Red Book 2021 David W. Kimberlin, Elizabeth Barnett, Ruth Lynfield, Mark H. Sawyer, 2021-05-15 The AAP's authoritative guide on preventing, recognizing, and treating more than 200 childhood infectious diseases. Developed by the AAP's Committee on Infectious Diseases as well as the expertise of the CDC, the FDA, and hundreds of physician contributors.

The Childhood Immunization Schedule and Safety Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Assessment of Studies of Health Outcomes Related to the Recommended Childhood Immunization Schedule, 2013-03-27 Vaccines are among the most safe and effective public health interventions to prevent serious disease and death. Because of the success of vaccines, most Americans today have no firsthand experience with such devastating illnesses as polio or diphtheria. Health care providers who vaccinate young children follow a schedule prepared by the U.S. Advisory Committee on Immunization Practices. Under the current schedule, children younger than six may receive as many as 24 immunizations by their second birthday. New vaccines undergo rigorous testing prior to receiving FDA approval; however, like all medicines and medical interventions, vaccines carry some risk. Driven largely by concerns about potential side effects, there has been a shift in some parents' attitudes toward the child immunization schedule. The Childhood Immunization Schedule and Safety identifies research approaches, methodologies, and study designs that could address questions about the safety of the current schedule. This report is the most comprehensive examination of the immunization schedule to date. The IOM authoring committee uncovered no evidence of major safety concerns associated with adherence to the childhood immunization schedule. Should signals arise that there may be need for investigation, however, the report offers a framework for conducting safety research using existing or new data collection systems.

Disease Control Priorities, Third Edition (Volume 2) Robert Black, Ramanan Laxminarayan, Marleen Temmerman, Neff Walker, 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Canadian Immunization Guide Canada. Comité consultatif national de l'immunisation, Canada. National Advisory Committee on Immunization, 2006 The seventh edition of the Canadian Immunization Guide was developed by the National Advisory Committee on Immunization (NACI), with the support of the Immunization and Respiratory Infections Division, Public Health Agency of Canada, to provide updated information and recommendations on the use of vaccines in Canada. The Public Health Agency of Canada conducted a survey in 2004, which confirmed that the Canadian Immunization Guide is a very useful and reliable resource of information on immunization.

Immunization Safety Review Institute of Medicine, Board on Health Promotion and Disease Prevention, Immunization Safety Review Committee, 2004-02-20 Infection with the influenza virus can have a serious effect on the health of people of all ages, although it is particularly worrisome for infants, the elderly, and people with underlying heart or lung problems. A vaccine exists (the flu shot) that can greatly decrease the impact of influenza. Because the strains of virus that are expected to cause serious illness and death are slightly different every year, the vaccine is also slightly different every year and it must be given every year, unlike other vaccines. The Immunization Safety Review committee reviewed the data on influenza vaccine and neurological conditions and concluded that the evidence favored rejection of a causal relationship between influenza vaccines and exacerbation of multiple sclerosis. For the other neurological conditions studied, the committee concluded the evidence about the effects of influenza vaccine is inadequate

to accept or reject a causal relationship. The committee also reviewed theories on how the influenza vaccine could damage the nervous system. The evidence was at most weak that the vaccine could act in humans in ways that could lead to these neurological problems.

Immunization Safety Review Institute of Medicine, Board on Health Promotion and Disease Prevention, Immunization Safety Review Committee, 2002-07-02 By two years of age, healthy infants in the United States can receive up to 20 vaccinations to protect against 11 diseases. Although most people know that vaccines effectively protect against serious infectious diseases, approximately one-quarter of parents in a recent survey believe that infants get more vaccines than are good for them, and that too many immunizations could overwhelm an infant's immune system. The Immunization Safety Review Committee reviewed the evidence regarding the hypothesis that multiple immunizations increase the risk for immune dysfunction. Specifically, the committee looked at evidence of potential biological mechanisms and at epidemiological evidence for or against causality related to risk for infections, the autoimmune disease type 1 diabetes, and allergic disorders.

The Vaccine-Friendly Plan Paul Thomas, M.D., Jennifer Margulis, Ph.D., 2016-08-23 An accessible and reassuring guide to childhood health and immunity from a pediatrician who's both knowledgeable about the latest scientific research and respectful of a family's risk factors, health history, and concerns In The Vaccine-Friendly Plan, Paul Thomas, M.D., presents his proven approach to building immunity: a new protocol that limits a child's exposure to aluminum, mercury, and other neurotoxins while building overall good health. Based on the results from his pediatric practice of more than eleven thousand children, as well as data from other credible and scientifically minded medical doctors, Dr. Paul's vaccine-friendly protocol gives readers • recommendations for a healthy pregnancy and childbirth • vital information about what to expect at every well child visit from birth through adolescence • a slower, evidence-based vaccine schedule that calls for only one aluminum-containing shot at a time • important questions to ask about your child's first few weeks, first years, and beyond • advice about how to talk to health care providers when you have concerns • the risks associated with opting out of vaccinations • a practical approach to common illnesses throughout the school years • simple tips and tricks for healthy eating and toxin-free living at any age The Vaccine-Friendly Plan presents a new standard for pediatric care, giving parents peace of mind in raising happy, healthy children. Praise for The Vaccine-Friendly Plan "Finally, a book about vaccines that respects parents! If you choose only one book to read on the topic, read The Vaccine-Friendly Plan. This impeccably researched, well-balanced book puts you in the driver's seat and empowers you to make conscientious vaccine decisions for your family."—Peggy O'Mara, editor and publisher, Mothering Magazine "Sure to appeal to readers of all kinds as a friendly, no-nonsense book that cuts through the rhetoric surrounding vaccines. It offers validation to those who avoid

some or all, while offering those who do want to vaccinate help on how to do so safely. This is a great book for anyone with children in their lives.”—Natural Mother “A valuable, science-supported guide to optimizing your child’s health while you navigate through complex choices in a toxic, challenging world.”—Martha Herbert, M.D., Ph.D., Harvard Medical School “An impressively researched guide, this important book is essential reading for parents. With clear and practical advice for shielding children from harmful toxins, it will compel us all to think differently about how to protect health.”—Jay Gordon, M.D., FAAP “Rather than a one-size-fits-all vaccine strategy, the authors suggest thoughtful, individualized decisions based on research and collaboration between parents and clinicians—a plan to optimize a child’s immune system and minimize any risks.”—Elizabeth Mumper, M.D., founder and CEO, The Rimland Center for Integrative Pediatrics “This well-written and thought-provoking book will encourage parents to think through decisions—such as food choices and the timing of vaccines—that affect the well-being of their children. In a world where children’s immune systems are increasingly challenged, this is a timely addition to the literature.”—Harriet Lerner, Ph.D., bestselling author of *The Dance of Anger* and *The Mother Dance*

Disease Control Priorities, Third Edition (Volume 8) Donald A. P. Bundy,Nilanthi de Silva,Susan Horton,Dean T. Jamison,2017-11-20 More children born today will survive to adulthood than at any time in history. It is now time to emphasize health and development in middle childhood and adolescence--developmental phases that are critical to health in adulthood and the next generation. Child and Adolescent Health and Development explores the benefits that accrue from sustained and targeted interventions across the first two decades of life. The volume outlines the investment case for effective, costed, and scalable interventions for low-resource settings, emphasizing the cross-sectoral role of education. This evidence base can guide policy makers in prioritizing actions to promote survival, health, cognition, and physical growth throughout childhood and adolescence.
