*Becoming the Best* Harry M. Kraemer, 2015-02-11 What does it mean in practice to be a values-based leader? When faced with real situations, how can you be your best self and create best teams—while also being a best partner with customers and vendors, a best investment for your stakeholders, and a best citizen making a difference in the world? It's a tall order, but these are the expectations for world-class organizations today. In his bestselling book *From Values to Action*, Harry Kraemer showed how self-reflection, balance, true self-confidence, and genuine humility are the traits of today's most effective leaders. In *Becoming the Best*, his highly anticipated follow-up, Kraemer reveals how, in practical terms, anyone can apply these principles to become a values-based leader and to help create values-based organizations. Drawing on his own experiences as the former CEO and chairman of Baxter International, as well as those of other notable leaders and organizations, Kraemer lays out a pathway for understanding the principles and putting them into practice, showing specifically, how to:

- Use self-reflection to become your best self as you lead yourself and others more effectively
- Create a best team that understands and appreciates what they're doing, and why
- Forge best partnerships through win/win collaboration with vendors and customers that enhance the end user's experience
- Support the mission, vision, and values of the organization to generate returns that distinguish a best investment
- Make a difference in the world beyond the organization by becoming a best citizen

Powerful case studies from Campbell's Soup, Ernst & Young, Target, Northern Trust, and many others demonstrate the four principles of values-based leadership in action and show how thinking beyond the corporation can trigger positive outcomes for both the company and the world. Regardless of level or job title, individuals can make a difference in their organization and beyond by embodying the essential traits of a great leader. Becoming the Best offers a definitive, actionable guide to show anyone how to apply in practice the principles of values-based leadership personally and professionally, making it an indispensable manual for the new wave of better leaders.

The Healthcare Value Chain Lawton Robert Burns, 2022-10-19 This volume analyzes group purchasing organizations (GPOs) and pharmacy benefit managers (PBMs) in order to better understand the significant roles that these entities play in the healthcare supply chain. It examines who they contract with, on what terms, and who they represent and answer to while charting their historical development. The analysis reveals that the current roles of both players have historical roots that explain why they behave the way they do. Finally, the book reviews the evidence base on the performance results of these two players. This work fills a void in our understanding about two

important and controversial players in the healthcare value chain. Both organizations are cloaked in secrecy – partly by virtue of the private sector contracts they negotiate, partly by virtue of the lack of academic attention. Both play potentially important roles in controlling healthcare costs, albeit using contracting strategies and reimbursement mechanisms that arouse suspicion among stakeholders. This timely text explicates how these organizations arose and evolved to shed more light on how they really operate.

**Repair and Rehabilitation of Dams** James E. McDonald,Nancy F. Curtis,Repair, Evaluation, Maintenance, and Rehabilitation Research Program,Engineer Research and Development Center (U.S.),United States. Army. Corps of Engineers,1999 This study was conducted to identify methods that have been used in the repair and rehabilitation of concrete dams. Information was obtained through literary searches, discussions with project personnel, and visits to project sites. Each case history includes a background of the project, the deficiency that necessitated repair or rehabilitation, and

descriptions of materials and methods used in the repair or rehabilitation. When available, the cost of the repair project and the performance of the repair to date have been included. Case histories included in this report cover a range of deficiencies in concrete structures, including cracking, spalling, erosion, leakage, inadequate PMF capacity, expansion resulting from alkali-aggregate reaction, instability, and insufficient storage capacity.

*Marine Applications of Advanced Fibre-reinforced Composites* Jasper Graham-Jones, John Summerscales, 2015-09-28 The marine environment presents significant challenges for materials due to the potential for corrosion by salt water, extreme pressures when deeply submerged and high stresses arising from variable weather. Well-designed fibre-reinforced composites can perform effectively in the marine environment and are lightweight alternatives to metal components and more durable than wood. *Marine Applications of Advanced Fibre-Reinforced Composites* examines the technology, application and environmental considerations in choosing a fibre-reinforced composite system

for use in marine structures. This book is divided into two parts. The chapters in Part One explore the manufacture, mechanical behavior and structural performance of marine composites, and also look at the testing of these composites and end of life environmental considerations. The chapters in Part Two then investigate the applications of marine composites, specifically for renewable energy devices, offshore oil and gas applications, rigging and sails. Underwater repair of marine composites is also reviewed. Comprehensively examines all aspects of fibre-reinforced marine composites, including the latest advances in design, manufacturing methods and performance. Assesses the environmental impacts of using fibre-reinforced composites in marine environments, including end of life considerations. Reviews advanced fibre-reinforced composites for renewable energy devices, rigging, sail textiles, sail shape optimisation and offshore oil and gas applications.

The 340B Drug Pricing Program Felix C. Larsen, 2020-05-12 The 340B Drug Pricing Program (340B Program) and the Medicaid Drug Rebate Program require manufacturers to provide discounts on outpatient drugs in order to have their drugs covered by Medicaid. These discounts take the form of reduced sales prices for covered entities participating in the 340B Program--eligible hospitals and federal grantees--and rebates on drugs dispensed to Medicaid.

beneficiaries, shared by states and the federal government. This book looks at important issues pertaining to the 340B Drug Pricing Program.

**Gas Turbine Theory** G.F.C. Rogers, Paul Straznicky, H. Cohen, H.I.H. Saravanamuttoo, Andrew Nix, 2017-06-07 When the First Edition of this book was written in 1951, the gas turbine was just becoming established as a powerplant for military aircraft. It took another decade before the gas turbine was introduced to civil aircraft, and this market developed so rapidly that the passenger liner was rendered obsolete. Other markets like naval propulsion, pipeline compression and electrical power applications grew steadily. In recent years the gas turbine, in combination with the steam turbine, has played an ever-increasing role in power generation. Despite the rapid advances in both output and efficiency, the basic theory of the gas turbine has remained unchanged. The layout of this new edition is broadly similar to the original, but greatly expanded and updated, comprising an outline of the basic theory, aerodynamic design of individual components, and the prediction of off-design performance. The addition of a chapter devoted to the mechanical design of gas turbines greatly enhances the scope of the book. Descriptions of engine developments and current markets make this book useful to both students and practising engineers.

**Marine Composites** Richard Pemberton, John Summerscales, Jasper Graham-Jones, 2018-08-20 Marine Composites: Design and Performance presents up-to-date information and recent research findings on the application and use of

advanced fibre-reinforced composites in the marine environment. Following the success of their previously published title: Marine Applications of Advanced Fibre-reinforced Composites which was published in 2015; this exemplary new book provides comprehensive information on materials selection, characterization, and performance. There are also dedicated sections on sandwich structures, manufacture, advanced concepts, naval architecture and design considerations, and various applications. The book will be an essential reference resource for designers, materials engineers, manufactures, marine scientists, mechanical engineers, civil engineers, coastal engineers, boat manufacturers, offshore platform and marine renewable design engineers. Presents a unique, high-level reference on composite materials and their application and use in marine structures Provides comprehensive coverage on all aspects of marine composites, including the latest advances in damage modelling and assessment of performance Contains contributions from leading experts in the field, from both industry and academia Covers a broad range of naval, offshore and marine structures

The Plutonium Files Eileen Welsome, 2010-10-20 When the vast wartime factories of the Manhattan Project began producing plutonium in quantities never before seen on earth, scientists working on the top-secret bomb-building program grew apprehensive. Fearful that plutonium might cause a cancer epidemic among workers and desperate to learn more about what it could do to the human body, the Manhattan Project's medical doctors embarked upon

an experiment in which eighteen unsuspecting patients in hospital wards throughout the country were secretly injected with the cancer-causing substance. Most of these patients would go to their graves without ever knowing what had been done to them. Now, in *The Plutonium Files*, Pulitzer Prize-winning reporter Eileen Welsome reveals for the first time the breadth of the extraordinary fifty-year cover-up surrounding the plutonium injections, as well as the deceitful nature of thousands of other experiments conducted on American citizens in the postwar years. Welsome's remarkable investigation spans the 1930s to the 1990s and draws upon hundreds of newly declassified documents and other primary sources to disclose this shadowy chapter in American history. She gives a voice to such innocents as Helen Hutchison, a young woman who entered a prenatal clinic in Nashville for a routine checkup and was instead given a radioactive cocktail to drink; Gordon Shattuck, one of several boys at a state school for the developmentally disabled in Massachusetts who was fed radioactive oatmeal for breakfast; and Maude Jacobs, a Cincinnati woman suffering from cancer and subjected to an experimental radiation treatment designed to help military planners learn how to win a nuclear war. Welsome also tells the stories of the scientists themselves, many of whom learned the ways of secrecy on the Manhattan Project. Among them are Stafford Warren, a grand figure whose bravado masked a cunning intelligence; Joseph Hamilton, who felt he was immune to the dangers of radiation only to suffer later from a fatal leukemia; and

physician Louis Hempelmann, one of the most enthusiastic supporters of the plan to inject humans with potentially carcinogenic doses of plutonium. Hidden discussions of fifty years past are reconstructed here, wherein trusted government officials debated the ethical and legal implications of the experiments, demolishing forever the argument that these studies took place in a less enlightened era. Powered by her groundbreaking reportage and singular narrative gifts, Eileen Welsome has created a work of profound humanity as well as major historical significance. From the Hardcover edition.

*MagicLand* Charles Bastille, 2021-09-07 "A bracing dystopian tale that deftly mixes magic, evolution, and romance" featuring a wiccan priestess and a humanoid who fall in love against all odds (Kirkus Reviews). A feel-good dystopian novel? Welcome to MagicLand. On a future Earth where magic and

technology have been at war for two thousand years, can one kiss change the fate of the world? When a young actor from Gath, Belex, crash lands outside the magic land known as Moria, he's rescued by a young Morian priestess in waiting, Aurilena. The two find themselves drawn impossibly towards each other in the midst of a war between two distinct species of humanoids: her people, the magicians of Moria, and his people, the Gath, whose tremendous intellectual and physical capabilities are programmed into their DNA. Together, the two discover a terrible secret that lies at the heart of the centuries-old conflict between MagicLand and Gath. It's a secret that leads to a kiss that could end the war once and for all. The only question is will it end in brutal violence or give way to an improbable peace between implacable enemies? The answer to that question may depend on whether Aurilena can discover the true source of power behind her unique gifts before it's too late. "Bastille's debut artfully combines magic, technology, and romance. . . . [He] handles the multilayered plot well, creating a fascinating world populated with empathetic characters." –Publishers Weekly
