#### *Cleaner Transport Fuels for Cleaner Air in Central Asia and the Caucasus*

Masami Kojima, 2000 Urban air pollution is a matter of concern in many of the newly independent states of Central Asia and the Caucasus. The poor quality of the fuel used by the largely poorly maintained vehicle stock just worsens emissions problems. It is estimated that nearly 40,000 people die prematurely and about 100,000 people fall ill every year in the big cities of the region as a result of exposure to excessive air pollution. The projections for the next 10 to 15 years are for higher vehicle numbers and increased vehicle use leading to a steady rise of damaging pollutants if current policies regarding fuel specifications and vehicle standards are not addressed quickly. This report gives the World Bank's assessment of the problem faced by the

countries in the region. It puts forward a framework for short- and medium-term measures for improving fuel quality and vehicle emissions performance.

It begins by discussing sustainable entrepreneurship in the context of the sustainable development goals (SDGs) and presents global perspectives of entrepreneurship and social consciousness. It then presents a framework describing how sustainable entrepreneurship can address issues such as poverty, access to healthcare, and gender inequality. The book closes by laying out future standpoints of green entrepreneurship and how global-local partnerships will encourage reverse innovation and collective business development projects.
