*Technomobility in China* Cara Wallis, 2015-03-06 Winner of the 2014 Bonnie Ritter Book Award Winner of the 2013 James W. Carey Media Research Award As unprecedented waves of young, rural women journey to cities in China, not only to work, but also to “see the world” and gain some autonomy, they regularly face significant institutional obstacles as well as deep-seated anti-rural prejudices. Based on immersive fieldwork, Cara Wallis provides an intimate portrait of the social, cultural, and economic implications of mobile communication for a group of young women engaged in unskilled service work in Beijing, where they live and work for indefinite periods of time. While simultaneously situating her work within the fields of feminist studies, technology studies, and communication theory, Wallis explores the way in which the cell phone has been integrated into the transforming social structures and practices of contemporary China, and the ways in which mobile technology enables rural young women—a population that has been traditionally marginalized and deemed as “backward” and “other”—to participate in and create culture, allowing them to perform a modern, rural-urban identity. In this theoretically rich and empirically grounded analysis, Wallis provides original insight into the co-construction of technology and subjectivity as well as the multiple forces that shape contemporary China.

**Alphabet** Micky Lee, 2019-05-14 Google is synonymous with searching, but in this innovative new research volume, Micky Lee explores how the Alphabet Corporation, now the parent company of Google, is more than just a search engine. Using a political economic approach, Lee draws on the concept of networks to investigate the growth of this key media player. The establishment of the parent company, Alphabet, shows the company is expanding to other industries from equity investment to self-driving cars. This book first examines this history of expansion, before delving into the economic, political, and cultural profiles of the corporation. Lee ultimately finds that what makes Google powerful is not one genius idea, but rather networks of people, places, and capital. *Alphabet: The Becoming of Google* is a compelling dive into the sometimes inscrutable world of Google, ideal for students, scholars, and researchers interested in the fields of digital media studies, the politics and economies of online media, and the history of the internet.

**Decoding China's Export Miracle: A Global Value Chain Analysis** Yuqing Xing, 2021-03-17 In less than three decades, China has emerged as the world's largest exporting nation with more than \$2 trillion exports annually. China's quick rise as a leading exporter in the world is an unprecedented miracle. There are many theories explaining this miracle. This book adopts the global value chain (GVC) approach to analyze the Chinese export miracle over the last four decades. It focuses on the tasks rather than the gross export value and emphasizes the organizations of modern trade rather than the national comparative advantage. The GVC approach systematically explains how, in less than four decades China has evolved from a closed economy to the world's No. 1 exporting nation; why China, a developing country, has exported more high-technology products than labor-intensive products to the US; and why almost half of the US trade deficit has originated from China. The book identifies three spillover effects of GVCs that originated from brands, technology and product innovation, and distribution and retail networks of GVCs lead firms. It argues that China's deep integration with GVCs has been a decisive factor for China's emergence as the world's No.1 exporting nation and the champion of high-technology exports. In addition, this book uses iPhone trade and the operation of Apple, the largest factory-less American manufacturer, to explain how current trade statistics exaggerate China's exports to and its trade surplus with the US on the one hand, and underestimate US exports on the other hand. By using the experience of the Chinese mobile phone industry, the book argues that the GVC strategy can be a short-cut for developing countries to achieve industrialization and enable firms of developing countries to enter high-technology sectors despite their intrinsic disadvantages. At this end, the book also discusses the future trajectory of China-centered GVCs under the shadow of the US-China trade war and the COVID-19 pandemic.

*The China Paradox* Paul G. Clifford, 2017-10-23 Featured as Book of the Week by The Wire China in August 2020! If your business has anything to do with China or you simply seek to understand the rise of China, you need to read this book. In *The China Paradox*, business strategist and historian Dr. Paul G. Clifford uses vivid examples from his deep experience in China to lay bare the delicate and fragile balance of forces which lie at the heart of China's success. He explains how, against all the odds, the ruling Communist Party boldly led the economic reforms as the surest way to preserve their grip on power. This flourishing of China's hybrid developmental model is placed firmly in the historical context, shedding light on the legacies that thwarted earlier attempts at change and which today still threaten to render the progress unsustainable. China is taking its place on the world economic stage, displaying business acumen and innovation. But China's un-reformed political governance, coupled with the challenges resulting from breakneck growth, may hamper the nation's ability to realize its potential and impact its longer-term prospects. This book is for anyone who needs to understand how China competes, anyone with business or other affairs in China, and anyone involved in foreign trade will benefit from this book. **Digital China's Informal Circuits** Elaine Jing Zhao, 2019-02-11 From open source cultures, piracy, to amateur media and on-demand labour, informal media activities are vibrant in circuits of cultural production, distribution, consumption and labour utilisation in China. They come in different sizes and shapes, involve multiple actors, often with transnational ties and tensions, and challenge polemic views. Why do these informal activities occur, and how do they evolve? What cultural and social consequences do they have? In what ways do they pose challenges to governance and provoke us to rethink the notion? This book engages with diverse forms of the informal and their equally diverse interactions with the formal in the broader context of the rise of digital platforms, the contingent and complicated state-market interactions, and evolving roles of users. The book provides a vivid and original account of how digital platforms navigate formal and informal boundaries at both operational and discursive levels; how enthusiastic fans, aspiring amateurs, 'ordinary' users and necessity-driven labourers become integral to the formal/informal interface; and how state and non-state actors intervene in governing the formal/informal dynamics. In doing so, the book opens up new insights into the ongoing digital transformation in China.

**China-Selling to the Mobile Digital Dragon**,

*The Global Smart Phone Revolution*,

**The Mobile Revolution: Role of China**,

Mobile Tech Report 2015 John R. Roberts, 2015-02-23 If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2014 and make predictions on what will and won't happen in 2015. You can read what did happen in the mobile technology in 2014. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love

the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2015 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2014 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters.

*Concise Encyclopedia of Green Technology in China* Nancy Y. Liu-Sullivan, Lawrence R. Sullivan, 2023 Concise Encyclopedia of Green Technology in China documents the dramatic shifts in environmental policy and practice in China, with development of the rich varieties of green technology from eye-catching EVs to mundane systems of converting the enormous wastes produced by a population of 1.4 billion people--

*Global Capitalism, Culture, and Ethics* Richard A. Spinello, 2014-04-24 Selected as an Outstanding Academic Title by Choice Magazine in 2014! This book aims to deepen the student's understanding of the complex ethical challenges that businesses face in an increasingly globalized world. As the world moves towards greater interdependence, it has been demonstrated that globalization is linked to economic growth. This raises a critical question: as a key player in fostering economic growth, how does the multinational corporation function as a moral agent? *Global Capitalism, Culture, and Ethics* offers a sophisticated analysis of theoretical ethical issues such as universalism versus pluralism; the connection between law and morality; the validity of a corporate social agenda; and the general parameters of moral responsibilities for multinational corporations. With these foundational issues addressed, the book proceeds to analyze a number of specific controversies such as the proper scope of political activism, disinvestment, environmental sustainability, and responsible sourcing from low wage countries. The analysis of globalization is not confined to a treatment of the moral obligations of multinational corporations, but also reviews the history of global capitalism, the interdependence between governments and multinational corporations, and the beneficial and harmful effects of globalization on social welfare. Weaving together themes from economics, history, philosophy, and law, this book allows the reader to appreciate globalization from multiple perspectives. Its theoretical cogency and uncompromising clarity make it a rewarding read for students interested in issues of ethics and globalization.

**The Economics of Digital Transformation** Katarzyna Śledziowska, Renata Włoch, 2021-08-01 The unprecedented Covid-19 crisis revealed the scale and scope of a new type of economy taking shape in front of our very eyes: the digital economy. This book presents a concise theoretical and conceptual framework for a more nuanced analysis of the economic and sociological impacts of the technological disruption that is taking place in the markets of goods and services, labour markets, and the global economy more generally. This interdisciplinary work is a must for researchers and students from economics, business, and other social science majors who seek an overview of the main digital economy concepts and research. Its down-to-earth approach and communicative style will also speak to businesses practitioners who want to understand the ongoing digital disruption of the market rules and emergence of the new digital business models. The book refers to academic insights from economics and sociology while giving numerous empirical examples drawn from basic and applied research and business. It addresses several burning issues: how are digital processes transforming traditional business models? Does intelligent automation threaten our jobs? Are we reaching the end of globalisation as we know it? How can we best prepare ourselves and our children for the digitally transformed world? The book will help the reader gain a better understanding of the mechanisms behind the digital transformation, something that is essential in order to not only reap the plentiful opportunities being created by the digital economy but also to avoid its many pitfalls. Chapters 1, 3 and 5 of this book are available for free in PDF format as Open Access from the individual product page at [www.routledge.com](http://www.routledge.com). They have been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

*Political Developments in Contemporary China* Ian Jeffries, 2010-07-23 China's role in global events today cannot be overestimated. This book provides a comprehensive and detailed overview of contemporary political developments in China. Key topics covered include: China's international relations with its neighbours and with the international community more widely; demographic developments; Taiwan; Macao and Hong Kong, Tibet, Uighurs; human rights, health issues (including bird flu); food contamination and defective goods; and a chronology of political developments, congresses and Central Committee sessions since May 2006; the earthquake of 12 May 2008 and the 2008 Olympic Games. The book continues - and adds to - the overview of developments up to May 2006 which were covered in the author's *China: A Guide to Economic and Political Developments* (2006), and is the companion volume to *Economic Developments in Contemporary China: A Guide* (2010) - both published by Routledge.

**Inside the New China** Gene Ayres, China is no longer a Third World country. It is now the world's fastest growing economy. Even after the 2008 Olympics, this fact may come as a shock to many Americans, who continue to think that the Chinese still march around in brown uniforms with red stars on their caps arresting dissidents for wearing capitalist Levis. China has at last count, more than half a billion cell phone users. Indeed, the Chinese are not only the world's leading users of mobile phones, but also the leading suppliers. No Chinese student goes without one and even a donkey cart driver chatting away on a mobile is not an uncommon sight. China's educated New Generation is possibly the most highly motivated force since the post-World War II generation in America. The young people of China are the next wave of a flourishing Chinese middle class now estimated as 13.5 % of the population, and expected to be 600

million strong by 2015, according toBusiness Week. These young people want to drive cars like ours, live in houses like ours, own condos near the beach, wear designer clothes, and carry cell phones, iPods, camcorders, digital cameras, and MP3 players, just like Americans. Tens of millions already do. During a thirty-month stay in China around 2008, Ayres was presented to soldiers straight out of boot camp, toasted by military generals and governors, invited to parties with local leaders as a foreign expert and dignitary, and begged to counsel dissidents and the lovelorn. He rode buses jammed with peasants hoping that they would actually be paid at the end of the month. He dickered with farmers in open markets and street vendors desperate to make ends meet. He dealt with smooth, savvy merchants in upscale department stores; and debated policy with Communist Party bosses. This revised paperback edition of the author's earlier work, A Billion to One, is a vivid, intimate account of China as it is today.

The Challenge of Sustainability John Zinkin,2020-08-10 The Challenge of Sustainability: Corporate Governance in a Complicated World reviews the evolution of five types of corporate governance and their different sustainability objectives. It discusses the challenges for boards in achieving sustainability from an environmental, economic, employment, and social perspective and introduces the concept of a political tragedy of the commons if boards do what is in the best interests of their profitability only, without considering their responsibilities and unintended consequences for their stakeholders. It explains how volatility, uncertainty, complexity, and ambiguity complicate making sustainable decisions. This book explores ways of helping prevent such negative outcomes. John Zinkin asserts the director’s need to reconcile volatility with vision, uncertainty with understanding, complexity with courage and commitment, and ambiguity with adaptability. To prevent a potential political tragedy of the commons, the book suggests new decision-making processes; treating employees differently; and makes the case for reforming capitalism. It is aimed at managers, board members and all those who influence them, including shareholder activists, corporate legal personnel, politicians, activists and general readers interested in applying some of these suggestions in their roles as stakeholders, managers and directors.
