Ishihara Test Chart 24 Plate Edition By Prof N L

Shraman,2019-10-09 The original Ishihara color blindness test was introduced in early last century and since then, it is by far the most

well known color vision deficiency test all around the world. Dr. Shinobu Ishihara from Japan produced three different test sets which are widely used and which all based on the same pseudoisochromatic plates. This test is actually designed to be used in a booklet and is usually executed by an eye doctor. But I have made an online version of the test, available right here. The online test is based on the 24 plates edition and will give you a little feedback at the end of the test. As this test is only made to check for red-green color blindness, any other form of CVD can not be detected. And at the end if you like you can even share your test result with your friends. This way they can see how you performed and try the test themselves if they like to. Be aware: This test consists of scanned plates. The colors are not exactly the same as in the original version. You also have to consider, that every computer screen has different color settings and therefore the test results might alter between different trials. If you would like to see all the 24 plates in an overview, you can find them at Ishihara Test for Colour Deficiency 24 Plates Edition.

What is colorblindness? * Color blindness (color vision deficiency) is a condition in which certain colors cannot be

distinguished, and is most commonly due to an inherited condition. Red/Green color blindness is by far the most common (99%) form and causes problems in distinguishing reds and greens. Another color deficiency Blue/Yellow also exists, but is rare (1%) and there is no commonly available test for it. * There is no treatment for color blindness, nor is it usually the cause of any significant disability. However, it can be very frustrating for individuals affected by it. Those who are not color blind seem to have the misconception that color blindness means that a color blind person sees only in black and white or shades of gray. While this sort of condition is possible, it is extremely rare.* The Ishihara color test is a test for color blindness* It was named after its designer, Dr. Shinobu Ishihara (1879-1963), a professor at the University of Tokyo, who first published his tests in 1917.* It makes use of the peculiarity that in red-green blindness, blue and yellow appear remarkably bright compared to red and green.* It consists of a number of colored plates, on each plate is printed a circle made of many different sized dots of slightly different colors, spread in a random manner. Ishihara's Tests for Colour Deficiency S. Ishihara,1998-09-04 These series of plates provide a quick and accurate assessment of congenital,

the most common form, of colour blindness. They distinguish between total colour blindness and strong and mild forms of both protan and deutan deficiency. A brief guide to use and interpretation is provided. Used principally by ophthalmologists for a complete classification.

The Series of Plates Designed as Tests for Colour-blindness

Shinobu Ishihara, 1936 The Ishihara Color Blindness test - named after a Japanese Professor at the University of Tokyo - is the most well known tool to test for red-green color blindness. Mr Ishihara developed this test almost 100 years ago. It was first published in 1917 and is used since then to check if someone is suffering from protanopia or deuteranopia, the two different kinds of red-green color vision deficiencies. A collection of 38 plates filled with colored dots build the base of this test. The dots are colored in different shades of a color and a number or a line is hidden inside with different shades of an other color. But enough theory, take the color blindness test by Mr Ishihara yourself and be surprised (or not) of the result.--

“Key” to Ishihara 38 Plates-Treatment of Colour Blindness, Colour Vision Prof N L Shraman,2020-05-17 This book has been written for those who are partial colour blind or having colour vision deficiency and are not able to read Ishihara book to pass a medical examination. This book had been designed on the basis of Brain mapping System Techniques for colour blindness. Anyone suffering from colour blindness can identify colours and pass medical examinations conducted by various authorizes like police, army, military, air force, navy, chemist, doctors, railway, armed forces, mining, police officers etc. You have to practice with red plates and normal plates daily at

least 2-3 hours per day for 21 days minimum. You will surely pass medicals and get the job without losing the opportunity. This is a self-learning book and no other training required. If you are colour blind and are unable to read Ishihara book, you can use this “Key” to learn all plates and see the plates as others see. If you see the plate in the original book and then the key of the plate, you will start learning colours and reading Ishihara. However, We have included both original plates and Key to facilitate reading but for better results use a hard copy of Ishihara. You can treat colour blindness at your home. Please practice a minimum of 21 days. All the light colour(Yellowish) in “Key” picture are red colours and other dark(light black) part is green. Editor
