Research & Innovation Forum 2019 Anna Visvizi, Miltiadis D. Lytras, 2019-10-28 This book features research presented and discussed during the Research & Innovation Forum (Rii Forum) 2019. As such, this volume offers a unique insight into emerging topics, issues and developments pertinent to the fields of technology, innovation and education and their social impact. Papers included in this volume apply inter- and multi-disciplinary approaches to query such issues as technology-enhanced teaching and learning, smart cities,, information systems, cognitive computing and social networking. What brings these threads of the discussion together is the question of how advances in computer science - which are otherwise largely incomprehensible to researchers from other fields - can be effectively translated and capitalized on so as to make them beneficial for society as a whole. In this context, Rii Forum and Rii Forum proceedings offer an essential venue where diverse stakeholders, including academics, the think tank sector and decision-makers, can engage in a meaningful dialogue with a view to improving the applicability of advances in computer science. In brief, Rii Forum takes the imperative inherent in the 4th

industrial revolution seriously, in that it identifies ways of making technology usable and therefore inclusive.

Rebuilding American Military Power in the Pacific Robbin F. Laird,Edward Timperlake,Richard Weitz,2013-10-28 This volume examines how the U.S. military must rebuild in the wake of Iraq/Afghanistan, and refocus its power projection to face the new challenges emerging in the Pacific and with China. Rebuilding American Military Power in the Pacific: A 21st-Century Strategy provides an all-encompassing look at the challenges facing the United States in shaping a 21st-century Pacific strategy: dealing with the growing Chinese colossus, the unpredictable nuclear challenge presented by North Korea, the dynamic of the Arctic opening, and maintaining the security of the conveyor belt of goods and services in the Pacific. Can the United States successfully train and prepare for the 21st century, and break free from the mindset that determined its strategies in the previous century? The authors of the work explain why a carefully considered, fully modernized Pacific strategy is a key element for the evolution of American military power—and why shaping an effective air and maritime strategy in the Pacific as well as globally is the crucial challenge facing the U.S. military and the policy community. Written by authors with significant access to the media, think tanks, and high-level politicians, the book provides an insider's look at how American military leaders are building out relevant capabilities in the Pacific to defend America and its allies, and it contains extensive interviews with those leaders.

Subramanian,Americo Beviglia Zampetti,2004-06-23 The multilateral trading system stands at a crossroads. Despite its widely acknowledged contribution to global prosperity over the past half century, the movement toward further liberalization has increasingly been challenged. These essays by leading scholars and trade officials honor Raymond Vernon, one of the architects of the international economic institutions established following the Second World War. The book examines several key issues at the heart of the debate over the multilateral trading system. What are the global efficiency gains from further liberalization? How can efficiency gains be maximized while respecting legitimate claims to sovereignty? Is the trading system affording an equitable distribution of benefits between countries and among various groups within societies? Does civil society have a role in the trading system? What role should the World Trade Organization and its dispute settlement procedures play in resolving disputes and enhancing legitimacy?

Nephrology Forum J.J. Cohen, J.T. Harrington, J.P. Kassirer, 2012-12-06 A few years ago, as the editor of Kidney International, I was approached by Drs. Cohen, Kassirer, and Harrington who suggested that a new feature should be included in each monthly issue of the journal. They suggested that it should employ a case discussion format such as that used frequently at specialty rounds in teaching hospitals, and that the discussion should place a special emphasis on the relationship between basic science and important problems in clinical nephrology. The summary of an actual patient history would first be presented to exemplify a particular clinical problem, a seasoned person of proven expertise would be invited to deliver a well-documented analysis of the relevant issues, and perhaps most ambitiously of all, a critical audience would be assembled to challenge the principal discussant in an open ended, question-and-answer period. The entire affair would be recorded at the time of the live conference and transcribed subsequently in preparation for publication as a Nephrology Forum. I must confess that I was somewhat hesitant at first to endorse their proposal because, at the time, Kidney International had just begun to establish a solid reputation for the publication of high quality, peer reviewed manuscripts dealing with the clinical and laboratory research interests of the international nephrological community.

Wake,Osamu Saeki,2022-09-10 p= This book is intended for a wide range of researchers both from academia and industry interested in contributing to industries in an interdisciplinary way. The primary industries, including agriculture, fishery, and power industries, are the most fundamental infrastructure of the human societies. Traditionally, primary industries have been managed in the small family/community base, but with increase in population and development of society, the size of primary industry has grown. The efficiency, quality, and stability of these industries affect the societies significantly, so that they have become one of the major areas that mathematics could contribute to substantially. Also, primary industries are affected by the environment, where mathematical studies play an essential role. The conference was hosted by the research community in New Zealand, where such collaborative activities in mathematics between the industry and academia have been successfully established from an early stage. This enabled the conference to bring together a range of research topics- from pioneering works to cutting-edge results, from agriculture to geothermal energy and nuclear fusion, and from mathematical modeling and analysis to data analysis. ^
