Intelligent Agents V: Agents Theories, Architectures, and Languages Jörg Müller, Munindar P. Singh, Anand S. Rao, 2007-04-29 The leading edge of computer science research is notoriously fickle. New trends come and go with alarming and unfailing regularity. In such a rapidly changing field, the fact that research interest in a subject lasts more than a year is worthy of note. The fact that, after five years, interest not only remains, but actually continues to grow is highly unusual. As 1998 marked the fifth birthday of the International Workshop on Agent Theories, Architectures, and Languages (ATAL), it seemed appropriate for the organizers of the original workshop to comment on this remarkable growth, and reflect on how the field has developed and matured. The first ATAL workshop was co-

located with the Eleventh European Conference on Artificial Intelligence (ECAI-94), which was held in Amsterdam. The fact that we chose an AI conference to co-locate with is telling: at that time, we expected most researchers with an interest in agents to come from the AI community. The workshop, which was planned over the summer of 1993, attracted 32 submissions, and was attended by 55 people. ATAL was the largest workshop at ECAI-94, and the clear enthusiasm on behalf of the community made the decision to hold another ATAL workshop simple. The ATAL-94 proceedings were formally published in January 1995 under the title *Intelligent Agents*, and included an extensive review article, a glossary, a list of key agent systems, and — unusually for the proceedings of an academic workshop — a full subject index. The high scientific and production values embodied by the ATAL-94 proceedings appear to have been recognized by the community, and resulted in ATAL proceedings being the most successful sequence of books published in Springer-Verlag's Lecture Notes in Artificial Intelligence series.

**Iconography and the Professional Reader** Kathryn Kerby-Fulton, Oxford Bodleian Library Douce 104 is the only extant manuscript of William Langland's fourteenth-century work *Piers Plowman* that is both illustrated and annotated, providing material evidence of interpretation by professional readers -- the artists, scribes, and annotators who constructed the work's meaning in an early fifteenth-century Anglo-Irish colonial context. Kathryn Kerby-Fulton and Denise L. Despres examine this evidence for what it can tell us about the politics of late-medieval manuscript preparation and the scholarly direction of manuscript use. Kerby-Fulton and Despres reconstruct, in vital detail, the lineaments of the community of professional readers and

the pressures that produced it. And they show us the roles played by the manuscript's production team -- scribe, illustrator, annotator, rubricator, and even an elusive commissioning patron -- as all involved in the act of reading and interpreting. Overall, they offer a picture that both brings to life the ideologies and rivalries that affected bookshop practices and demonstrates the meditative, mnemonic, performative, and subversive nature of late-medieval reading.

### **Tied and Bound: a Comparative View on Manuscript Binding**

Alessandro Bausi, Michael Friedrich, 2023-08-07 The present volume contains twelve chapters authored by specialists of Asian, African and European manuscript cultures reflecting on the cohesion of written artefacts, particularly manuscripts. Assuming that 'codicological units' exist in every manuscript culture and that they are usually composed of discrete elements (such as clay tablets, papyrus sheets, bamboo slips, parchment bifolios, palm leaves), the issue of the cohesion of the constituents is a general one. The volume presents a series of case studies on devices and strategies adopted to achieve this cohesion by manuscript cultures distant in space (from China to West Africa) and time (from the third millennium bce to the present). This comparative view provides the frame for the understanding of a phenomenon

that appears to be of essential importance for the study of the structure of written artefacts. Regardless of the way in which cohesion is realised, all strategies and devices that allow the constituents to be kept together are subsumed under the term 'binding'. Thus, it is possible to highlight similarities, convergences, and unique physical and technical methods adopted by various manuscript cultures to face a common challenge.

*Picture Perception in Animals* Joel Fagot,2013-06-17  
Animal researchers commonly present pictures to their subjects, usually birds or monkeys, in order to infer how natural objects are perceived and conceptualised, or to discover the brain mechanisms underlying these abilities. This unique book questions the premise of this experimental approach and asks whether or not pictures can be considered as ecologically valid and realistic stimuli for animals. Leading researchers in comparative psychology and neuroscience address such questions as: Can animals recognise objects of scenes in pictures despite variations in viewpoints?; How do animals perceive faces? and Is there an equivalence, in animals' minds, between pictures and the objects they represent?. The result is an authoritative and cutting-edge survey of current knowledge in the field, which underlines the advantages, limits and risks of using pictures to infer cognitive abilities or brain mechanisms in animal studies. *Picture Perception in Animals* will be essential reading for comparative psychologists, anthropologists, and neuroscientists working in picture perception.
