Diane MacEachern

\$2.50 A Gallon Newt Gingrich, 2012-05-01 New York Times bestselling author, former Speaker of the House, and Fox News political analyst and Republican presidential candidate Newt Gingrich has a plan for slashing gas prices and reducing our long-term dependence on foreign oil. Gingrich is famous for taking big, visionary ideas and boiling them down into practical solutions for the American people and in his new book, **\$2.50 A Gallon: Why Obama Is Wrong and Cheap Gas Is Possible**, Gingrich tackles America's energy crisis. Dealing not only with spiraling gas prices, but with all aspects of energy policy, Gingrich shows how we can safely reap the benefits of America's own natural resources and technology in gas, oil, coal, wind, solar, biofuels and nuclear energy. Gingrich argues that the pinch Americans are feeling at the pump is not a blip in the economy but a looming crisis—affecting not only the price of gas, but the price of food, the strength of our economy, and our national security. To meet this crisis, Gingrich lays out a national strategy that will tap America's scientists, engineers, and entrepreneurs, and require Congress to unlock our oil reserves and remove all the impediments and disincentives that unnecessary government regulation has put in the way of American energy independence. The energy crisis is solvable, as Newt Gingrich's plan makes clear. His handbook, **\$2.50 A Gallon: Why Obama Is Wrong and Cheap Gas Is Possible**, is sure to become the talk of the presidential campaign season.

Want Cheap Gas? Greg Gebhart, 2012-04-15 Want Cheap Gas? is the complete rationale for using ethanol derived from starch and cellulose to lower gas prices. Already the US produces 15 billion gallons of starch bioethanol per year and by 2022 will be producing the same amount of cellulosic bioethanol. Mixing different amounts of ethanol with pure gasoline will yield E10, E13, and E85. E85 (85% ethanol and 15% gasoline) already sells for \$1.00 less per gallon than E10.

Clean Cheap Heat John H. Herbert, 1992-02-18 This work traces the development of residential natural gas markets in the United States from the beginning of the twentieth century to the present. It examines how social, economic, and technological factors interrelated to bring a relatively new energy source from obscurity to general acceptance by the population. The author credits the appearance of particular appliances which helped spawn natural gas use, notes legislative developments such as the Natural Gas Act of 1938 and the Natural Gas Policy Act of 1978, and shows the various effects of regulation and price changes on the market. The author also demonstrates the use of a general method for performing a regression analysis when the historical data are poorly measured. This study will be of interest to energy economists, econometricians, and industry specialists, as well as economic and social historians.

There are 165 individual stories encompassing the years 1945-2022 and most of what took place in these stories happened in Lancaster County in Southeastern Pennsylvania. Economics of Unconventional Shale Gas Development William E.

Hefley, Yongsheng Wang, 2014-12-03 This book examines the economics and related impacts of unconventional shale gas development. While focusing on the Marcellus and Utica Shales in the Mid-Atlantic region, additional insights from other regions are included to provide a broader view of these issues. Shale gas development in recent years has changed the energy discussion in the US, as existing reserves of natural gas coupled with horizontal drilling and hydraulic fracturing make exploitation of these reserves economically feasible. The importance of natural gas is seen as likely to continue to expand over the coming years, and is expected to increase even further with

environmental considerations, such as greenhouse gas emissions. Horizontal drilling and hydraulic fracturing producing natural gas from deposits such as the Marcellus Shale is making the US a net producer of natural gas. Previous studies have examined the economic impact of exploration and production in the region. Other studies have addressed legal, environmental, biodiversity, and public health impacts of unconventional shale development. This is the first volume to focus solely on the economics and related financial impacts of this development. This book not only fills the research gap, but also provides information that policy makers and the public need to better understand this pressing issue.
