Tetsuya Theodore Fujita, 1977 Determination of rainfall from satellite data requires the examination of the following features: (1) Watch for a rapid growth of the anvil cloud. It is a clear indication of strong updrafts inside the cloud. (2) Determine the motion of the head area on the upwind side. If the upwind side does not drift fast, or even stays at the same spot, it is an indication of a giant storm standing against the steering winds. (3) Rainfall does not end when the overshooting tops disappear. A ground truth experiment for interpretation of SMS/GOES data is presented. Included are: (1) techniques for cloud growth analyses from successive pictures, (2) development of a time lapse whole sky photograph program, and (3) the solution of camera calibrations that relate to the cloud height and growth computations. Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21

Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its

evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

Scapa 1919 Innes McCartney, 2019-05-30 The German High Seas Fleet was one of the most powerful naval forces in the world, and had fought the pride of the Royal Navy to a stalemate at the battle of Jutland in 1916. After the armistice was signed, ending fighting in World War I, it surrendered to the British and was interned in Scapa Flow pending the outcome of the Treaty of Versailles. In June 1919, the entire fleet attempted to sink itself in the Flow to prevent it being broken up as war prizes. Of the 74 ships present, 52 sunk and 22 were prevented from doing so by circumstance and British intervention. Marine archaeologist and historian Dr Innes McCartney reveals for the first time what became of the warships that were scuttled, examining the circumstances behind the loss of each ship and reconciling what was known at the time to what the archaeology is telling us today. This fascinating study reveals a fleet lost for nearly a century beneath the waves.

How to Build an SMS Service Jordan Schwartz, Brian Retford, 2007-06-21 The simple text message application that appears on virtually all mobile phones is the ultimate thin client, allowing your users access to the full computing power and informational depth of the Internet from a cheap cell phone on a mountaintop. Building an SMS service can be quite simple. This tutorial guides you through a variety of implementations, giving you the information you need to choose one that best fits your unique needs and circumstances. More than that, though, it seeks to help you understand the core principles necessary to make your service a success.

The Inside Text R. Harper, L. Palen, A. Taylor, 2005-06-27 SMS or Text is one of the most popular forms of messaging. Yet, despite its immense popularity, SMS has remained unexamined by science. Not only that, but the commercial organisations, who have been forced to offer SMS by a demanding public, have had very little idea why it has been successful. Indeed, they have, until very recently, planned to replace SMS with other messaging services such as MMS. This book is the first to bring together scientific studies into the values that 'texting' provides, examining both cultural variation in countries as different as the Philippines and Germany, as well as the differences between SMS and other communications channels like Instant

Messaging and the traditional letter. It presents usability and design research which explores how SMS will evolve and what is likely to be the pattern of person-to-person messaging in the future. In short, The Inside Text is a fundamental resource for anyone interested in mobile communications at the start of the 21st Century.
