Wine Faults: Causes, Effects, Cures John Hudelson, 2010-11-01 A precise and comprehensive description of the problems encountered at times by all winemakers and wine judges, Wine Faults covers the differences between flaws and faults, how flavors develop, how taste works, and how it differs from smell in the evaluation of wine. From there it tackles the increasing problems resulting from high alcohol wines as well as volatile acidity found in high pH wines common in some warm grape-growing regions. It also deals with the vegetal qualities of cool viticultural regions usually caused by methoxypyrazines and the occasional lady beetle. Every microbial infection found in today's wineries is fully described and arrayed in full color slides. Dense as the material may seem, the book is written in a manner that the layperson, or even the quality control professional who forgot that he ever took organic chemistry, can understand.

Fighting Corruption in Asia John Kidd, Frank-Jürgen Richter, 2003-04-03 Fundamental changes within economies are needed to create arm's-length relations between governments, corporations, and

banks. We are taking risks when investing in the future, and risk-taking demands openness and truthfulness from the agents we employ. If investors and accountants can concur on the degree of disclosure that is morally right we may come to some global agreement on what constitutes corruption – but to do this we have to bring together those who advocate profit-making with those who see this as usury; and we have to care for the future in novel ways – unknown in the past – so as to allow firms to be locally inefficient (apparently) while preserving the environment. This book looks widely at the prevailing situation in Asia and considers how little some governments are doing to guide their institutions towards probity and transparency. While fundamental changes are needed around the globe, it is in the developing nations that there is scope for radical change in the near future, as their institutions are re-created to meet the modern world. Once developed and functioning their managers will have the opportunity to facilitate and re-direct the institutions in the developed world, which happen to be more conservative than their own. Contents: The OECD Convention and Asia (E Quinones) The Asian Money Laundering Explosion (P Lilley) Corruption in Context (L Palmier) Monopoly Rights and

Wrongs: Two Forms of Intellectual Property Rights Violations in Asia (H-B Cheah) Culture and Level of Industrialization as Determinants of Corruption in Asia (D Sculli) The Economy of Seepage and Leakage in Asia: The Most Dangerous Issue (G Etienne) Combating Corruption in Southeast Asia (C Wescott) The Nature of Corruption Hidden Culture: The Case of Korea (Y-L Moon & G N McLean) Comparative Study of Anti-Corruption Systems, Efforts and Strategies in Asian Countries: Focusing on Hong Kong, Singapore, Malaysia, and Korea (T Kim) and other papers Readership: Final-year undergraduates, master's and MBA students in ethics and social science; researchers on Asian topics, managers and policy-makers.

Keywords: Corruption; Asia; Government; Institutions; Change Reviews: "The major strength of this book is its comprehensive and diverse nature, providing assessments of corruption in many important areas of Asia ... this volume represents an extremely valuable contribution to our understanding of corruption in Asia and hopefully will be taken seriously by those Asian leaders and policymakers who face the daunting challenge of fighting corruption." The editors focus on the urgency of addressing this global environmental challenge through collaborative efforts and sustainable solutions. This reference features 10 edited chapters covering multiple aspects of microplastic pollution. The book introduces the reader to various tools and

techniques used to analyze microplastic pollution in both aquatic and terrestrial ecosystems. It then examines the sources, pathways, and levels of microplastic contamination in the environment and explains how to assess the potential health risks for the nearby communities. The impact of microplastic on flora and fauna is presented in one chapter. To emphasize the importance of accurate assessment methods in understanding the extent and impact of microplastic contamination. The editors also present a case study conducted in Thoothukudi, South India, to explore the implications of microplastic pollution on human health. The book also provides information on solutions to microplastic pollution including the use of bioplastics and removal techniques. Microplastic Pollution: Causes, Effects, and Control It equips readers with a complete understanding of the global challenge of microplastics, fostering awareness and encouraging further research and action to protect our ecosystems and human health from their detrimental impact. It is an ideal handbook for environmental science researchers and students who need to understand microplastic pollution and plan environmental impact assessments for research projects in academic and professional settings, Key

Computing in Cause–Effect Structures Ludwik Czaja, 2021-11-27 This book focuses on numerous examples of tasks represented by c-e structure. Cause–effect (c-e) structures are dynamic objects devised for algebraic and graphic description of realistic tasks. They constitute a formal system providing means to specify or implement (depending on degree of description generality) the tasks. They can be transformed, thus come under simplification, in accordance with rules-axioms of their algebra. Also, their properties can be inferred from the axioms. One objective of this book is presentation, by many realistic examples, of computing capability of c-e structures, without entering

into mathematical details of their algebra. In particular, how computing with natural numbers and in propositional calculus can be performed by c-e structures and how to specify behavior of data structures. But also demonstration of many other tasks taken from the area of parallel processing, specified as c-e structures. Another objective is modelling or simulation by means of c-e structures, of other descriptive systems, devised for tasks from various fields. Also without formalizing by usage of functions between the systems. This concerns formalisms such as reaction systems, rough sets, Petri nets and CSP-like languages. Also on such, where temporal interdependence between actions matters. The presentation of examples is prevalently graphic, in the form of peculiar nets, but accompanied by their algebraic and set-theoretic expressions. A fairly complete exposition of concepts and properties of the algebra of cause-effect structures is in the previous book appeared in the Lecture Notes in Networks and Systems series. But basic notions of c-e structures are here provided for understanding the examples.

The Book of Why Judea Pearl, Dana Mackenzie, 2018-05-15 A Turing Award-winning computer

scientist and statistician shows how understanding causality has revolutionized science and will revolutionize artificial intelligence Correlation is not causation. This mantra, chanted by scientists for more than a century, has led to a virtual prohibition on causal talk. Today, that taboo is dead. The causal revolution, instigated by Judea Pearl and his colleagues, has cut through a century of confusion and established causality -- the study of cause and effect -- on a firm scientific basis. His work explains how we can know easy things, like whether it was rain or a sprinkler that made a sidewalk wet; and how to answer hard questions, like whether a drug cured an illness. Pearl's work enables us to know not just whether one thing causes another: it lets us explore the world that is and the worlds that could have been. It shows us the essence of human thought and key to artificial intelligence. Anyone who wants to understand either needs The Book of Why.

Changing Plankton Communities: Causes, Effects and Consequences Kristian Spilling, Letizia Tedesco, Riina Klais, Kalle Olli, 2019-10-04 Marine ecosystems are changing at an unprecedented rate. In addition to the direct effects of e.g. warming surface temperatures, the environmental changes also

cause shifts in plankton communities. Plankton makes up the base of the marine food web and plays a pivotal role in global biogeochemical cycles. Any shifts in the plankton community composition could have drastic consequences for marine ecosystem functioning. This Research Topic focuses on causes, effects and consequences of such shifts in the plankton community structure.
