Leveraging Applications of Formal Methods, Verification and Validation: Tools and Trends
Tiziana Margaria, Bernhard Steffen, 2021-08-04 The four-volume set LNCS 12476 - 12479 constitutes the refereed proceedings of the 9th International Symposium on Leveraging Applications of Formal Methods, ISoLA 2020, which was planned to take place during October 20-30, 2020, on Rhodes, Greece. The event itself was postponed to 2021 due to the COVID-19 pandemic. The papers presented were carefully reviewed and selected for inclusion in the proceedings. Each volume focusses on an individual topic with topical section headings within the volume: Part I, Verification Principles: Modularity and (De-)Composition in Verification; X-by-Construction: Correctness meets Probability; 30 Years of Statistical Model Checking; Verification and Validation of Concurrent and Distributed Systems. Part II, Engineering Principles: Automating Software Re-Engineering; Rigorous Engineering of Collective Adaptive Systems. Part III, Applications: Reliable Smart Contracts: State-of-the-art, Applications, Challenges and Future Directions; Automated Verification of Embedded Control Software; Formal methods for DIsTributed COmputing in future RAILWay systems. Part IV, Tools and Trends: From Verification to Explanation; Engineering of Digital Twins for Cyber-Physical Systems; Software Verification Tools.

Electric Utility Resource Planning Joe Ferrari, 2020-09-09 Electric Utility Resource Planning: Past, Present and Future covers the balance of renewable costs, energy storage, and flexible backstop mechanisms needed in electric utility resource planning. In addition, it covers the optimization of planning methodologies and market design. The book argues that net load, ramping

and volatility concerns associated with renewables call into question the validity of almost a century of planning approaches. Finally, it suggests that accounting for flexibility helps optimize the efficiency of the entire fleet of assets, minimizing costs and CO2 generation simultaneously, concluding that a flexible, independent backstop mechanism is needed, regardless of renewables or storage. Case studies provide a mix of hypothetical what if scenarios and analyses of real-life utility portfolios drawn from international examples. Examines how resource planners and policy specialists can plan to incorporate renewable generation technologies, thus uniting considerations of technology, methodology, business and policy Focuses on the reality of long-term decision-making and planning processes in working utilities Reviews novel approaches towards resource planning that yield lower costs and CO2 Emphasizes the need for flexible backstop mechanisms to maintain reliability

Petri Nets in Science and Engineering Raul Campos-Rodriguez,Mildreth Alcaraz-Mejia,2018-09-19 This book presents a collection of chapters from different areas of science and engineering, where Petri Nets have been shown to be a useful tool for the design and modeling of the problems that arise in such fields. The areas covered in this book include manufacturing systems, authentication and cyber-security, computer architectures, mechanical systems, process mining, control theory and time analysis. The main focus of the chapters was to be illustrative, to

help the development of intuitive ideas that may guide the reader to adopt Petri Nets in their scientific or engineering work. However, there are other chapters with deep mathematical basis such as time analysis. Whenever possible, models, graphics and examples illustrate the developed concepts.

Principles of Sedimentary Basin Analysis Andrew Miall, 2013-04-17 This book is intended as a practical handbook for those engaged in the task of analyzing the paleogeographic evolution of ancient sedimentary basins. The science of stratigraphy and sedimentology is central to such endeavors, but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods. Sedimentology textbooks tend to take a theoretical approach, building from physical and chemical theory and studies of modern environments. It is commonly difficult to apply this information to practical problems in ancient rocks, and very little guidance is given on methods of observation, mapping and interpretation. In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops, well records, and cores, and what can be obtained using geophysical techniques. A new approach is taken to stratigraphy, which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming. There are also sections explaining principles of facies analysis, basin mapping methods, depositional systems, and the study of basin thermal history, so important to the genesis of fuels and minerals. Lastly, an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes.

History of Padang Lawas 1 Cahier d'Archipel 42,2014-04-30 For the last century and a half, the name of Padang Lawas, in the present province of North Sumatra, Indonesia, has been associated with a number of isolated Hindu- Buddhist remains located in the middle of the island. These remains are all the more remarkable because they form the largest Indianized archaeological complex yet to be seen in the northern half of Sumatra. This book is the latest contribution to the accumulation of knowledge on the ancient history of Padang Lawas. The fifteen studies brought together here present the main results of the archaeological research programme conducted from 2006 until 2010 by the Ecole française d'Extrême-Orient in cooperation with the Indonesian National Centre for Archaeological Research. This programme was focused on one of the sites known in this region, namely Si Pamutung, presently located near the confluence of the Bammun and Batang Pane Rivers. These contributions are devoted firstly to the directly visible features of Si Pamutung, namely its environmental setting and its Hindu-Buddhist remains made of brick and stone.

High Performance Computing in Science and Engineering Tomáš Kozubek,Radim Blaheta,Jakub Šístek,Miroslav Rozložník,Martin Čermák,2016-06-02 This book constitutes the thoroughly refereed post-conference proceedings of the Second International Conference on High Performance Computing in Science and Engineering, HPCSE 2015, held in Soláň, Czech Republic, in May 2015. The 14 papers presented in this volume were carefully reviewed and selected from 21 submissions. The conference provides an international forum for exchanging ideas among researchers involved in scientific and parallel computing, including theory and applications, as well as applied and computational mathematics. The focus of HPCSE 2015 was on models, algorithms, and software tools which facilitate efficient and convenient utilization of modern parallel and distributed computing architectures, as well as on large-scale applications.
