The Weaponization of Weather in the Phony Climate War Joe Bastardi, 2020-09-08 What if climate change is naturally occurring and cyclical? What if trillions of dollars will be spent to accomplish nothing? What if the real agenda is not about science, climate and weather, but simply uses this as a tool to disrupt and destroy the foundational concepts of one nation, under God, that have led to the greatest quality of life and liberty the world has ever known? At 65, Joe Bastardi is one of the most experienced meteorologists in the world today. His knowledge of past major events puts into perspective the extreme weather events seen today, that are nothing new, and in fact, not as severe as before. In this book, Bastardi goes in-depth to document naturally occurring climate and weather events to question those whose agenda it is to weaponize each weather event for the pursuit of a political and social aim. Of course, the climate is changing, and with the many natural influencers constantly in play, it always will. Thanks to an ever-fluctuating level of activity in the large natural drivers that have always controlled it, such as our Sun, the oceans, stochastic events and the very design of the system itself, climate change is natural. "A single attribution to man as the climate control knob in the face of this is questionable, if not a stretch. The reader should at least look at the ideas presented here," said Bastardi. Joe understands the fear today, given what has been nothing short of public indoctrination. His new book offers an environmentally friendly and inexpensive solution to alleviate those fears, that will not destroy the economic lifeline of this nation as the Green New Deal surely will. It begins with removing the fear that has been pushed to create what is becoming irrational panic, especially with our young. So, is this book important on multiple levels? You decide.

Urban Climates in Latin America Cristián Henríquez, Hugo Romero, 2019-02-23 This book describes the observation of urban climates in Latin-American and their relationships with urban sprawl, the economic emergence of Latin American countries, social segregation, urban ecology, disasters and resilience. The chapters include contributions dealing with urban heat islands, local climate zones, thermal comfort, air pollution, extreme climate index, green infrastructure, health issues and adaptations based on the socio-economic background of urban areas. This book revises the role of urban planning and environmental governance, highlighting the singularities in climate adaptation policies in developing countries.

Improved Understanding of Past Climatic Variability from Early Daily European Instrumental Sources Dario Camuffo, Phil D. Jones, 2012-12-06 Climate can be defined as an ensemble of many weather phenomena. Climatologists often use the mean (conventionally the monthly and annual mean) of weather-related parameters to describe climate. The mean value, however, is not all the climate. Climatic changes might occur if certain aspects of the distribution of extreme values change, while the mean does not. Katz and Brown (1992), for example, show from a theoretical viewpoint that in a changing climate, extreme values are determined more by changes in variability than changes in the mean. Possible changes in extreme event frequency receive considerable attention along with the global warming, because extremes directly impact human society and the economy. For most societally sensitive extremes and related changes in their variability, an analysis based on daily data becomes necessary. This paper considers two aspects (relative and absolute values) of extreme temperatures on a daily basis. We do not consider spells of extreme days, periods which will likely have greater socio-economic and health impacts (Kalkstein et al., 1996; Wagner, 1999), than individual extreme days.

Global Climate Xavier Rodo, Francisco Comin, 2013-03-09 Uncertainty for Everyone The one thing that is certain about the world is that the world is uncertain. I have here, the question that apart of the matter, living matter, has to resolve in each and every one of its moments of existence. The environment of a living being is apart of the living being where it turns out, the rest of the living beings live. This is the drama of life on earth. Every living individual debates with his environment, exchanging matter, energy and information in the hope of staying alive, the same as all living beings who share that same environment. The adventure of a living being (of all living beings) is to maintain reasonable independence in face of the fluctuations of uncertainty within the environment. The range of restrictions and mutual relationships is colossal. How is the transcendental pretension of staying alive regulated? There is an equation imposed by the laws of thermodynamics and the

mathematical theory of information about the interaction of a living being with his environment which we could state like this: The complexity of a living individual plus his capacity for anticipation in respect to his environment is identical to the uncertainty of the environment plus the capacity of that living being to change the environment.

Counteracting Urban Heat Island Effects in a Global Climate Change Scenario Francesco Musco, 2016-08-30 Urban heat islands are a new type of microclimatic phenomenon that causes a significant increase in the temperature of cities compared to surrounding areas. The phenomenon has been enforced by the current trend towards climate change. Although experts consider urban heat islands an urgent European Union public health concern, there are too few policies that address it. The EU carried out a project to learn more about this phenomenon through pilot initiatives. The pilots included feasibility studies and strategies for appropriately altering planning rules and governance to tackle the problem of urban heat islands. The pilots were carried out in eight metropolitan areas: Bologna/Modena, Budapest, Ljubljana, Lodz, Prague, Stuttgart, Venice/Padova, and Vienna. The feasibility studies carried out in these pilot areas focused on the specific morphology of EU urban areas, which are often characterised by the presence of historical old towns.
