The Childhood Immunization Schedule and Safety Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Assessment of Studies of Health Outcomes Related to the Recommended Childhood Immunization Schedule, 2013-04-27 Vaccines are among the most safe and effective public health interventions to prevent serious disease and death. Because of the success of vaccines, most Americans today have no firsthand experience with such devastating illnesses as polio or diphtheria. Health care providers who vaccinate young children follow a schedule prepared by the U.S. Advisory Committee on Immunization Practices. Under the current schedule, children younger than six may receive as many as 24 immunizations by their second birthday. New vaccines undergo rigorous testing prior to receiving FDA approval; however, like all medicines and medical interventions, vaccines carry some risk. Driven largely by concerns about potential side effects, there has been a shift in some parents' attitudes toward the child immunization schedule. The Childhood Immunization Schedule and Safety identifies research approaches, methodologies, and study designs that could address questions about the safety of the current schedule. This report is the most comprehensive examination of the immunization schedule to date. The IOM authoring committee uncovered no evidence of major safety concerns associated with adherence to the childhood immunization schedule. Should signals arise that there may be need for investigation, however, the report offers a framework for conducting safety research using existing or new data collection systems.

Maternal Immunization Elke Leuridan, Marta Nunes, Chrissie Jones, 2019-11-26 Immunization during pregnancy with currently recommended vaccines prevents infection in the mother, the unborn fetus, and the young infant, and there is an increasing focus from different stakeholders to use this approach for other infections of importance to protect these vulnerable groups. The aim of this Maternal Immunization book is to provide a contemporary overview of vaccines used in pregnancy (and the lactation period), with emphasis on aspects of importance for the target groups, namely, rationale for the use of vaccines in pregnancy, safety, immunogenicity (immunology), timing to vaccinate, repeat doses, protective effects in the mother, fetus, and infant, and public acceptance and implementation, of existing and of future vaccines. Provides an overview of a quickly evolving topic. This will benefit the reader who wishes to rapidly become informed and up-to-date with new developments in this field Suitable to a broad audience: scientific researchers, obstetricians, gynecologists, neonatologists, vaccinators, pediatricians, students, and industry. Maternal vaccination impacts a wide range of specialists Allows health care professionals/researchers to gain insight into other aspects of vaccination in pregnancy outside of their specialism Is coauthored by specialists from multiple disciplines, providing a diverse view of the subject, increasing its interest and appeal Creates awareness of the current developments in this area of medicine and of the potential of maternal vaccination to improve the health of mothers and infants worldwide

Financing Vaccines in the 21st Century Institute of Medicine, Board on Health Care Services, Committee on the Evaluation of Vaccine Purchase Financing in the United States, 2003-12-10 The national immunization system has achieved high levels of immunization, particularly for children. However, this system faces difficult challenges for the future. Significant disparities remain in assuring access to recommended vaccines across geographic and demographic

populations. These disparities result, in part, from fragmented public&private financing in which a large number of children and adults face limited access to immunization services. Access for adults lags well behind that of children, and rates of immunizations for those who are especially vulnerable because of chronic health conditions such as diabetes or heart and lung disease, remain low. *Financing Vaccines in the 21st Century: Assuring Access and Availability* addresses these challenges by proposing new strategies for assuring access to vaccines and sustaining the supply of current and future vaccines. The book recommends changes to the Advisory Committee on Immunization Practices (ACIP)-the entity that currently recommends vaccines-and calls for a series of public meetings, a post-implementation evaluation study, and development of a research agenda to facilitate implementation of the plan.

Disease Control Priorities, Third Edition (Volume 2) Robert Black, Ramanan Laxminarayan, Marleen Temmerman, Neff Walker, 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

The Vaccine-Friendly Plan Paul Thomas, M.D., Jennifer Margulis, Ph.D., 2016-08-23 An accessible and reassuring guide to childhood health and immunity from a pediatrician who's both knowledgeable about the latest scientific research and respectful of a family's risk factors, health history, and concerns In *The Vaccine-Friendly Plan*, Paul Thomas, M.D., presents his proven approach to building immunity: a new protocol that limits a child's exposure to aluminum, mercury, and other neurotoxins while building overall good health. Based on the results from his pediatric practice of more than eleven thousand children, as well as data from other credible and scientifically minded medical doctors, Dr. Paul's vaccine-friendly protocol gives readers • recommendations for a healthy pregnancy and childbirth • vital information about what to expect at every well child visit from birth through adolescence • a slower, evidence-based vaccine schedule that calls for only one aluminum-containing shot at a time • important questions to ask about your child's first few weeks, first years, and beyond • advice about how to talk to health care providers when you have concerns • the risks associated with opting out of vaccinations • a practical approach to common illnesses throughout the school years • simple tips and tricks for healthy eating and toxin-free living at any age *The Vaccine-Friendly Plan* presents a new standard for pediatric care, giving parents peace of mind in raising happy, healthy children. Praise for *The Vaccine-Friendly Plan* "Finally, a book about vaccines that respects parents! If you choose only one book to read on the topic, read *The Vaccine-*

Friendly Plan. This impeccably researched, well-balanced book puts you in the driver's seat and empowers you to make conscientious vaccine decisions for your family."—Peggy O'Mara, editor and publisher, *Mothering Magazine* "Sure to appeal to readers of all kinds as a friendly, no-nonsense book that cuts through the rhetoric surrounding vaccines. It offers validation to those who avoid some or all, while offering those who do want to vaccinate help on how to do so safely. This is a great book for anyone with children in their lives."—Natural Mother "A valuable, science-supported guide to optimizing your child's health while you navigate through complex choices in a toxic, challenging world."—Martha Herbert, M.D., Ph.D., Harvard Medical School "An impressively researched guide, this important book is essential reading for parents. With clear and practical advice for shielding children from harmful toxins, it will compel us all to think differently about how to protect health."—Jay Gordon, M.D., FAAP "Rather than a one-size-fits-all vaccine strategy, the authors suggest thoughtful, individualized decisions based on research and collaboration between parents and clinicians—a plan to optimize a child's immune system and minimize any risks."—Elizabeth Mumper, M.D., founder and CEO, The Rimland Center for Integrative Pediatrics "This well-written and thought-provoking book will encourage parents to think through decisions—such as food choices and the timing of vaccines—that affect the well-being of their children. In a world where children's immune systems are increasingly challenged, this is a timely addition to the literature."—Harriet Lerner, Ph.D., bestselling author of *The Dance of Anger* and *The Mother Dance*

Immunization Safety Review Institute of Medicine,Board on Health Promotion and Disease Prevention,Immunization Safety Review Committee,2002-07-02 By two years of age, healthy infants in the United States can receive up to 20 vaccinations to protect against 11 diseases. Although most people know that vaccines effectively protect against serious infectious diseases, approximately one-quarter of parents in a recent survey believe that infants get more vaccines than are good for them, and that too many immunizations could overwhelm an infant's immune system. The Immunization Safety Review Committee reviewed the evidence regarding the hypothesis that multiple immunizations increase the risk for immune dysfunction. Specifically, the committee looked at evidence of potential biological mechanisms and at epidemiological evidence for or against causality related to risk for infections, the autoimmune disease type 1 diabetes, and allergic disorders.

Adverse Events Associated with Childhood Vaccines Institute of Medicine,Vaccine Safety Committee,1993-01-01 Childhood immunization is one of the major public health measures of the 20th century and is now receiving special attention from the Clinton administration. At the same time, some parents and health professionals are questioning the safety of vaccines because of the

occurrence of rare adverse events after immunization. This volume provides the most thorough literature review available about links between common childhood vaccines—tetanus, diphtheria, measles, mumps, polio, Haemophilus influenzae b, and hepatitis B—and specific types of disorders or death. The authors discuss approaches to evidence and causality and examine the consequences—neurologic and immunologic disorders and death—linked with immunization. Discussion also includes background information on the development of the vaccines and details about the case reports, clinical trials, and other evidence associating each vaccine with specific disorders. This comprehensive volume will be an important resource to anyone concerned about the immunization controversy: public health officials, pediatricians, attorneys, researchers, and parents.

The Children's Vaccine Initiative Institute of Medicine, Committee on the Children's Vaccine Initiative: Planning Alternative Strategies, 1993-02-01 The Children's Vaccine Initiative is an international endeavor to ensure that children throughout the world are immunized. This book notes that one of the best opportunities to address the growing problem of immunization in the United States and to improve the health of children in developing countries lies in marshaling the vaccine development and production efforts in the United States and abroad. The book contains information on the nature and status of vaccine development and production efforts in the United States and abroad, and it recommends ways to enhance participation in the International Children's Vaccine Initiative.

It is now time to emphasize health and development in middle childhood and adolescence--developmental phases that are critical to health in adulthood and the next generation.
