Brief Group Psychotherapy for Eating Disorders Kate Tchanturia,2015-06-26 In the treatment of Anorexia Nervosa, delivering psychological interventions in a group format can bring unique benefits in addition to those associated with working with patients individually. These include: sharing experiences and learning from others in a safe and therapeutic environment, becoming accustomed to being with other people and practising interpersonal skills. However, these aspects of group treatment also represent a challenge for group facilitators as it is exactly these interpersonal and relational demands that patients find difficult to tolerate. Facilitators are likely to be confronted with low motivation, or complete disengagement, as a result of the discomfort evoked by spending time in psychological groups. Nonetheless, once these difficulties are successfully overcome, the group setting can be effectively utilised to address the specific aims of a given psychological intervention, as well as tapping into these wider benefits Drawing upon research carried out by the Maudsley national inpatient eating disorders programme, Brief Group Psychotherapy for Eating Disorders brings together expert contributions in order to review the evidence base, as well as discussing how the challenges of the group setting can be overcome. This book outlines newly-developed protocols for group interventions aimed at providing brief but effective treatment for an increased numbers of patients, and addresses the need to develop and evaluate cost effective psychological interventions for patients with Anorexia Nervosa. Brief Group Psychotherapy for Eating Disorders is designed to offer therapists, clinicians, and researchers in the field a synopsis of the available evidence along with guidance on how to put theory into practice effectively. It will also be an invaluable resource for students, trainees and teachers in the clinical, counselling, psychology, psychiatry, nursing, occupational therapy and other allied professions.

Motivating Mathematics David Wells,2015-10-15 Motivating Mathematics demonstrates that pupils can be motivated by being given the Big Picture, including a clearer picture of the nature of maths, and by linking topics to the sciences, rather than teaching each topic in isolation. The author emphasises the many virtues of problem-solving, strongly emphasised in secondary education specifications, especially the role of perception, and the ability of pupils to create their own proofs and to appreciate 'cool' ideas and arguments. David Wells draws on his extensive experience of teaching primary and secondary pupils and his understanding not just of how students think about mathematics, but of how they feel about a subject which so often seems merely a collection of facts and rules to be mastered. This book will be of immediate practical use to teachers and students at all levels. Anyone involved in mathematics education will benefit from reading this inspiring book, whether classroom teacher, trainer, teacher in training or professional development, or even parent. The book will also be of interest to policy makers and others with an investment in the future of mathematics education.

Vehicle Compatibility in Automotive Crashes Stanley H Backaitis,2005-03-29 For years, reducing the number of traffic-related fatalities and injuries has been a major problem throughout the world. Today, it has gained much more momentum in view of rapidly increasing SUV, van, and light-truck populations relative to the number of passenger cars, and due to significant improvements in technologies that facilitate a better understanding of the interaction dynamics among widely differing size vehicles. Unless disparities in crashworthiness among vehicles of different masses, sizes, and structural characteristics in mixed crash environments are successfully taken into account, the challenge toward improved vehicle safety will continue. This two-part compendium provides the most comprehensive information available on the entire spectrum of vehicle crash compatibility. The first part presents oral comments captured from the 2003 SAE World Congress panel discussion on compatibility. The panel of leading experts representing industry, academia, and government provides a rough framework and a broad range of views on current and emerging developments in compatibility research. The second part of this compendium features 44 best technical papers from SAE International and the International Technical Conference on the Enhanced Safety of Vehicles, published from the early 1970s through 2004. Readers will get a feel for the direction passenger car and heavy-vehicle manufacturers, research institutions, infrastructure suppliers, insurers, and governments are taking to reduce the number of traffic fatalities and injuries.
