Measuring Academic Research Ana Andres,2009-11-11 Measuring Academic Research outlines how to undertake a bibliometric study, a topic of vital importance in academic research today. Scientometrics studies assess scientific productivity and can be applied to all disciplines. Many analyses have been applied in relation to bibliometric studies, but few have shown how to actually carry out the analysis. This book provides a guide on how to develop a bibliometric study, from the first step in which the topic study has to be set, to the analysis and interpretation. A practical and easy to read guide on how to carry out a bibliometric study Gives a wide and up-to-date view about the most common scientometric indexes Analyses are illustrated with multiple and practical examples about their application

Research Shortcuts Judi Kesselman-Turkel, Franklynn Peterson,2003-10-27

There are proper ways to research a paper...and there are the ways most students do it: laboriously, tediously, and inefficiently. Here are the techniques and shortcuts that the pros use. They will enable students to find their way to the best resources for their own projects. From preparing the preliminary outline, work file, and bibliography, *Research Shortcuts* proceeds to using the appropriate resource guides, as well as modern aids to research. It also discusses shortcuts that reach the experts: writing letters that get questions answered, and making face-to-face (or telephone)

interviews pay off. A final section is devoted to using the research data: first drafts, choosing specific quotes wisely, paraphrasing, and final drafts.

EB00K: Research Interviewing: The Range of Techniques Bill

Gillham, 2005-08-16 * The most comprehensive book available on methods in research interviewing! * What is research interviewing? * What techniques are used? Exactly what do you do in each technique? * How is interview data analysed and written up? The robust, real-world approach makes this book appropriate for practitioner researchers and postgraduate students up to PhD level. Covers distance and face-to-face interviewing, from the un-structured and naturalistic to the highly structured, focused and time-efficient. Emphasis is placed on using the most appropriate methods for the research purpose and how to identify which method is practicable. Based on over thirty years of teaching and supervising research and postgraduate students, the author anticipates questions and difficulties at a level of practical detail. Practical and easy to use, this book is essential for anyone doing research interviewing.

Returning Individual Research Results to Participants National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on the Return of Individual-Specific Research Results Generated in Research Laboratories, 2018-09-23 When is it appropriate to return individual research results to participants? The

immense interest in this question has been fostered by the growing movement toward greater transparency and participant engagement in the research enterprise. Yet, the risks of returning individual research results—such as results with unknown validity—and the associated burdens on the research enterprise are competing considerations. Returning Individual Research Results to Participants reviews the current evidence on the benefits, harms, and costs of returning individual research results, while also considering the ethical, social, operational, and regulatory aspects of the practice. This report includes 12 recommendations directed to various stakeholders—investigators, sponsors, research institutions, institutional review boards (IRBs), regulators, and participants—and are designed to help (1) support decision making regarding the return of results on a study-by-study basis, (2) promote high-quality individual research results, (3) foster participant understanding of individual research results, and (4) revise and harmonize current regulations.

Measuring Research Cassidy R. Sugimoto, Vincent Larivière, 2018 Policy makers, academic administrators, scholars, and members of the public are clamoring for indicators of the value and reach of research. The question of how to quantify the impact and importance of research and scholarly output, from the publication of books and journal articles to the indexing of citations and tweets, is a critical one in predicting innovation, and in deciding what sorts of research is supported and whom is hired to carry it

out. There is a wide set of data and tools available for measuring research, but they are often used in crude ways, and each have their own limitations and internal logics. *Measuring Research: What Everyone Needs to Know(R)* will provide, for the first time, an accessible account of the methods used to gather and analyze data on research output and impact. Following a brief history of scholarly communication and its measurement -- from traditional peer review to crowdsourced review on the social web -- the book will look at the classification of knowledge and academic disciplines, the differences between citations and references, the role of peer review, national research evaluation exercises, the tools used to measure research, the many different types of measurement indicators, and how to measure interdisciplinarity. The book also addresses emerging issues within scholarly communication, including whether or not measurement promotes a publish or perish culture, fraud in research, or citation cartels. It will also look at the stakeholders behind these analytical tools, the adverse effects of these quantifications, and the future of research measurement.

Access to Research Data in the 21st Century National Research Council,Policy and Global Affairs,Science, Technology, and Law Panel,2002-05-09 In the years since the Shelby Amendment, scientists, industry, and policy makers have struggled over how the public's new right of access should be applied to scientific data. There is loose agreement that research data should be accessible, but wide disagreement over the depth to which the public has such a right. The National Academies' Science, Technology, and Law Program held a workshop to explore the mounting tensions in the federal regulatory process between the need to provide access to research data and the need to protect the integrity of the research process. The workshop provided a picture of the debate arising from passage of the Shelby Amendment and the resulting OMB revisions of Circular A-110. This report is a summary of the workshop.

Using Sources Effectively Robert A. Harris,2016-10-04 This text targets the two most prominent problems in current research-paper writing: the increase in unintentional plagiarism and the ineffective use of research source material. Designed as a supplementary textbook, it will help every student who uses research in writing. APA and MLA citation styles have been updated throughout the text, and there is material on research strategies and source selection (Chapter 2), a chapter on quoting sources effectively (Chapter 4),

and a chapter on grammar and mechanics (Chapter 9). New to this edition: A copy of our booklet A Sample of the Writings of Robert A. Harris is included free of charge. With dedicated sections on plagiarism, figurative language, and creative thinking, this compilation of materials is a handy resource for any student.

The Complete Idiot's Guide to Research Methods Laurie Rozakis, 2004 Presents the complete idiot's guide to collecting research including advice on drafting a document, summarizing and paraphrasing, primary and secondary sources, and plagiarism.

Research Strategies William Badke, 2014-01-16 Online resources have given us access to more knowledge than ever before. Were buried in data, and defining what is and what is not genuine information becomes more of a challenge all the time. In this fifth edition of Research Strategies, author William Badke helps you make sense of all of the available information, shows you how to navigate and discern it, and details how to use it to your advantage to become a better researcher. Badke focuses on informational research and provides a host of tips and advice not only for conducting research, but also for everything from finding a topic to writing an outline to documenting resources and polishing the final draft. Study guides, practice exercises, and assignments at the end of each chapter help reinforce each lesson. An experienced research instructor who has led thousands of students to become better researchers, Badke uses humor to help you gain a better understanding

of today's complex, technological world. Research Strategies provides the skills and strategies to efficiently and effectively complete a research project from topic to finished product. It shows how research can be exciting and even fun.

Finding the Path National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Federal Policy for Access to Research Resources, 1999-11-28 On January 27-28, 1999, the NRC Commission on Life Sciences organized Finding the Path: Issues of Access to Research Resources, a conference to explore the breadth of problems and opportunities related to obtaining and transferring research resources. The following summary of the 2-day meeting lays out the problems concerning access to research resources as discussed by 2 dozen speakers and members of the audience.

Responsible Science Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, Panel on Scientific Responsibility and the Conduct of Research, 1993-02-01 Volume II of Responsible Science includes background papers and selected institutional reports, policies, and procedures that were used to develop Volume I. Topics discussed include traditions of mentorship in science; data handling practices in the biological sciences; academic policies and standards governing the conduct of research practices; congressional interest in issues of misconduct and integrity in science; the

regulatory experience of human subjects research; and the roles of scientific and engineering societies in fostering research integrity. The panel also considers numerous institutional policy statements adopted by research universities and professional societies that address different aspects of misconduct or integrity in science. These statements have been selected to convey the diverse approaches for addressing such matters within research institutions.

A Survival Guide For Health Research Methods Ross, Tracy, 2012-05-01 This book ultimately aims to answer the questions students have about research in a no nonsense style and can be used as a guide to the main methodologies and tools used in the field.

The Practice of Reproducible Research Justin Kitzes, Daniel Turek, Fatma Deniz, 2018 The Practice of Reproducible Research presents concrete examples of how researchers in the data-intensive sciences are working to improve the reproducibility of their research projects. In each of the thirty-one case studies in this volume, the author or team describes the workflow that they used to complete a real-world research project. Authors highlight how they utilized particular tools, ideas, and practices to support reproducibility, emphasizing the very practical how, rather than the why or what, of conducting reproducible research. Part 1 provides an accessible introduction

to reproducible research, a basic reproducible research project template, and a synthesis of lessons learned from across the thirty-one case studies. Parts 2 and 3 focus on the case studies themselves. The Practice of Reproducible Research is an invaluable resource for students and researchers who wish to better understand the practice of data-intensive sciences and learn how to make their own research more reproducible.

A Review of NASA Human Research Program's Scientific Merit Assessment Processes Institute of Medicine, Board on Health Sciences Policy, Committee on the Review of NASA Human Research Program's Scientific Merit Assessment Processes, 2012-08-20 At the request of NASA, an IOM committee reviewed NASA Human Research Program's (HRP's) Scientific Merit Assessment Processes for directed research. Directed research is commissioned or noncompetitively awarded research that is not competitively solicited because of specific reasons, such as time limitations or highly focused or constrained research topics. The scientific merit assessment processes have been developed by NASA to evaluate individual directed research tasks in order to ensure the scientific integrity of the HRP's directed research portfolio. The committee examined the HRP's current scientific merit assessment processes and conducted a public workshop to identify best practices among other federal agencies that use various assessment processes for similar types of directed research. Review of NASA Human Research Program's Scientific Merit Processes: Letter Report finds that the scientific merit assessment process used by the

HRP for directed research is scientifically rigorous and is similar to the processes and merit criteria used by many other federal agencies and organizations - including the Department of Defense, National Institutes of Health, and the United States Department of Agriculture - for comparable types of research. This report also makes recommendations on ways to streamline and bolster the accountability and transparency of NASA's current processes.
