Heteroatom Manipulation E. Winterfeldt,1992-09-08 In this volume, those functional groups containing heteroatoms that have gained importance in organic synthesis are dealt with in detail. The introduction of these various groups and their relevant transformations are described and the various aspects of chemoselectivity, regioselectivity and stereoselectivity are discussed. After a compilation of the synthetically most useful substitution processes, there is a series of chapters on the various types of acylation reactions and in this context the different methods of acyl group activation are discussed. As functional group protection is of very general importance for organic synthesis, a corresponding chapter is included. This is followed by a section on the preparation of carbonyl derivatives and the most important transformations and rearrangements of functional group derivatives. At the end of the volume one finds chapters on all types of elimination reactions and related thermal reactions together with a survey on fragmentation processes in organic synthesis.

Labor and Material Requirements for Civil Works Construction by the Corps of Engineers Roland Vinton Murray,1964 New construction is a major component of the Nation's output of goods and services and an important source of employment. It creates jobs not only at the project sites, but also in the many manufacturing, trade, and transportation industries which furnish materials and equipment required in the construction processes. The Bureau of Labor Statistics has undertaken a series of studies to measure these labor requirements for various types of construction. The program of civil works construction under the Corps of Engineers--the construction of facilities such as dams, levees, dikes, and channels to control and develop the Nation's water resources--was chosen for early study because of the size of the program, because it is representative of an important part of heavy construction, and because it is the type of program frequently envisioned when public works construction is under consideration as a means of counteracting cyclical unemployment.
