There's No Such Thing as Bad Weather Linda Åkeson McGurk, 2017-10-03

Bringing Up Bébé meets Last Child in the Woods in this “fascinating exploration of the importance of the outdoors to childhood development” (Kirkus Reviews) from a Swedish-American mother who sets out to discover if the nature-centric parenting philosophy of her native Scandinavia holds the key to healthier, happier lives for her American children. Could the Scandinavian philosophy of “There’s no such thing as bad weather, only bad clothes” hold the key to happier, healthier lives for American children? When Swedish-born Linda Åkeson McGurk moved to Indiana, she quickly learned that the nature-centric parenting philosophies of her native Scandinavia were not the norm. In Sweden, children play outdoors year-round, regardless of the weather, and letting babies nap outside in freezing temperatures is common and recommended by physicians. Preschoolers spend their days climbing trees, catching frogs, and learning to compost, and environmental education is a key part of the public-school curriculum. In the US, McGurk found the playgrounds deserted, and preschoolers were getting drilled on academics with little time for free play in nature. And when a swimming outing at a nearby creek ended with a fine from a park officer, McGurk realized that the parenting philosophies of her native country and her adopted homeland were worlds apart. Struggling to decide what was best for her family, McGurk embarked on a six-month journey to Sweden with her two daughters to see how their lives would change in a place where spending time in nature is considered

essential to a good childhood. Insightful and lively, *There's No Such Thing as Bad Weather* is a fascinating personal narrative that illustrates how Scandinavian culture could hold the key to raising healthy, resilient, and confident children in America.

Electrification Processes in Warm Rain Clouds Lothar H. Ruhnke, 1969 The problem of electrical charges on raindrops from non-thunderstorm clouds is investigated. Measurements of raindrop charges, precipitation currents and space charges made in various parts of the world indicate that on the average positive charges prevail on raindrops. To explain rain charges, a well known hypothesis requires the melting of snow. In Hawaii, however, rain often forms by condensation and coalescence without ice or snow in the upper portions of the cloud. Yet raindrop charges do not differ from charges measured in other types of rain. Measurements of charges on Hawaiian rain are discussed together with observations of electrical field and condensation nuclei profiles. It was found that positive charges are of the order of 10^{-4} esu. A correlation of these charges with wind speed was found. Electric fields in rain clouds are generally positive except at the lower cloud boundary where negative fields of up to -1000 V/m exist. Several thunderstorm theories are discussed and their applicability to the warm mechanism is examined. A new hypothesis is necessary to explain the observed electrical features of warm rain. A theory based on influence is presented and formulated. Due to low electrical conductivity inside the cloud, positive space charges form in the upper part of the cloud and negative in the lower, influenced by an impressed conduction current from above the cloud. These space charges diffuse to the raindrops. Considering a coalescence mechanism for drop growth, the residence time of raindrops in the negative space charge

area is much smaller than the corresponding time in the positive area, and so the drops usually leave the cloud with a positive charge. Numerical solutions to drop charges and electric field profiles using a realistic cloud model were obtained through the use of digital computer techniques. The theoretical results for charges on raindrops and electric field patterns agree well with observations.

The Joy of Small Things Hannah Jane Parkinson, 2021-10-05 'This book is a not-so-small joy in itself.' NIGELLA LAWSON 'Parkinson has the gift of making you look with new eyes at everyday things. The perfect daily diversion.' JOJO MOYES 'Always funny and frank and full of insight, I absolutely love Parkinson's writing.' DAVID NICHOLLS 'I loved this book . . . Parkinson's writing transports you to unexpected places of joy and comfort . . . these pages contain happiness.' MARINA HYDE 'The twenty-first century feels a lot more bearable in Parkinson's company.' CHARLOTTE MENDELSON Drawn from the successful Guardian column, these everyday exultations and inspirations will get you through dismal days. Hannah Jane Parkinson is a specialist in savouring the small pleasures of life. She revels in her fluffy dressing gown ('like bathing in marshmallow'), finds calm in solo cinema trips, is charmed by the personalities of fonts ('you'll never see Comic Sans on a funeral notice'), celebrates pockets and gleefully abandons a book she isn't enjoying. Parkinson's everyday exaltations - selected from her immensely successful Guardian column - will utterly delight. FEATURES BRAND NEW MATERIAL 'A compendium of delights.' OBSERVER 'Delightful . . . a love letter to those little moments of bliss that get us through the daily grind.' RED

Rainfall Renato Morbidelli, 2022-01-21 Rainfall: Physical Process, Measurement, Data

Analysis and Usage in Hydrological Investigations integrates different rainfall perspectives, from droplet formation and modeling developments to the experimental measurements and their analysis, to application in surface and subsurface hydrological investigations. Each chapter provides an updated representation of the involved subject with relative open problems and includes a case study at the end of the chapter. The book targets postgraduate readers studying meteorology, civil and environmental engineering, geophysics, agronomy and natural science, as well as practitioners working in the fields of hydrology, hydrogeology, agronomy and water resource management. Presents comprehensive coverage of rainfall-related topics, from the basic processes involved in the drop formation to data use and modeling Provides real-life examples for practical use in the form of a case study in each chapter

Blood on the Tracks Willson, S. Brian, 2011-08-01 “We are not worth more, they are not worth less.” This is the mantra of S. Brian Willson and the theme that runs throughout his compelling psycho-historical memoir. Willson’s story begins in small-town, rural America, where he grew up as a “Commie-hating, baseball-loving Baptist,” moves through life-changing experiences in Viet Nam, Nicaragua and elsewhere, and culminates with his commitment to a localized, sustainable lifestyle. In telling his story, Willson provides numerous examples of the types of personal, risk-taking, nonviolent actions he and others have taken in attempts to educate and effect political change: tax refusal—which requires simplification of one’s lifestyle; fasting—done publicly in strategic political and/or therapeutic spiritual contexts; and obstruction tactics—strategically placing one’s body in the way of “business as usual.” It was such actions that thrust Brian Willson into the

public eye in the mid-'80s, first as a participant in a high-profile, water-only "Veterans Fast for Life" against the Contra war being waged by his government in Nicaragua. Then, on a fateful day in September 1987, the world watched in horror as Willson was run over by a U.S. government munitions train during a nonviolent blocking action in which he expected to be removed from the tracks and arrested. Losing his legs only strengthened Willson's identity with millions of unnamed victims of U.S. policy around the world. He provides details of his travels to countries in Latin America and the Middle East and bears witness to the harm done to poor people as well as to the environment by the steamroller of U.S. imperialism. These heart-rending accounts are offered side by side with inspirational stories of nonviolent struggle and the survival of resilient communities. Willson's expanding consciousness also uncovers injustices within his own country, including insights gained through his study and service within the U.S. criminal justice system and personal experiences addressing racial injustices. He discusses coming to terms with his identity as a Viet Nam veteran and the subsequent service he provides to others as director of a veterans outreach center in New England. He draws much inspiration from friends he encounters along the way as he finds himself continually drawn to the path leading to a simpler life that seeks to "do no harm." Throughout his personal journey Willson struggles with the question, "Why was it so easy for me, a 'good' man, to follow orders to travel 9,000 miles from home to participate in killing people who clearly were not a threat to me or any of my fellow citizens?" He eventually comes to the realization that the "American Way of Life" is AWOL from humanity, and that the only way to recover our humanity is by changing our consciousness, one individual at a time, while

striving for collective cultural changes toward “less and local.” Thus, Willson offers up his personal story as a metaphorical map for anyone who feels the need to be liberated from the American Way of Life—a guidebook for anyone called by conscience to question continued obedience to vertical power structures while longing to reconnect with the human archetypes of cooperation, equity, mutual respect and empathy.

The Earth Observer , 2004

Come Rain or Shine Storm Dunlop, 2015-07-13 In Faversham, Kent, in 2003, the highest ever temperature in the UK was recorded: a blistering 38.5 °C (101.3 °F). The word blirly in Scotland describes gusts of wind and rain. The weather is a subject that the British simply cannot leave alone, and for good reason—it's likely that for more than half

the year they will experience at least three seasons in one day, so there's always plenty to talk about. This charming miscellany, as wide-ranging and unpredictable as the weather itself, is filled with curious historical facts, amazing statistics, and fascinating anecdotes that will keep you entertained come rain or shine!

Radar Meteorology Frédéric Fabry, 2015-05-21 This practical textbook introduces the fundamental physics behind radar measurements, to guide students and practitioners in the proper interpretation of radar reflectivity, Doppler velocity and dual-polarization imagery. Operational applications are explored, such as how radar imagery can be used to analyze and forecast convective and widespread weather systems. The book concludes with an overview of current research topics, including the study of clouds and precipitation using radars, signal processing, and data assimilation. Numerous full-color illustrations are included, as well as problem sets, case studies, and a variety of supplementary electronic material including animated time sequences of images to help convey complex concepts. This book is a valuable resource for advanced undergraduate and graduate students in radar meteorology and other related courses, such as precipitation microphysics and dynamics. It will also make a useful reference for researchers, professional meteorologists and hydrologists.

Shallow Clouds, Water Vapor, Circulation, and Climate Sensitivity Robert Pincus, David Winker, Sandrine Bony, Bjorn Stevens, 2018-05-29 This volume presents a series of overview articles arising from a workshop exploring the links among shallow clouds, water vapor, circulation, and climate sensitivity. It provides a state-of-the art synthesis of understanding about the coupling of clouds and water vapor to the large-scale circulation. The emphasis is on two phenomena, namely the self-aggregation of deep convection and interactions between low clouds and the large-scale environment, with direct links to the sensitivity of climate to radiative perturbations. Each subject is approached using simulations, observations, and synthesizing theory; particular attention is paid to opportunities offered by new remote-sensing technologies, some still prospective. The collection provides a thorough grounding in topics representing one of the World Climate Research Program's Grand Challenges. Previously published in *Surveys in Geophysics*, Volume 38, Issue 6, 2017 The articles "Observing Convective Aggregation", "An Observational View of Relationships Between Moisture Aggregation, Cloud, and Radiative Heating Profiles", "Implications of Warm Rain in Shallow Cumulus and Congestus Clouds for Large-Scale Circulations", "A Survey of Precipitation-Induced Atmospheric Cold Pools over Oceans and Their Interactions with the Larger-Scale Environment", "Low-Cloud Feedbacks from Cloud-Controlling Factors: A Review", "Mechanisms and Model Diversity
