Visual Optics of Head-up Displays (HUDs) in Automotive Applications Shigeru Okabayashi,1996 This title examines head-up display technology (HUD) and its application in the automotive industry. With the recent trend toward higher-speed mobility, as typified by the plan in Japan to build a second Tomei expressway linking Tokyo, Nagoya and Osaka, there is a need for more complex and accurate navigation or route guidance systems. In addition, older drivers, whose vision may be declining, must be able to obtain the necessary information for safe vehicle operation. The author demonstrates that HUD, originally developed for weapons targeting in fighter planes, is ideal for meeting these future automotive navigational and social needs. As HUDs become a standard automotive feature this work will be an important reference to this rapidly developing technology.

Emerging Trends in Intelligent and Interactive Systems and Applications Madjid Tavana,Nadia Nedjah,Reda Alhajj,2020-12-17 This book reports on the proceeding of the 5th International Conference on Intelligent, Interactive Systems and Applications (IISA 2020), held in Shanghai, China, on September 25–27, 2020. The IISA proceedings, with the latest scientific findings, and methods for solving intriguing problems, are a reference for state-of-the-art works on intelligent and interactive systems. This book covers nine interesting and current topics on different systems' orientations, including Analytical Systems, Database Management Systems, Electronics Systems, Energy Systems, Intelligent Systems, Network Systems, Optimization Systems, and Pattern Recognition Systems and Applications. The chapters included in this book cover significant recent developments in the field, both in terms of theoretical foundations and their practical application. An important characteristic of the works included here is the novelty of the solution approaches to the most interesting applications of intelligent and interactive systems.
