Kris Hirschmann

It's Cloudy! Kris Hirschmann,2008-01-01 This book breaks down the concept of cloud formation to explain evaporation, water vapor, the four ways air rises, including convection, convergence, and orographic and frontal lifting, the dew point, condensation, and the formation of cloud droplets. Readers will also learn about updrafts, downdrafts, the life cycle of a storm cloud, and cloud names beginning with Luke Howard's classification system. Other chapters highlight low, middle, high, and vertical clouds, including stratus, stratocumulus, nimbostratus, altostratus, altocumulus, cirrus, cirrocumulus, cirrostratus, cumulus, and cumulonimbus clouds, as well as unusual cloud formations such as anvil, mammatus, and lenticular clouds, and contrails. The importance of clouds to the hydrologic cycle and the earth's temperature is also discussed. Clear, helpful diagrams, full-color photographs, bold glossary words, and an index support this easy-to-read, engaging text.

Cloudy Deborah King,1991

Cloudy Mauro Lacovich,2022-10-31 Cloudy is one of the many clouds that live in the sky. He is a rain cloud, but he is different from his counterparts: he doesn't know when he will let out the rain he carries. That causes a lot of problems to everyone that crosses Cloudy's path: a sleeping cat, Grandma Betty and even a shoe shiner waiting for a customer. Cloudy is sad for all the problem he causes and that is why he will try hard to solve the problem, through the help of a wise friend. Mauro Lacovich used his knowledge in psychology to write a delightful therapeutic story for children, with lovely illustrations to help them understand how to acknowledge when it's time to go to the bathroom. Mauro Lacovich as a psychologist and psychotherapist, uses stories in therapy and books. This is why he is recognized as the successor of Jorge Bucay. He explores the application of stories and metaphors in the context of hypnotherapy. In working with special-needs individuals, he has proven the power of storytelling through results that had otherwise been considered impossible. Therapeutic stories for children are his passion. He developed his unique style by studying the principles of cybernetics and hermeneutics, disciplines that he employs as a psychotherapist. He teaches to professionals and parents how to use and write therapeutic stories for children. He is the author of many popular books and stories for children and adults. Many of the stories that have been recounted to him have not yet been written down but continue to live on in the oral tradition in which they are remembered and cherished.

Partly Cloudy Tanita S. Davis,2021-09-07 From award-winning author Tanita S. Davis comes a nuanced exploration of the microaggressions of middle school and a young Black girl named Madalyn who learns that being a good friend means dealing with the blue skies and the rain—and having the

tough conversations on days that are partly cloudy. Perfect for fans of *A Good Kind of Trouble* and *From the Desk of Zoe Washington*. Lightning couldn't strike twice, could it? After a terrible year, Madalyn needs clear skies desperately. Moving in with her great-uncle, Papa Lobo, and switching to a new school is just the first step. It's not all rainbows and sunshine, though. Madalyn discovers she's the only Black girl in her class, and while most of her classmates are friendly, assumptions lead to some serious storms. Papa Lobo's long-running feud with neighbor Mrs. Baylor brings wild weather of its own, and Madalyn wonders just how far things will go. But when fire threatens the community, Madalyn discovers that truly being neighborly means more than just staying on your side of the street— it means weathering tough conversations—and finding that together a family can pull through anything. Award-winning author Tanita S. Davis shows us that life isn't always clear, and that partly cloudy days still contain a bit of blue worth celebrating.

Radiation in a Cloudy Atmosphere E.M. Feigelson, 2013-06-29 Radiative heat transfer is a fundamental factor in the energetics of the terrestrial atmosphere: the system consisting of the atmosphere and the underlying layer is heated by the Sun, and this heating is compensated, on the average, by thermal radiation. Only over a period of 1-3 days from some specified initial moment can the dynamic processes in the atmosphere be considered to be adiabatic. Global dynamic processes of long duration are regulated by the actual influxes of heat, one of the main ones being the radiative influx. Radiation must be taken into account in long-term, weather forecasting and when considering the global circulation of the atmosphere, the theory of climate, etc. Thus it is necessary to know the albedo of the system, the amount of solar radiation transmitted by the atmosphere, the absorptivity of the atmosphere vis-a-vis solar radiation, and also the effective radiation flux, the divergence of which represents the radiative cooling or heating. All these quantities have to be integrated over the wavelength spectrum of the solar or thermal radiation, and they must be ascertained as functions of the determining factors. The relationships between the indicated radiation characteristics, the optical quantities directly determining them, the optically active components of the atmosphere, and the meteorological fields will be discussed in this book.
