**SVA: The Power of Assertions in SystemVerilog** Eduard Cerny, Surrendra Dudani, John Havlicek, Dmitry Korchemny, 2014-08-23 This book is a comprehensive guide to assertion-based verification of hardware designs using System Verilog Assertions (SVA). It enables readers to minimize the cost of verification by using assertion-based techniques in simulation testing, coverage collection and formal analysis. The book provides detailed descriptions of all the language features of SVA, accompanied by step-by-step examples of how to employ them to construct powerful and reusable sets of properties. The book also shows how SVA fits into the broader System Verilog language, demonstrating the ways that assertions can interact with other System Verilog components. The reader new to hardware verification will benefit from general material describing the nature of design models and behaviors, how they are exercised, and the different roles that assertions play. This second edition covers the features introduced by the recent IEEE 1800-2012. System Verilog standard, explaining in detail the new and enhanced assertion constructs. The book makes SVA usable and accessible for hardware designers, verification engineers, formal verification specialists and EDA tool developers. With numerous exercises, ranging in depth and difficulty, the book is also suitable as a text for students.

*Chess Not Checkers* Mark Miller, 2015-04-06 As organizations grow in volume and complexity, the demands on leadership change. The same old moves won't cut it any more. In Chess Not Checkers, Mark Miller tells the story of Blake Brown, newly appointed CEO of a company troubled by poor

performance and low morale. Nothing Blake learned from his previous roles seems to help him deal with the issues he now faces. The problem, his new mentor points out, is Blake is playing the wrong game. The early days of an organization are like checkers: a quickly played game with mostly interchangeable pieces. Everybody, the leader included, does a little bit of everything; the pace is frenetic. But as the organization expands, you can't just keep jumping from activity to activity. You have to think strategically, plan ahead, and leverage every employee's specific talents—that's chess. Leaders who continue to play checkers when the name of the game is chess lose. On his journey, Blake learns four essential strategies from the game of chess that transform his leadership and his organization. The result: unprecedented performance!

Action Programming Languages Michael Hexmoor, 2022-05-31 Artificial systems that think and behave intelligently are one of the most exciting and challenging goals of Artificial Intelligence. Action Programming is the art and science of devising high-level control strategies for autonomous systems which employ a mental model of their environment and which reason about their actions as a means to achieve their goals. Applications of this programming paradigm include autonomous software agents, mobile robots with high-level reasoning capabilities, and General Game Playing. These lecture notes give an in-depth introduction to the current state-of-the-art in action programming. The main topics are knowledge representation for actions, procedural action programming, planning, agent logic programs, and reactive, behavior-based agents. The only prerequisite for understanding the material in these lecture notes is some general programming experience and basic knowledge of classical first-order logic. **Next Generation Optical Network Design and Modelling** Andrea Bianco, Fabio Neri, 2013-11-11 Optical networks are leaving the labs and becoming a reality. Despite the current crisis of the telecom industry, our everyday life increasingly depends on communication networks for information exchange, medicine, education, data transfer, commerce, and many other endeavours. High capacity links are required by the large internet traffic demand, and optical networks remain one of the most promising technologies for meeting these needs. WDM systems are today widely deployed, thanks to low-cost at extreme data rates and high reliability of optical components, such as optical amplifiers and fixed/tunable filters and transceivers. Access and metropolitan area networks are increasingly based on optical technologies to overcome the electronic bottleneck at the network edge. Traditional multi-layer architectures, such as the widely deployed IP/ATM/SDH protocol stack, are increasingly based on WDM transport; further efforts are sought to move at the optical layer more of the functionalities available today in higher protocol layers. New components and subsystems for very high speed optical networks offer new design opportunities to network operators and designers. The trends towards dynamically configurable all-optical network infrastructures open up a wide range of new network engineering and design choices, which must face issues such as interoperability and unified control and management.
