The Coin's Hard Edge E. Bryan Rumph,

CONCUR 2001 - Concurrency Theory Kim G.

Larsen, Mogens Nielsen, 2003-06-30 This book constitutes the refereed proceedings of the 12th International Conference on Concurrency Theory, CONCUR 2001, held in Aalborg, Denmark in August 2001. The 32 revised full papers presented together with six invited contributions were carefully reviewed and selected from 78 submissions. The papers are organized in topical sections on mobility, probabilistic systems, model checking, process algebra, unfoldings and prefixes, logic and compositionality, and games.

Advances in Cryptology - CRYPTO '88 Shafi

Goldwasser, 2008-10-20 The papers in this volume were presented at the CRYPTO '88 conference on theory and applications of cryptography, held in Santa Barbara, California, August 21-25, 1988. The papers were chosen for their perceived originality and often represent preliminary reports on continuing research. The main sections deal with the following topics: Zero-Knowledge, Number Theory, Pseudorandomness, Signatures, Complexity, Protocols, Security, Cryptoanalysis. As such, they will give the committed reader a unique insight into the very latest developments in the field.

Evolution Unredacted Anab Whitehouse, 2018-11-06

What do you know about evolutionary theory? Or, maybe there are two questions here: (1) What do you think you know; (2) What do you actually know? Quite irrespective of whether individuals believe in evolution or they are opposed to it, most people probably would have to acknowledge that

they know almost nothing at all about the actual nuts and bolts of the technical issues at the heart of evolutionary theory. Their beliefs concerning this matter -- whatever the character of those beliefs might be -- is, for the most part, likely to be framed by, and filtered through, two themes: (a) a largely unexamined acceptance of the opinion of others; (b) the extent to which evolutionary theory makes carrying on with the rest of their philosophical or religious perspective either easier or more difficult to continue to do. Seeking the truth should neither be a function of blindly following the beliefs of other individuals, nor should that process be a function of what one finds easy or difficult to do. Therefore, irrespective of what your conceptual orientation concerning evolution might be, this book was written to challenge readers to critically reflect on various problems so that individuals might be able to work their way toward gaining greater insight into a variety of issues that swirl about the topic of evolution. Finally, *Evolution Unredacted* offers a critical analysis of several landmark legal decisions involving the dispute between proponents of evolution and advocates for creationism -- namely, *McLean v. Arkansas Board of Education* and *Kitzmiller, et al v. Dover Area School District, et al*. More specifically, the final chapter of *Evolution Unredacted* engages the evolution v. creationism debate through the filters of the Establishment Clause of the First Amendment and Article IV, Section 4 of the Constitution. The results of the foregoing analysis are likely to

surprise the reader. Moreover, those results tend to entail a variety of implications for the process of education.

Automate the Boring Stuff with Python, 2nd Edition Al Sweigart, 2019-11-12 Learn how to code while you write programs that effortlessly perform useful feats of automation! The second edition of this international fan favorite includes a brand-new chapter on input validation, Gmail and Google Sheets automations, tips for updating CSV files, and more. If you've ever spent hours renaming files or updating spreadsheet cells, you know how tedious tasks like these can be. But what if you could have your computer do them for you? Automate the Boring Stuff with Python, 2nd Edition teaches even the technically uninclined how to write programs that do in minutes what would take hours to do by hand—no prior coding experience required! This new, fully revised edition of Al Sweigart's bestselling Pythonic classic, *Automate the Boring Stuff with Python*, covers all the basics of Python 3 while exploring its rich library of modules for performing specific tasks, like scraping data off the Web, filling out forms, renaming files, organizing folders, sending email responses, and merging, splitting, or encrypting PDFs. There's also a brand-new chapter on input validation, tutorials on automating Gmail and Google Sheets, tips on automatically updating CSV files, and other recent feats of automations that improve your efficiency. Detailed, step-by-step instructions walk you through each program, allowing you to create useful tools as you build out your programming skills, and updated practice

projects at the end of each chapter challenge you to improve those programs and use your newfound skills to automate similar tasks. Boring tasks no longer have to take to get through—and neither does learning Python!

The Coevolution Edward Ashford Lee, 2020-03-25
Should digital technology be viewed as a new life form, sharing our ecosystem and coevolving with us? Are humans defining technology, or is technology defining humans? In this book, Edward Ashford Lee considers the case that we are less in control of the trajectory of technology than we think. It shapes us as much as we shape it, and it may be more defensible to think of technology as the result of a Darwinian coevolution than the result of top-down intelligent design. Richard Dawkins famously said that a chicken is an egg's way of making another egg. Is a human a computer's way of making another computer? To understand this question requires a deep dive into how evolution works, how humans are different from computers, and how the way technology develops resembles the emergence of a new life form on our planet. Lee presents the case for considering digital beings to be living, then offers counterarguments. What we humans do with our minds is more than computation, and what digital systems do—be teleported at the speed of light, backed up, and restored—may never be possible for humans. To believe that we are simply computations, he argues, is a “dataist” faith and scientifically indefensible. Digital beings depend on humans—and humans depend on digital beings. More likely than a planetary wipe-out of humanity is an ongoing,

symbiotic coevolution of culture and technology.

Coin Flip ,2000-12-31 Shows coin combinations with actual size coins so users can match to sample.

Freedom and the Human Person Richard Velkley,2007-12 The present collection seeks to contribute toward finding that distance by making the tradition of thought more a living reality and not an object of arid analyses. Unlike most collections the present one transcends disciplinary boundaries, as it acknowledges the interconnectedness of philosophical, theological, and political arguments on these themes.

Why Flip a Coin? Harold Warren Lewis,1997

Information Hiding Ross Anderson,1996-11-13 This book constitutes the strictly refereed post-workshop proceedings of the First International Workshop on Information Hiding, held in Cambridge, UK, in May/June 1996, within the research programme in computer security, cryptology and coding theory organized by the volume editor at the Isaac Newton Institute in Cambridge. Work on information hiding has been carried out over the last few years within different research communities, mostly unaware of each other's existence. The 26 papers presented define the state of the art and lay the foundation for a common terminology. This workshop is very likely to be seen at some point as one of those landmark events that mark the birth of a new scientific discipline.

Modelling Computing Systems Faron Moller,Georg Struth,2013-07-10 This engaging text presents the fundamental mathematics and modelling techniques

for computing systems in a novel and light-hearted way, which can be easily followed by students at the very beginning of their university education. Key concepts are taught through a large collection of challenging yet fun mathematical games and logical puzzles that require no prior knowledge about computers. The text begins with intuition and examples as a basis from which precise concepts are then developed; demonstrating how, by working within the confines of a precise structured method, the occurrence of errors in the system can be drastically reduced. Features: demonstrates how game theory provides a paradigm for an intuitive understanding of the nature of computation; contains more than 400 exercises throughout the text, with detailed solutions to half of these presented at the end of the book, together with numerous theorems, definitions and examples; describes a modelling approach based on state transition systems.

Statistics Foundation Namgyal Yolmo, 2019-08-29 Statistics Foundation is the first step in knowing the truth behind all the numbers that we encounter in our day to day life. Numbers are what we live by. If you know your stats well, you can derive any conclusion that you need to subsidize by your findings and prove your ideas that is worth proving. We will dive deeper regarding the usage of statistics in data science in its forthcoming series.

Mathematical Foundations of Computer Science 2010 Petr Hlineny, Antonin Kucera, 2010-08-10 This volume constitutes the refereed proceedings of the 35th International Symposium on Mathematical

Foundations of Computer Science, MFCS 2010, held in Brno, Czech Republic, in August 2010. The 56 revised full papers presented together with 5 invited talks were carefully reviewed and selected from 149 submissions. Topics covered include algorithmic game theory, algorithmic learning theory, algorithms and data structures, automata, grammars and formal languages, bioinformatics, complexity, computational geometry, computer-assisted reasoning, concurrency theory, cryptography and security, databases and knowledge-based systems, formal specifications and program development, foundations of computing, logic in computer science, mobile computing, models of computation, networks, parallel and distributed computing, quantum computing, semantics and verification of programs, and theoretical issues in artificial intelligence.

Introductory Statistics Alandra Kahl, 2023-04-14
This textbook is a primer for students on statistics. It covers basic statistical operations, an introduction to probability, distributions and regression. The book is divided into a series of 10 chapters covering a basic introduction to common topics for beginners. The goal of the book is to provide sufficient understanding of how to organize and summarize datasets through descriptive and inferential statistics for good decision-making. A chapter on ethics also informs readers about best practices for using statistics in research and analysis. Topics covered: 1. Introduction to Statistics 2. Summarizing and Graphing 3. Basic Concepts of Probability 4. Discrete Random Variables 5.

Continuous Random Variables 6. Sampling
Distributions 7. Estimation 8. Hypothesis Testing
9. Correlation and Regression 10. Ethics

The Obligation Dilemma Ishtiyaque

Haji,2019-08-07 Can you be morally obligated to do something? To renowned philosopher Ishtiyaque Haji, the answer is guardedly no. Regardless of whether determinism is true, he argues, there is a prima facie plausibility that there are no moral obligations. Powerfully and efficiently, Haji develops a conclusion that has major implications for how we conceive issues in moral responsibility and free will. The book develops the obligation dilemma as clearly as possible. The next step will be for further sustained philosophical work to solve it, assuming it can be resolved, inspired by Haji. In many respects, the obligation dilemma mirrors the well-known responsibility dilemma, where no one is morally responsible for anything. When suitably amended, the strongest recommendations in favor of, or in response to, the responsibility dilemma neither fully support nor undermine the obligation dilemma. Exposing the obligation dilemma's implications for responsibility, and its ramifications for forgiveness (something central to interpersonal relationships), underscores its urgency.

Becoming A Top Manager Kevin Kaiser,Michael

Pich,I. J. Schecter,2015-01-09 Make the move up to senior management with lessons from world-renowned business school experts Based on themes from INSEAD's popular Transition to General Management programme, authors Kevin Kaiser, Michael Pich, and I.J. Schecter offer sound advice and practical

insights for those looking to move to senior general management roles. Provides practical insights, clarity and confidence for those looking to move into senior general management roles Written by a well-known and experienced international author team Outlines key skills and executive tools needed for the transition Online resources also available at www.wiley.com/go/topmanager

Freedom, Recognition and Non-Domination Fabian Schuppert, 2013-08-26 This book offers an original account of a distinctly republican theory of social and global justice. The book starts by exploring the nature and value of Hegelian recognition theory. It shows the importance of that theory for grounding a normative account of free and autonomous agency. It is this normative account of free agency which provides the groundwork for a republican conception of social and global justice, based on the core-ideas of freedom as non-domination and autonomy as non-alienation. As the author argues, republicans should endorse a sufficientarian account of social justice, which focuses on the nature of social relationships and their effects on people's ability to act freely and realize their fundamental interests. On the global level, the book argues for the cosmopolitan extension of the

republican principles of non-domination and non-alienation within a multi-level democratic system. In so doing, the book addresses a major gap in the existing literature, presenting an original theory of justice, which combines Hegelian recognition theory and republican ideas of freedom, and applying this hybrid theory to the global domain.

Evolutionary Psychology Lance Workman, Will Reader, 2008-06-19 Highly acclaimed, stand-alone textbook essential for every undergraduate studying introductory evolutionary psychology.

The Attitude of Agnosticism Avery Archer, 2024-03-21 We often describe ourselves as agnostic on a wide range of questions, such as does God exist, is String Theory true, or will the President win re-election? But what does it mean to be agnostic and when is agnosticism justified? This monograph addresses these and related questions.

Oxygen Nick Lane, 2002-09-26 Oxygen has had extraordinary effects on life. Three hundred million years ago, in Carboniferous times, dragonflies grew as big as seagulls, with wingspans of nearly a metre. Researchers claim they could have flown only if the air had contained more oxygen than today - probably as much as 35 per cent. Giant spiders, tree-ferns, marine rock formations and fossil charcoals all tell the same story. High oxygen levels may also explain the global firestorm that contributed to the demise of the dinosaurs after the asteroid impact. The strange and profound effects that oxygen has had on the evolution of life pose a riddle, which this book sets out to answer. Oxygen

is a toxic gas. Divers breathing pure oxygen at depth suffer from convulsions and lung injury. Fruit flies raised at twice normal atmospheric levels of oxygen live half as long as their siblings. Reactive forms of oxygen, known as free radicals, are thought to cause ageing in people. Yet if atmospheric oxygen reached 35 per cent in the Carboniferous, why did it promote exuberant growth, instead of rapid ageing and death? Oxygen takes the reader on an enthralling journey, as gripping as a thriller, as it unravels the unexpected ways in which oxygen spurred the evolution of life and death. The book explains far more than the size of ancient insects: it shows how oxygen underpins the origin of biological complexity, the birth of photosynthesis, the sudden evolution of animals, the need for two sexes, the accelerated ageing of cloned animals like Dolly the sheep, and the surprisingly long lives of bats and birds. Drawing on this grand evolutionary canvas, Oxygen offers fresh perspectives on our own lives and deaths, explaining modern killer diseases, why we age, and what we can do about it. Advancing revelatory new ideas, following chains of evidence, the book ranges through many disciplines, from environmental sciences to molecular medicine. The result is a captivating vision of contemporary science and a humane synthesis of our place in nature. This remarkable book will redefine the way we think about the world.
