this new edition shows step by step how to make a shader-based graphics engine and how to tame this new technology. Much new material has been added, including more than twice the coverage of the essential techniques of scene graph management, as well as new methods for managing memory usage in the new generation of game consoles and portable game players. There are expanded discussions of collision detection, collision avoidance, and physics—all challenging subjects for developers. The mathematics coverage is now focused towards the end of the book to separate it from the general discussion. As with the first edition, one of the most valuable features of this book is the inclusion of Wild Magic, a commercial quality game engine in source code that illustrates how to build a real-time rendering system from the lowest-level details all the way to a working game. Wild Magic Version 4 consists of over 300,000 lines of code that allows the results of programming experiments to be seen immediately. This new version of the engine is fully shader-based, runs on Windows XP, Mac OS X, and Linux, and is only available with the purchase of the book.

Network Protocol Design with Machiavellian Robustness Brett Keith Watson, 2010-11-14 This thesis is on the subject of network protocol design. It takes a collection of known, practical problems that we face on the Internet—namely, abuses of the network—and considers these problems in light of both existing practical countermeasures and abstract analysis. Protocol design features and techniques with Machiavellian robustness are then proposed to address these problems, to the extent that such a remedy is possible. A protocol called 'Invite' is then designed from scratch using these new techniques. The Invite protocol thus serves as a practical example of design for Machiavellian robustness, but its duty as a protocol is to convey that robustness to some other protocol, so it is then applied to email (and its well-known abuses such as spamming and mailbombing). In that context, its effectiveness is analysed and compared with other approaches, both proposed and currently practised. Lastly, the broader implications of Machiavellian robustness are considered, suggesting possible avenues of future research.

Fanatical Military Recruiting Jeb Blount, 2019-03-12 Military Recruiting is a war. It's just a different kind of war than what you were prepared and trained to fight for. Recruiting is a war for talent. Smart, competent, and capable people are rare and in high demand. Every organization, from commercial enterprises, healthcare, non-profit, sports, and education, to the military is in an outright battle to recruit and retain these bright and talented people. Rather than bullets and bombs, the war for talent is won through high-impact prospecting activity, time discipline, intellectual agility, emotional intelligence, and human to human relationships. On this highly competitive, ever changing, asymmetrical battlefield, to win, you must operate at a level of excellence beyond anything asked of military recruiters before. Yet, in this new paradigm, many recruiters are struggling, and most recruiting units are staring down the barrel at 50 percent or more of their recruiters consistently missing Mission. It is imperative that we arm military recruiters with the skills they need to win in this challenging environment. The failure to make Mission is an existential threat to the strength and readiness of America's fighting forces and our democracy. Fanatical Military Recruiting begins where the Recruiting and Retention colleges of the various branches of the military leave off. It is an advanced, master's level training resource designed specifically for the unique demands of Military Recruiting. In FMR, you'll learn: The Single Most Important Discipline in Military Recruiting How to Get Out of a Recruiting Slump The 30-Day Rule and Law of Replacement Powerful Time and Territory Management Strategies that Put You in Control of Your Day The 7 Step Telephone Prospecting Framework The 4 Step Email and Direct Messaging Framework The 5 C's of Social Recruiting The 7 Step Text Message Prospecting Framework How to Leverage a Balanced Prospecting Methodology to Keep the Funnel Full of Qualified Applicants Powerful Human Influence Frameworks that Reduce Resistance and Objections The 3 Step Prospecting Objection Turn-Around Framework Mission Drive and the 5 Disciplines of Ultra-High Performing Military Recruiters In his signature right-to-the-point style that has made him the go-to trainer to a who's who of the world's most prestigious organizations, Jeb Blount pulls no punches.
