The Miner's Canary Niles Eldredge, 2022-02-08 Like the bird whose death signaled dangerous conditions in a mine, the demise of animals that once flourished should give humans pause. How is our fate linked to the earth's creatures, and the cycle of flourishing and extinction? Which are the simple workings of nature's order, and which are omens of ecological disaster? Does human activity accelerate extinction? What really causes it? In an illuminating and elegantly written account of the widespread reduction of the world's wildlife, renowned paleontologist Niles Eldredge poses these questions and examines humankind's role in the larger life cycles of the earth, composing a provocative general theory of extinction.

Vegetation of the Canary Islands Marcelino J. del Arco Aguilar, Octavio Rodríguez Delgado, 2018-07-18 The volcanic and oceanic nature of the Canary Islands, its rich plant biodiversity and high rate of endemism, as well as the relict character of some of its plant communities make it a territory of great biological interest. The main geographic, climatic, bioclimatic, biogeographic and floristic features of the Islands are shown and related to the distributional pattern of potential communities along an altitudinal gradient. Current vegetation units and their ecology are described and illustrated with numerous pictures. Potential vegetation units are summarized and comprehensive maps of the potential natural vegetation for each island are given. Human impact on the natural landscape, the occurrence of invasive plants, and the probable impact of climate change on the flora and vegetation are discussed. The conservation status of flora and vegetation are assessed. Four appendixes include a syntaxonomical scheme, a brief history of botanical studies and explorations in the Islands, ethnobotanical notes, and a list of selected literature.

Valuation of marine and estuarine coastal ecosystem services in the Canary Current large marine ecosystem region / Évaluation des services écosystémiques marins côtiers et estuariens dans la région du grand écosystème marin du courant des Canaries Food and Agriculture Organization of the United Nations, 2020-10-04 Ecosystem valuation is a process that assigns a monetary value to the benefits that are provided by an ecosystem and its ecosystem services. This study carries out the economic valuation of marine and estuarine coastal ecosystem services in the Canary Current Marine Ecosystem (CCLME). The CCLME stretches along the coast of Western Africa, from Morocco to Guinea, and is characterized by high biological productivity due to the upwelling of deep, cold oceanic waters along this coast. This also supports a high abundance of fish resources (both pelagic and demersal) and overall high biodiversity. This study reviews and assesses ecosystem services provided by the marine areas, coastal mangroves and seagrass meadows. These coastal areas not only provide habitats for some commercial fish species, but also feeding grounds, nurseries, or refuges. Therefore, mangroves and seagrasses can play an important role in maintaining fish stocks. L'évaluation des écosystèmes est un processus qui attribue une valeur monétaire aux avantages offerts par un écosystème et ses services écosystémiques. Cette étude cherche à réaliser une évaluation économique des services des écosystèmes côtiers marins et estuariens dans l'écosystème marin du courant des Canaries (CCLME). Le CCLME s'étend le long des côtes de l'Afrique de l'Ouest, du Maroc à la Guinée, et se caractérise par une productivité biologique élevée due à la remontée d'eaux océaniques froides et profondes (upwelling) le long de cette côte. Cela favorise également une grande abondance de ressources halieutiques (pélagiques et démersales) et une biodiversité globale élevée. Cette étude examine et évalue les services écosystémiques fournis par les zones marines, les mangroves côtières et les herbiers marins. Ces zones côtières fournissent non seulement des habitats pour certaines espèces de poissons commerciales, mais constituent également des aires d'alimentation, de nourriceries ou des refuges. Par conséquent, les mangroves et les herbiers marins peuvent jouer un rôle important dans le maintien des stocks de poissons.

MICRO 2016: Fate and Impact of Microplastics in Marine Ecosystems Juan Baztan, Bethany Jorgensen, Sabine Pahl, Richard C. Thompson, Jean-Paul Vanderlinden, 2016-11-29 Fate and Impact of Microplastics in Marine Ecosystems: From the Coastline to the Open Sea brings together highlights from the conference proceedings for MICRO 2016: Fate and Impact of Microplastics in Marine Ecosystems: From the Coastline to the Open Sea. While the presence of microplastics in ecosystems has been reported in the scientific literature since the 1970's, many pressing questions regarding their impacts remain unresolved. This short format title draws from the shared scientific and technical material and summarizes the current research and future outlook. Includes a range of topics, from macro- to microplastics Presents data from source to sink, including occurrence and distribution of microplastics in freshwater bodies, coastal zones, and the open ocean Presents the impacts of microplastics on marine life as well as microplastics as vectors of biological and chemical contaminants Provides important analysis on solutions and next steps

Environmental Impact of Agricultural Production Activities Larry W. Canter, 2018-01-18 The book summarizes actual and/or relative environmental impacts resulting from existing and emerging agricultural production technologies, as practised in the USA. Case studies of environmental impacts of agricultural practices are discussed in one chapter, while separate chapters consider water and soil, air quality, noise and waste impacts. Air pollutants from cultivation operations, burning, agricultural vehicles, harvesting and grain handling, pesticide applications, wind erosion etc. are all considered. Noise produced by agricultural activities and exposure patterns for agricultural workers are examined. An annotated bibliography is included for the environmental impacts discussed in the text. Emerging agricultural production technologies such as nitrogen fixation, genetic engineering, plant growth regulation, erosion control, water management and waste utilization etc. are also compared for efficiency and environmental impacts.

Ecology and Evolution of Plant-Herbivore Interactions on Islands Xoaquín Moreira, Luis Abdala-Roberts, 2024-01-03 Theory and early empirical work posed that herbivore pressure should be lower on islands than on the mainland owing to lower herbivore abundance and diversity in insular systems. Consequently, plant taxa found on islands are expected to be less protected or even to have lost their defences completely. While early observational studies supported the prediction of lower herbivory and plant defences on islands, recent island-mainland comparisons have yielded mixed results, with some studies finding no differences between islands and mainlands or, surprisingly, higher herbivory and plant defences on islands. In this book, the authors aim to re-assess current theory and initiate a new generation of work on insularity effects on plant-herbivore interactions. This book aims to fill the research gaps by integrating the research that has been done to date and by compiling and summarising new research on insularity effects on plant-herbivore interactions. It provides a critical examination of the patterns in light of classical theory and identifies potential mechanisms or underlying processes. It also aims to raise new questions that will form the basis for a revised and more robust research programme.

The canary in the coal mine Ewald Engelen, Marianne Thieme, 2016-05-04 Ewald Engelen and Marianne Thieme warn against the unsustainability of today's politics and financial choices. Like a canary in a coal mine, they identify the dangers that jeopardise our future. Such as the fossil perspective, which has led to the near-complete depletion of the collected reserves of fossil fuels. Or the fact that famine is not the result of insufficient food production,

but predominantly due to food distribution and waste issues. And that conflicts over water are not a thing of the distant future, but are already manifest in the present. The majority of politicians and scientists opt for marginal changes within the status quo, focused on more economic growth and increased free trade. Ewald Engelen and Marianne Thieme advocate a radical change of direction. Engelen from an economic perspective, Thieme from an ecological standpoint. They reach a common conclusion: the financial system and the political structure are rotten to the core. Plan B is unavoidable. Ewald Engelen (1963) is professor of financial geography at the University of Amsterdam, where he studies the global financial system. As a publicist and activist, he is well-known for his criticism of the euro and TTIP, the trade agreement between the United States and the European Union. Marianne Thieme (1972) is group leader for the Party for the Animals in the House of Representatives in the Netherlands, lawyer, animal rights and environmental activist and publicist. In 2002 she was one of the co-founders of the Party for the Animals.

Sustainable Desalination Handbook Gnaneswar Gude,2018-03-07 Sustainable Desalination Handbook: Plant Selection, Design and Implementation provides the comprehensive knowledge base required for efficient and sustainable process design for existing and new desalination plants around the world. This valuable resource for understanding and utilizing the most recent developments in desalination technologies and methods addresses the necessary components, including process design and implementation, operational strategies, and novel discoveries that minimize environmental impacts. In addition, the book features essential illustrations, operational details, issues and potential solutions and sustainable management strategies for present and future desalination plants. Explains plant design and process selection criteria for each desalination process Presents international regulations and permitting for intake and discharge locations, design and disposal Provides energy recovery schemes, optimization and process controls Covers renewable energy sources, such as nuclear, geothermal, solar and wind powered desalination, energy storage and optimization Includes case studies of recent desalination projects and process design

Mycorrhizas - Functional Processes and Ecological Impact Concepción Azcón-Aguilar,Jose Miguel Barea,Silvio Gianinazzi,Vivienne Gianinazzi-Pearson,2009-06-20 Mycorrhizal symbioses are central to the multitrophic interactions that impact plant productivity, competitiveness and survival. This book integrates present-day knowledge from well-known research groups on some of the topics which are at the forefront of mycorrhizal research. Topics include the cell programmes that drive mycorrhiza formation and function, the processes sustaining symbiotic mutualism, stress response mechanisms in mycorrhizal symbionts, and the diversity and ecological impacts of mycorrhizal systems. The efficient management of mycorrhizal systems has the potential to support the sustainable production of quality foods while ensuring environmental quality for future generations.

Successful Case Studies in the Canary Islands' Tourism Industry Rosa M. Batista Canino,Teresa Aguiar Quintana,2017-08-21 This book offers an interesting overview of good practices in the tourism industry. Its main strength is that its focus is not solely limited to hotels; rather, it provides several snapshots of the way economic activities of various different natures have been properly managed in order to make the Canary Islands a successful symbol of integrated tourist supply for a range of customers. Each case study provided here offers particular insights into the way local resources, including physical, environmental, human, and entrepreneurial factors, have been exploited in order to boost tourism. The book can be also serve as a reference tool for those who are thinking about improving their business or starting a new one.

Globally Threatened Birds in Europe Borja Heredia,Laurence Rose,Mary Painter,BirdLife International,1996-01-01 Of some 10000 bird species in the world, 514 are to be found in Europe. Of these, twenty-six European species are globally threatened & risk extinction if their populations are not actively built up. This series of action plans for Europe's most threatened species is the result of a joint project carried out by BirdLife International, in collaboration with Wetlands International, involving over 370 experts in almost every European country. This book will be of interest to conservationists at both national & local level, educators & all those interested in the conservation of Europe's bird heritage.

12,000 Canaries Can't Be Wrong John Molot,2014-06-01 A doctor explains how our environment affects our health, with a nine-step plan to help with fibromyalgia, IBS, and other conditions. In the old days, canaries were used to detect carbon monoxide in coal mines. Today, countless people suffer due to toxins and chemicals that surround us in the modern world, and Dr. John Molot, over the decades, has seen more than twelve thousand patients with environmentally linked illnesses. In this book, Molot explains how the environment contributes to the development and progression of many common conditions and illnesses, including chronic fatigue syndrome, fibromyalgia and other pain disorders, chemical sensitivity, irritable bowel syndrome, allergies and asthma, diabetes, autistic spectrum disorder, and even obesity—and offers an action plan that will make a positive difference to our health, and to the health of our children. “Compelling and well-written, this is a solidly researched, detailed explanation of the causes and effects of numerous modern health issues . . . It’s possible to skip straight to the treatment plan, but it would be a shame, considering how persuasive, fascinating, and often mind-blowing Molot’s case is.” —Publishers Weekly
