Cell Fusion in Health and Disease Thomas

Dittmar, Kurt S. Zänker, 2011-03-23 Although cell fusion is an omnipresent process in life, to date considerably less is still known about the mechanisms and the molecules being involved in this biological phenomenon in higher organisms. In *Cell Fusion in Health and Disease Vol 1 & Vol 2* leading experts will present up-to-date overviews about cell fusion in physiological and pathophysiological processes, which further covers the current knowledge about cell fusion-mediating molecules. Volume 1 deals with Cell Fusion in Health and will cover aspects of cell fusion in fertilization, placentation, in *C. elegans*, in skeletal muscle development and tissue repair, and the use of cell fusion for cellular reprogramming and cancer vaccine development. Volume 2 focuses on Cell Fusion in Disease with a particular emphasis on the role of cell fusion in cancer development and progression. Thus, *Cell Fusion in Health and Disease Vol 1 & Vol 2* represents a state-of-the-art work for researchers, physicians or professionals being interested in the biological phenomenon of cell fusion and beyond.

Cell Fusion A.E. Sowers, 2013-11-11 Over the last decade the volume *Membrane Fusion*. edited by Poste and Nicholson, has probably served as one of the major sources of review in formation on fusion in membrane systems. Since its publication much new information has been collected. New methods of inducing fusion have been invented or discovered, and new applications for fusion have been found. The need for an up-to-date monograph that covers and integrates these subjects, reviews established material, and rationalizes and integrates the old and the new is thus obvious. This book is the product of efforts to meet this need. Most of the current work in the field of membrane fusion takes place within the context of

intact or modified cells. Hence this book emphasizes the plasma membrane. Each chapter is either a review, a report, or a short historical overview, depending, respectively, on whether the subject is large in scope and has a long history, or the subject is in such an early stage of development that most of what is known is still in the hands of a relatively small number of investigators and is best covered in report form.

Stem Cell Labeling for Delivery and Tracking Using Noninvasive Imaging Dara L.

Kraitchman, Joseph C. Wu, 2011-11-18 *Stem Cell Labeling for Delivery and Tracking Using Noninvasive Imaging* provides a comprehensive overview of cell therapy imaging, ranging from the basic biology of cell therapeutic choices to the preclinical and clinical applications of cell therapy. It emphasizes the use of medical imaging for therapeutic delivery/targeting, cell tracking, and determining therapeutic efficacy. The book first presents background information and insight on the major classes of stem and progenitor cells. It then describes the main imaging modalities and state-of-the-art techniques that are currently employed for stem cell tracking. In the final chapters, leading scholars offer clinical perspectives on existing and potential uses of stem cells as well as the impact of image-guided delivery and tracking in major organ systems. Through clear descriptions and color images, this volume illustrates how noninvasive imaging is used to track stem cells as they repair damaged tissue in the body. With contributions from some of the most prominent preclinical and clinical researchers in the field, the book helps readers to understand the evolving concepts of stem cell labeling and tracking as the field continues to move forward.

Membrane Fusion ,2011-07-25 This volume of

Current Topics in Membranes focuses on Membrane Fusion, beginning with fusion and fission of lipid bilayers, with reviews focused on hemifusion and dynamic remodeling of membranes catalyzed by dynamin. Other topics discussed include viral fusion, intracellular fusion, developmental cell fusion, and theoretical modeling.

Cell Fusion Elizabeth H. Chen, 2008-07-31 In this book a team of leading experts provide a collection of overviews that outline our current understanding of cell fusion. They further provide methods that present classic and state-of-the-art experimental approaches in a variety of systems.

The Drama of love and death 1912 Edward Carpenter, 1912

The Drama of Love and Death Edward Carpenter, 2015-12-22 Love and Death are two major facets of the whole of human existence and in *The Drama of Love and Death*, Carpenter attempts to analyse the interplay of love and death in everyday life. Originally published in 1912, this study focuses on how love and death are perceived and treated in the history of humankind and how these views evolved up until the early twentieth century. This title will be of interest to students of Sociology and Anthropology.

Growth, Nutrition, and Metabolism of Cells In Culture George Rothblat,2012-12-02 Growth, Nutrition, and Metabolism of Cells in Culture, Volume 2, summarizes the state of knowledge of the growth, nutrition, and metabolism of various types of cell cultures. The chapters are both detailed and comprehensive enough for the specialist and broad enough to provide a general background for the nonspecialist. The present volume deals with specialized mammalian, plant, and invertebrate cell systems and techniques. The book begins by tracing the history of the development of tissue culture. This is followed by separate chapters on the use of perfusion systems in cell and tissue culture; and the cultivation of muscle tissue, nerve tissue, and hematopoietic cells. Subsequent chapters discuss the use of cell culture to study mechanisms of hormone action; the cultivation of mammalian embryos; cultivation of cells from poikilothermic vertebrates; and the cultivation of arthropod cells and plant cells. This book will be a valuable resource for investigators who routinely use cell culture techniques, as well as students and individuals in associated areas of cell and molecular biology.

Micro- and Nanosystems for Biotechnology J. Christopher Love, 2016-03-07 Emphasizing their emerging capabilities, this volume provides a strong foundation for an understanding of how micro- and nanotechnologies used in biomedical research have evolved from concepts to working platforms. Volume editor Christopher Love has assembled here a highly interdisciplinary group of authors with backgrounds ranging from chemical engineering right up to materials science to reflect how the intersection of ideas from biology with engineering disciplines has spurred on innovations. In fact, a number of the basic technologies described are reaching the market to advance the discovery and development of biopharmaceuticals. The first part of the book focuses on microsystems for single-cell analysis, examining tools and techniques used to isolate cells from a range of biological samples, while the second part is dedicated to tiny technologies for modulating biological systems at the scale of individual cells, tissues or whole organisms. New tools are described which have a great potential

for (pre)clinical development of interventions in a range of illnesses, such as cancer and neurological diseases. Besides describing the promising applications, the authors also highlight the ongoing challenges and opportunities in the field.
