Chess and Checkers : the Way to Mastership Edward Lasker,2022-06-02 A well-written and easy-to-follow beginner's guide to Chess and Checkers by German-American chess and Go player Edward Lasker who FIDE awarded the title of International Master of Chess. In the first section, Lasker attempted to present the principles of chess in a simple way so that anyone can learn and enjoy it without memorizing more than the rules according to which the players move. In explaining the game of Checkers, which is the second part of the book, Lasker has tried to design general principles of strategy instead of offering a mere categorization of the examined lines of play, which the reader would have to remember in order to be able to compete with professionals. Content includes: Introduction The History of Chess the History of Checkers The Game of Chess- The Rules of the Game Elementary Tactics General Principles of Chess Strategy Illustrative Games Problems The Game of Checkers- The Rules of the Game Elementary Tactics The Five Fundamental Positions General Principles and Illustrative Games Problems

Computer-Assisted Language Learning Michael Levy,1997-03-20 Gives a comprehensive overview of the field including historical and interdisciplinary perspectives. Looks at the relationship between the theory and application of Computer-Assisted Language Learning. Describes how the computer is conceptualized as both tutor and tool, and discusses the implications for computer programming, language teaching, and learning. So far the development of Computer-Assisted Language Learning (CALL) has been fragmented. The points of departure for CALL projects have been enormously varied, and when the projects have been written up, they rarely refer to those that have gone before. Michael Levy addresses this shortcoming, setting CALL work into a context, both historical and interdisciplinary. He is the first person in the field to consider CALL as a body of work. He also aims to identify themes and patterns of development that relate contemporary CALL to earlier projects. The author goes on to explore how CALL practitioners have conceptualized the use of the computer in language teaching and learning. He achieves this through a detailed review of the literature, and through the results of an international CALL Survey, where key CALL practitioners from 18 countries respond to questions on aspects of CALL materials development. Drawn from this rich source of information on actual CALL practice, Michael Levy analyses and expands on a tutor-tool framework. He shows this to be of value for a better understanding of methodology, integration of CALL into the curriculum, the role of the teacher and learner, and evaluation.

Modelling Written Communication Deirdre Pratt, 2011-01-19 This book offers an alternative view to current postmodern approaches to composition. It takes a critical realist stance to arrive at the "essence" of written communication with the aim of informing a practical application: a computerised writing tutor. Following Robert Franck's seminal work on modelling, a theoretical model of writing was first formulated, consisting of an architecture of functions which constitute the prerequisites for effective communication. Next, an applied model - a composing algorithm with an input option - was developed, showing composing to be a systemic social process with intra- and extra-systemic variation. The algorithm provided the design template for a writing tutor program which models for the learner both the systemic and the socially situated nature of writing. This book establishes composing as a communicative interaction, and shows the essential dynamism of writing, while offering an exemplar of a systems approach to modelling in the social sciences.

The Little Giant Encyclopedia of Checker Puzzles Robert W. Pike, 2001 Universally popular, checkers is one of the world's oldest and most elegantly structured board games and on a high level, it can demand real strategic thought. Put your skill to the test with these puzzles all based on the Standard American game. (Federation rules appear in their entirety.) Each is solvable in no more than six-and-a-half moves, and sometimes, the winner even seems at a serious disadvantage at the start. Quite a few of the solutions list alternative patterns of play.

Future-proof CALL: language learning as exploration and encounters – short papers from EUROCALL 2018 Peppi Taalas, Juha Jalkanen, Linda Bradley, Sylvie Thouësny, 2018-12-08 The 26th EUROCALL conference was organised by the University of Jyväskylä (JYU) Language Campus and specifically the Language Centre. The theme of this year's conference was 'Future-proof CALL: language learning as exploration and encounters', which reflects an attempt to envision language teaching and learning futures in a changing world. What brought researchers together this year are shared concerns in relation to the sustainability of language learning and teaching in technology-rich contexts that are marked by ever-increasing complexity. The collection of short papers in this volume is a very thorough view into the conference proper exhibiting the complexity and novelty of the field of CALL. There are exciting new openings and a more profound exploration of theoretical underpinnings of the contemporary issues in teaching and learning, cross-cultural communication, mobile learning and the like.

ages—from children to senior citizens—and skill levels, and there are many alternative games to play using a checkers board. Intelligent Language Tutors V. Melissa Holland, Jonathan D. Kaplan, Michelle R. Sams, 2014-01-09 The techniques of natural language processing (NLP) have been widely applied in machine translation and automated message understanding, but have only recently been utilized in second language teaching. This book offers both an argument for and a critical examination of this new application, with an examination of how systems may be designed to exploit the power of NLP, accommodate its limitations, and minimize its risks. This volume marks the first collection of work in the U.S. and Canada that incorporates advanced human language technologies into language tutoring systems, covering languages as diverse as Arabic, Spanish, Japanese, and English. The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer, reader, conversant, and actor in the world. These sections bring together research by specialists in linguistics, artificial intelligence, psychology, instructional design, and language teaching. In addition to providing detailed descriptions of working systems, amply illustrated with screens from lesson and authoring interfaces, the contributors address a spectrum of common issues: * What can current NLP technology contribute to computer-assisted language instruction and to research on language learning? * How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts? * How can designers constrain tutoring environments to ensure accurate analysis of learners' language? * What can NLP-based systems teach us about language acquisition, about linguistic theory, and about theories of language pedagogy? * What lessons have been learned in using these systems to date? Discipline-specific issues are illuminated as well: the relative merits of the major syntactic frameworks for NLP-based language tutoring; the adaptation of theories like lexical conceptual structure to support semantic interpretation; the integration of input language with visual microworlds and dialogue games; the pragmatics of the tutoring discourse; the selection of instructional principles to guide system design; and the accommodation of design to individual differences and learner styles. A concluding section assesses this work from larger theoretical and practical perspectives -- experimental psychology and psycholinguistics, linguistics, language teaching, and second language acquisition research.
