Program Development by Specification and Transformation Bernd Krieg-Brückner, 1993-08-30 This volume gives a coherent presentation of the outcome of the project PROSPECTRA (PROgram development by SPECification and TRANSformation) that aims to provide a rigorous methodology for developing correct software and a comprehensive support system. The results are substantial: a theoretically well-founded methodology covering the whole development

cycle, a very high-level specification and transformation language family allowing meta-program development and formalization of the development process itself, and a prototype development system supporting structure editing, incremental static-semantic checking, interactive context-sensitive transformation and verification, development of transformation (meta-) programs, version management, and so on, with an initial library of specifications and a sizeable collection of implemented transformations. The intended audience for this documentation is the academic community working in this and related areas and those members of the industrial community interested in the use of formal methods.

Using the Schoolwide Enrichment Model With Technology Angela M. Housand, Brian C. Housand, Joseph S. Renzulli, 2021-10-10 Using the Schoolwide Enrichment Model With Technology is an extension of a talent development model implemented in more than 2,500 schools across the U.S.

and widely used internationally. More than 40 years of research and development have documented the effectiveness of the SEM approach to promoting higher level thinking skills and creative productivity. This solution-oriented book, unlike other books focused on using technology in the classroom, recognizes that digital technologies are changing and evolving at lightning speeds. Our effective skills for using technology transcend time by focusing on how to find and use digital resources and tools rather than listing the resources that already exist. Focusing on the skills that support critical thinking and problem solving, decision making, and communication, the authors seamlessly merge technology to launch students toward independent productivity. This accessible and highly practical guide is rich with examples that will change the way you think about education while providing hands-on “how-to” guidance for creating a culture of excellence and innovation in your school and classroom.

Micro Total Analysis Systems 2001 J. Michael Ramsey,Albert van den Berg,2012-12-06 The Fifth International Conference on Micro Total Analysis Systems, also known as JITAS 2001, will highlight the latest exciting events in the world ofminiaturized devices and systems for performing chemical and

biochemical experimentation This conference has become mandatory for those of us working in this field as it is indeed helping to define our discipline. We are grateful to the people of the MESA Research Institute of the University of Twente, particularly Piet Bergveld and Albert van den Berg, for starting this meeting in 1994. Their original intention was for the JITAS meeting to be a small informal workshop. This workshop flavor was sustained through the second meeting held in Basel in 1996, but already in 1998 at the third meeting in Banff it was clear that the workshop had become a conference with 420 attendees. It was due to this clearly growing interest in microchemical systems that it was decided we should consider gradually moving toward an annual format and prepare for the possibility that the meeting would increase in popularity. Albert van den Berg was still yearning for a workshop at the JITAS 2000 meeting and planned a single session format. Again there was a large increase in submitted abstracts (more than 230 total) and a further increase in attendance. The JITAS steering committee again agreed that we would have to prepare to address the demand the meeting was receiving.
