Cancer on Trial Peter Keating, Alberto Cambrosio, 2011-12-25 Until the early 1960s, cancer treatment consisted primarily of surgery and radiation therapy. Most practitioners then viewed the treatment of terminally ill cancer patients with heroic courses of chemotherapy as highly questionable. The randomized clinical trials that today sustain modern oncology were relatively rare and prompted stiff opposition from physicians, who were loath to assign patients randomly to competing treatments. Yet today these trials form the basis of medical oncology. How did such a spectacular change occur? How did medical oncology pivot from a nonentity and, in some regards, a reviled practice to the central position it now occupies in modern medicine? In *Cancer on Trial* Peter Keating and

Alberto Cambrosio explore how practitioners established a new style of practice, at the center of which lies the cancer clinical trial. Far from mere testing devices, these trials have become full-fledged experiments that have redefined the practices of clinicians, statisticians, and biologists. Keating and Cambrosio investigate these trials and how they have changed since the 1960s, all the while demonstrating their significant impact on the progression of oncology. A novel look at the institution of clinical cancer research and therapy, this book will be warmly welcomed by historians, sociologists, and anthropologists of science and medicine, as well as clinicians and researchers in the cancer field.

Cancer Survivorship Patricia A. Ganz, 2007-07-28 This book provides the necessary information about not only the clinical aspects of caring for cancer survivors, but also the psychosocial impacts. There are multiple resources available to serve as oncology textbooks, but nothing to provide the necessary information on patient care for the non-MD members of the cancer patient management team. In the post-treatment phase, the management team must go beyond the realm of conventional follow-up, helping the patient to intellectually understand and emotionally grasp the path ahead. Cancer Survivorship will prove a vital tool to physicians, nurses, clinical social workers and mental health professionals.

Improving Oncology Worldwide Uta Schmidt-Straßburger, 2022-06-20 This open access book describes strategies and experiences of highly skilled professionals in improving oncology care worldwide. The book is structured into three main sections with several chapters each, reflecting the authors' individual, real-life experiences. It explores ways to improve oncology education and scientific training, how to set up and run a clinical research facility ethically and efficiently in low- and middle-income settings, addressing the challenges that the workforce encounters in the real world. The main challenges of today's oncologists seem to be the ever-growing patient care and administrative workload and the risk of burn-out. What are the best strategies to maintain a healthy work-life for the benefit of the patients, the physicians and society, taking into account the different needs, depending on factors like peace, social and gender equality? This book addresses oncologists all over the world and their allies throughout the associated industries to highlight the importance of shared and sustainable education, clinical research and global cancer care.

Systemic Treatment of Non-Small Cell Lung Cancer Giuseppe Giaccone, 2012-05-31 Lung cancer is the leading cause of cancer mortality worldwide, and non-small cell lung cancer (NSCLC) accounts for about 85% of all cases of lung cancer. Most patients present with advanced disease and five-year survival is low at about 15%. Surgery is the main treatment for early stage disease. If patients are deemed inoperable, systemic chemotherapy is considered. For patients with locally advanced disease, multimodality therapy is administered where chemotherapy is given in combination with definitive radiation therapy or surgery in selected cases. Cytotoxic chemotherapy regimens mainly consist of a platinum doublet. Biologic agents are increasingly being incorporated into

treatment regimens. This pocketbook summarises the latest evidence-based and practical information on the use of systemic therapies in the management of non-small cell lung cancer (NSCLC), for early stage, locally advanced, and metastatic disease. Including contributions from leading thoracic oncologists from North America and Europe, the book covers the range of therapies currently available to clinicians including cytotoxic chemotherapy, biologic therapies, and other novel agents. This book will serve as an invaluable reference for all health care professionals involved in the management of patients with NSCLC.

The Comprehensive Cancer Center Mahmoud Aljurf, Navneet S. Majhail, Mickey B.C. Koh, Mohamed A. Kharfan-Dabaja, Nelson J. Chao, 2021-10-28 This open access book provides a valuable resource for hospitals, institutions, and health authorities worldwide in their plans to set up and develop comprehensive cancer care centers. Comprehensive cancer programs also provide a nexus for the running of clinical trials and implementation of novel cancer therapies with the overall aim of optimizing comprehensive and holistic care of cancer patients and providing them with the best opportunity to improve quality of life and overall survival. This book's self-contained chapter format aims to reinforce the critical importance of comprehensive cancer care centers while providing a practical guide for the essential components needed to achieve them, such as operational considerations, guidelines for best clinical inpatient and outpatient care, and research and quality management structures. Intended to be wide-ranging and applicable at a global level for both high and low income countries, this book is also instructive for regions with limited resources. The Comprehensive Cancer Center: Development, Integration, and Implementation is an essential resource for oncology physicians including hematologists, medical oncologists, radiation oncologists, surgical oncologists, and oncology nurses as well as hospitals, health departments, university authorities, governments and legislators.

From Cancer Patient to Cancer Survivor: Lost in Transition National Research Council, Institute of Medicine, 2006-04-27 This report of the proceedings of a symposium held in conjunction with the release of the IOM report, From Cancer Patient to Cancer Survivor: Lost in Transition, represents an effort on the part of the American Society of Clinical Oncology (ASCO), the National Coalition for Cancer Survivorship (NCCS), and the Institute of Medicine (IOM) to further disseminate the findings and recommendations of the IOM report and to take the next step toward implementation of those recommendations. The symposium and this report serve as important vehicles to raise awareness, fill gaps that have existed in cancer patients' long-term care, and chart a course for quality care for cancer survivors and their families. More than 100 stakeholders in the cancer community, including survivors, advocates, healthcare providers, government officials, insurers and payers, and researchers participated in the symposium. This report culminates a series of work at the IOM focused on cancer survivorship. The idea to embark on a major study of cancer survivorship within the National Academies originated with the National Cancer Policy Board (NCPB). The NCPB was established in 1997 in the IOM and the National Research Council's Division of Earth and Life Studies at the request of the National Cancer Institute (NCI), the National Institutes of Health, and the President's Cancer Panel. The NCPB identified emerging policy issues in the nation's effort to combat cancer, and prepared reports that address those issues, including a series of reports on topics ranging from cancer prevention to end-of-life care.

Introduction to Clinical Oncology Stanley T. Crooke, Archie W. Prestayko, 2013-10-22 9780121978020 Cancer and Chemotherapy, Volume II: Introduction to Clinical Oncology provides the basic framework for understanding antineoplastic drugs. The use of

chemotherapeutics in the treatment of the most common human malignancies, including leukemias and lymphomas, is discussed. Solid tumors such as those affecting the breast and lung, head and neck, brain and spinal cord are also considered. Comprised of 17 chapters, this volume begins with an overview of leukemias and lymphomas, including their incidence, pathology, and clinical features. The discussion then turns to solid tumors such as breast and lung carcinoma; head and neck cancers; cancer of the brain and spinal cord; gastrointestinal, genitourinary, and gynecological cancers; and malignant melanoma. The next section is devoted to nutritional and infectious disease aspects of cancer and examines infections that arise in the cancer patient, particularly pneumonia and septicemia. The diagnosis of and therapy for these infections are outlined, along with granulocyte transfusion and prophylaxis of infection. The final chapter deals with nutrition in cancer patients and describes the link between cancer and malnutrition as well as the mechanisms of cancer-associated malnutrition. The advantages and methods of nutritional support for cancer patients are also highlighted. This book should be a valuable resource for oncologists.

Radiation Oncology William Small, 2013-05-28 Radiation Oncology provides residents, fellows, and clinicians with a practical, evidence-based guide to the current management of difficult cases in radiation oncology. Emphasis is on the management of those clinical challenges commonly seen in practice that the community practitioner would normally handle without outside referral. The book offers comparisons of treatment approaches to difficult situations, allowing the reader to compare their current treatment approach to that of experts and others in the community. Radiation Oncology is organized in seven sections corresponding to the major treatment areas of radiation oncology. Each section includes three cases to illustrate specific clinical challenges for which there is no clear treatment protocol. The case discussion includes an expert opinion on optimal management along with alternatives from a second academic expert's perspective and from a community practitioner's perspective. Radiation Oncology features: Evidence-based approach to difficult management challenges in radiation oncology Expert authors provide evidence assessment and management summaries through presentation of relevant cases Community practitioner reviewers ensure real-world relevance of each discussion Reviews the most relevant literature pertaining to the challenging scenarios clinicians encounter every day Management alternatives allow discussion of the full range of management options and specifics for difficult problems including hardline recommendations

Cancer Clinical Trials: Proactive Strategies Stanley P. L. Leong, 2007-11-25 Clinical trials remain the most important vehicle for improving the care of cancer patients. Leading experts discuss the critical issues covering the spectrum of important topics from planning to application. The book has a foreword by Samuel A. Wells, Jr., MD, Professor of Surgery, Duke University Medical Center, Durham, NC, former Director of the American College of Surgeons and Founder of the American College of Surgeons Oncology Group.

The History of Oncology D. J. Th. Wagener, 2009-07-13 'The story of oncology is not only fascinating but also contains many accounts of dead ends, chance discoveries, illusions, mistakes and disappointments alongside the few successes.' These words are taken from the introduction to this book. The author, professor emeritus of Medical Oncology, reviews all aspects of the problem of cancer from a historical perspective, from the oldest existing records to the latest scientific and medical advances. It will interest the many people engaged in the treatment of cancer to read how the current therapeutic methods came about, and the book may also provide inspiration for cancer researchers, and for all those directly or indirectly involved with cancer. The layman looking for background information on a particular treatment may find it useful too. The various chapters can be read independently. A glossary and a few explanatory diagrams augment

the text. This book grew out of an invitation the author received to lecture on the history of oncology. During his background reading, he discovered that there was no single volume dealing with the entire history of the subject. Fortunately, however, a great deal of information could be found here and there in the literature. As he read, he was struck by the fascinating stories behind many discoveries, and felt impelled to put them together in a single comprehensive account. The results of his labors are presented in this remarkable volume. The author, Prof. D.J.Th. (Theo) Wagener, was head of the department of Medical Oncology at the Radboud University Nijmegen Medical Centre in the Netherlands from 1982 to 2001, chairman of the Educational Committee of the European Society of Medical Oncology (ESMO), a member of the Educational Committee of the American Society of Clinical Oncology (ASCO) and a member of various international scientific working groups, mainly of the European Organization for Research and Treatment of Cancer (EORTC).

Thoroughly updated and reorganized with five new chapters, the Fourth Edition emphasizes new development in molecular biology, hormone therapy, and the pharmacology of anti-cancer drugs. Features updated coverage of the basic science of radiotherapy and experimental radiation in addition to expansive coverage of new drugs developments.
