<u>Mobility Data-Driven Urban Traffic Monitoring</u> Zhidan Liu,Kaishun Wu,2021-05-18 This book introduces the concepts of mobility data and data-driven urban traffic monitoring. A typical framework of mobility data-based urban traffic monitoring is also presented, and it describes the processes of mobility data collection, data processing, traffic modelling, and some practical issues of applying the models for urban traffic monitoring. This book presents three novel mobility data-driven urban traffic monitoring approaches. First, to attack the challenge of mobility data sparsity, the authors propose a compressive sensing-based urban traffic monitoring approach. This solution mines the traffic correlation at the road network scale and exploits the compressive sensing theory to recover traffic conditions of the whole road network from sparse traffic samplings. Second, the authors have compared the traffic estimation performances between linear and nonlinear traffic correlation models and proposed a dynamical non-linear traffic correlation modelling-based urban traffic monitoring approach. To address the challenge of involved huge computation overheads, the approach adapts the traffic modelling and estimations tasks to Apache Spark, a popular parallel computing framework. Third, in addition to mobility data collected by the public transit systems, the authors present a crowdsensing-based urban traffic monitoring approach. The proposal exploits the lightweight mobility data collected from participatory bus riders to recover traffic statuses through careful data processing and analysis. Last but not the least, the book points out some future research directions, which can further improve the accuracy and efficiency of mobility data-driven urban traffic monitoring at large scale. This book targets researchers, computer scientists, and engineers, who are interested in the research areas of intelligent transportation systems (ITS), urban computing, big data analytic, and Internet of Things (IoT). Advanced level students studying these topics benefit from this book as well.

<u>Data Privacy During Pandemics</u> Benjamin Boudreaux,Matthew A. DeNardo,Sarah W. Denton,Ricardo Sanchez,Katie Feistel,Hardika Dayalani,2020-07-30 As part of the response to the COVID-19 pandemic, governments worldwide have deployed mobile phone surveillance programs to augment public health interventions. However, these programs raise privacy concerns. The authors of this report examine whether two goals can be achieved concurrently: the use of mobile phones as public health surveillance tools to help manage COVID-19 and future crises, and the protection of privacy and civil liberties.

Mobility Aware Technologies and Applications Thomas Magedanz,Ahmed Karmouch,Samuel Pierre,Iakovos Venieris,2005-11-16 The beginning of the twenty-first century is characterized by global markets, and the mobility of people is becoming an important fact of life. Consequently, the mobile user is demanding appropriate technical solutions to make use of customized information and communication services. In this context the notion of next-

generation networks (NGNs), which are driven by the convergence of the entertainment sector, the mobile Internet, and fixed/mobile telecommunications, is emerging. Such NGNs are aggregating a variety of different access networks and supporting the seamless connection of an open set of end-user devices, and due to the adoption of an all-IP network paradigm they enable a much better integration of voice and data services. Coincidently the buzzword 'fixed mobile convergence' (FMC) describes the current trend towards providing common services across fixed and mobile networks resulting in the medium term in the full integration of fixed and mobile telecommunication networks. The adoption of appropriate middleware technologies and the provision of - called service delivery platforms driven by the ongoing innovation in the field of information technologies provides today the technical foundation for supporting terminal, personal and service mobility and thus the implementation of real seamless information and communication services. Furthermore, users are nowadays looking, in light of an omnipresent service environment, for a much higher degree of customization and context awareness in the services they use. The papers in this volume look at these enabling mobility-aware technologies and their use for implementing mobility-aware and context-aware applications.

Software Engineering for Large-Scale Multi-Agent Systems Alessandro
Garcia,Carlos Lucena,Franco Zambonelli,Jaelson Castro,Andrea
Omicini,2003-04-15 Nowadays, engineering large-scale software systems means
dealing with complex systems composed of pervasive software components that
move around and adapt to nondeterministic and open environments, like the
Internet, in order to achieve systems design goals through the coordination
of autonomously distributed services. The agent metaphor, in particular
software agents and multi-agent systems (MAS), constitutes a promising
approach for covering most of the software development life cycle, from
conceptual modeling and requirements specification to architectural
definition, design, and implementation. This book presents 17 carefully
reviewed papers arranged in order to provide a coherent survey of how to
exploit agent properties and MAS issues in today's software systems. The book
offers the following topical sections: – software engineering foundations –
requirements engineering and software architecture – coordination and
mobility – reuse –dependability –empirical studies and applications
