The Smoking Book Lesley Stern,2008-04-15 The Smoking Book is a dreamlike structure built on the solid foundation of two questions: how does it feel to smoke, and what does smoking mean? Lesley Stern, in an innovative, hybrid form of writing, muses on these questions through intersecting stories and essays that connect, expand, and contract like smoke rings floating through the air. Stern writes of addictions and passionate attachments, of the body and bodily pleasure, of autobiography and cultural history. Smoking is Stern's seductive pretext, her way of entering unknown and mysterious regions. The Smoking Book begins with intimate and vivid accounts of growing up on a tobacco farm in colonial Rhodesia, reminiscences that permeate subsequent

excursions into precolonial tobacco production and postcolonial life in Zimbabwe, as well as dramatic vignettes set in Australia, the United States, Scotland, Italy, Japan, and South America. Stern has written a book, at once intensely personal and kaleidoscopically international, that weaves the intimate act of a solitary person smoking a cigarette into a broad cultural picture of desire, exchange, fulfillment, and the acts that bind people together, either in lasting ways or through ephemeral encounters. The Smoking Book is for anyone who has ever smoked or loved a smoker (against their better judgment); it is for those who have never smoked or for those who mourn the loss of cigarettes as they would grieve for a lost friend. But mostly, The Smoking Book is for all those who are smoldering still.

The Scientific Basis of Tobacco Product Regulation World Health Organization,WHO Study Group on Tobacco Product Regulation,2008 This report makes available the findings of an international group of experts that provide WHO with the latest scientific and technical advice in the area of product regulation. This second report presents policy recommendations on the topics of: smokeless tobacco products and their health effects, and implications for harm reduction and research needs; fire safer cigarettes and approaches to reduced ignition propensity; mandated lowering of toxicants in cigarette smoke, such as tobacco specific nitrosamines and other constituents; and, cigarette machine smoking regimens. The Study Group intends this new set of recommendations to be useful to WHO Member States, and national policymakers and regulators in shaping tobacco control policy.

How Tobacco Smoke Causes Disease ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

The War on Smokers and the Rise of the Nanny State Theodore J. King, 2009-06 From propaganda released by the Third Reich to legislation passed in more than fifty nations, smoking is one of society's favorite targets. While the public goes along with persecuting smokers, Theodore J. King is here to tell us why we shouldn't. In this book, which does not advocate smoking, King surveys smoking bans in the United States, England, and Ireland, documenting their effects on society and commerce. King interviews many people, including members of the medical community. King takes his arguments further, showing how and why bans on smoking extend to other areas of our lives-how smokers are only the beginning. Anti-smokers represent an agenda that involves everything from personal property to the way you raise your children, what you eat, and your right to freedom of speech. Authoritarians have willing accomplices in the press and government to take power at the individual's expense. Learn how anti-smoking fanatics use tobacco control as an effective form of social engineering. King offers solutions so that smokers and non-smokers can be accommodated in a free society, where it must never be a crime to smoke in a bar, in a car, in the open air, in a restaurant, or at home.

Meat: the New Cigarette Matthew A. King, 2022-01-23 In his eye-opening book, Matthew King, registered nurse and president and co-founder of the Christian Animal Rights Association, examines the harmful effects of consuming meat and animal products from a scientific and medical standpoint . . . and the startling similarities between the promotion of Big Tobacco and Big Meat, including marketing, industry-funded studies, lobbying, and government subsidies. Fifty years ago, cigarettes were glamorized in advertising and even doctor recommended. Now, of course, we know that

cigarettes cause lung cancer, and they are banned in most public places, including hospitals. However, an equally detrimental threat to public health--the consumption of meat and animal products--remains unchecked, unacknowledged by healthcare professionals, and even served to hospital patients being treated for the very diseases a diet rich in meat causes. Hoping to bridge the disconnect healthcare workers have between the diseases they are treating and the root cause of the disease, *Meat: The New Cigarette* incorporates an overview of the damages meat causes, compelling data supporting the adoption of a plant-based diet, and the critical role nurses and other healthcare practitioners play in reversing the current crisis that endangers not only the health of America, but the world.
