**Stumbling Giants** Patricia Meredith,James L. Darroch,2017-10-31 Canada's big six banks weathered the 2008 financial crisis very well. Their adherence to tried and tested twentieth-century products and services made them a safe harbour in the financial storm. However, as the modern global information economy continues to develop, the

banks must confront their innovation crisis, or they will fail. In *Stumbling Giants*, Patricia Meredith and James L. Darroch embark on an audacious and startling examination of Canada's big banks. With banks earning forty percent return on equity from traditional retail banking, pressure from investors with short term interests has discouraged technological innovation and adaptation. Meredith and Darroch reveal the socio-technological disruptors threatening the banks' three primary product divisions – lending, wealth management, and payments – and offer innovative yet realistic recommendations for improvement. Meredith and Darroch's new vision for the Canadian banking industry involves a broad cross-section of Canadians – policy makers, regulators, customers, suppliers, investors, and bankers – and is a call to action for all interested stakeholders to work together in creating a banking system for the twenty-first century.

*An Investigation into Authentication Security of GSM algorithm for Mobile Banking* Ali Raheem, 2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network

remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to assess some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some existing security measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLAB were performed using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.

*Marketing and Mobile Financial Services* Aijaz A. Shaikh, Heikki Karjalainen, 2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer-to-peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.
