Proceedings of the 6th CIRP-Sponsored International Conference on Digital Enterprise Technology George Q. Huang, K.L. Mak, Paul G. Maropoulos, 2009-12-12 This Proceedings volume contains articles presented at the CIRP-Sponsored International Conference on Digital Enterprise Technology (DET2009) that takes place December 14–16, 2009 in Hong Kong. This is the 6th DET conference in the series and the first to be held in Asia. Professor Paul Maropoulos initiated, hosted and chaired the 1st International DET Conference held in 2002 at the University of Durham. Since this inaugural first DET conference, DET conference series has been successfully held in 2004 at Seattle, Washington USA, in 2006 at Setubal Portugal, in 2007 at Bath England, and in 2008 at Nantes France. The DET2009 conference continues to bring together International expertise from the academic and industrial fields, pushing forward the boundaries of research knowledge and best practice in digital enterprise technology for design and manufacturing, and logistics and supply chain management. Over 120 papers from over 10 countries have been accepted for presentation at DET2009 and inclusion in this Proceedings volume after stringent refereeing process. On behalf of the organizing and program committees, the Editors are grateful to the many people who have made DET2009 possible: to the authors and presenters, especially the keynote speakers, to those who have diligently reviewed submissions, to members of International Scientific Committee, Organizing Committee and Advisory Committees, and to colleagues for their hard work in sorting out all the arrangements. We would also like to extend our gratitude to DET2009 sponsors, co-organizers, and supporting organizations.

From setting up and customizing your development environment to error handling and debugging, The Flutter Cookbook covers the how-tos as well as the principles behind them. As you progress, the recipes in this book will get you up to speed with the main tasks involved in app development, such as user interface and user experience (UI/UX) design, API design, and creating animations. Later chapters will focus on routing, retrieving data from web services, and persisting data locally. A dedicated section also covers Firebase and its machine learning capabilities. The last chapter is specifically designed to help you create apps for the web and desktop (Windows, Mac, and Linux). Throughout the book, you’ll also find recipes that cover the most important features needed to build a cross-platform application, along with insights into running a single codebase on different platforms. By the end of this Flutter book, you’ll be writing and delivering fully functional apps with confidence. What you will learn Use Dart programming to customize your Flutter applications Discover how to develop and think like a Dart programmer Leverage Firebase Machine Learning capabilities to create intelligent apps Create reusable architecture that can be applied to any type of app Use web services and persist data locally Debug and solve problems before users can see them Use asynchronous programming with Future and Stream Manage the app state with Streams and the BLoC pattern Who this book is for If you’re familiar with the basic concepts of programming and have your eyes set on developing mobile apps using Dart, then this book is for you. As a beginner, you’ll benefit from the clear and concise step-by-step recipes, while a more experienced programmer will learn best practices and find useful tips. You’ll get the most out of this book if you have experience coding in either JavaScript, Swift, Kotlin, Java, Objective-C, or C#.

Computers Larry E. Long, Nancy Long, 2002 This tenth edition is a technology update intended to bring Computers abreast with a rampaging technology. About six Internet years pass in one real-time year, the elapsed time since the last edition. The tenth edition retains the same familiar look and feel as the ninth edition. However, it contains hundreds of changes needed to ensure that Long continues to be the most current introductory IT book available. Includes over 150 new or updated images that reflect the latest releases and innovations in software. Numerous new photos show new hardware and applications. Throughout the book, capacities and speeds for communications hardware, disks, RAM, processors, printers, and so on have been adjusted to reflect the state of the art. Provides essential information on hardware, Windows, and networking procedures, and on word processing, e-mail, and browser software. Expanded presentation of ethics; additional coverage of the Internet; and a new IT Illustrated section on careers gives readers an in-depth look at career opportunities for IT specialists and for IT-competent people. For anyone who wants to advance their personal computing experience and skills, and individuals considering careers as IT specialists.

The Principles of Psychology William James,2007-04-01 The Principles of Psychology is a two-volume introduction to the study of the human mind. Based on his classroom lessons and first published in 1890, James has gathered together what he feels to be the most interesting and most accessible information for the beginning student. Psychology, according to James, deals with thoughts and feelings as its facts and does not attempt to determine where such things come from. This would be the realm of metaphysics, and he is careful to avoid crossing over from science into philosophy. This first volume contains discussions of the brain, methods for analyzing behavior, thought, consciousness, attention, association, time, and memory. Anyone wanting a thorough introduction to psychology will find this work useful and engaging. American psychologist and philosopher WILLIAM JAMES (1842-1910), brother of novelist Henry James, was a groundbreaking researcher at Harvard University and one of the most popular thinkers of the 19th century. Among his many works are Human Immortality (1898) and The Varieties of Religious Experience: A Study in Human Nature (1902).

Computers Brief Larry Long,Nancy Long,2003-04 Providing an overview coverage of computing/IT concepts and applications for beginners, this 11th edition has been updated to keep readers abreast of the thousands of changes in this rampaging technology; currency is the top priority.

Delphi Complete Works of William James (Illustrated) William James,2018-11-16 The philosopher and psychologist, William James (brother to the famous novelist Henry James) was a leading thinker of the late nineteenth century and one of the most influential American philosophers, regarded by many as the father of American psychology. James established the philosophical school known as pragmatism and is also cited as a founder of functional psychology. Noted for his rich and vivid literary style, James developed the philosophical perspective known as radical empiricism, while his work went on to influence intellectuals such as Émile Durkheim, W. E. B. Du Bois, Edmund Husserl, Bertrand Russell and Albert Einstein. For the first time in digital publishing, this eBook presents James' complete works, with numerous illustrations, rare texts, informative introductions and the usual Delphi bonus material. Leonardo's Art Workshop Amy Leidtke,2018-11-20 Leonardo's Art Workshop leads children on an interactive adventure through key art concepts by following the multidisciplinary approach of the Renaissance period polymath Leonardo da Vinci: experimenting, creating projects, and exploring how art intersects with science and nature. Photos of Leonardo's own notebooks, paintings, and drawings provide visual inspiration. More than 500 years ago, Leonardo knew that the fields of science,

technology, engineering, art, and mathematics (STEAM) are all connected. The insatiably curious Leonardo examined not just the outer appearance of his art subjects, but the science that explained them. He began his studies as a painter, but his curiosity, diligence, and genius made him also a master sculptor, architect, designer, scientist, engineer, and inventor. The Leonardo’s Workshop series shares this spirit of multidisciplinary inquiry with children through accessible, engaging explanations and hands-on learning. Following Leonardo’s example, this fascinating book harnesses children’s innate curiosity to explore the foundational elements of art—color, shadow and light, lines and patterns, forms and structures, and optics and special effects—and the science behind them. After each concept is explained using science, history, and real-world examples, kids can experience the principles first-hand with step-by-step STEAM projects, including:

- Create paints and dyes from food
- Harness a rainbow with a prism
- Build a camera obscura
- Make your own sundial
- Practice blind contour drawing
- Create a one-point perspective drawing
- Make an infinity scope

Insight from other great artists and scientists—such as Sir Isaac Newton, Sandro Botticelli, Paul Klee, and Leonardo Pisano Fibonacci—are woven into the lessons throughout. Introduce vital STEAM skills through visually rich, hands-on learning with Leonardo’s Art Workshop.

Touching and Being Touched Gabriele Brandstetter,Gerko Egert,Sabine Zubarik,2013-10-29 Touch is a fundamental element of dance. The (time) forms and contact zones of touch are means of expression both of self-reflexivity and the interaction of the dancers. Liberties and limits, creative possibilities and taboos of touch convey insights into the ‘aisthesis’ of the different forms of dance: into their dynamics and communicative structure, as well as into the production and regulation of affects. Touching and Being Touched assembles seventeen interdisciplinary papers focusing on the question of how forms and practices of touch are connected with the evocation of feelings. Are these feelings evoked in different ways in tango, Contact improvisation, European and Japanese contemporary dance? The contributors to this volume (dance, literature, and film scholars as well as philosophers and neuroscientists) provide in-depth discussions of the modes of transfer between touch and being touched. Drawing on the assumptions of various theories of body, emotion, and senses, how can we interpret the processes of tactile touch and of being touched emotionally? Is there a specific spectrum of emotions activated during these processes (within both the spectator and the dancer)? How can the relationship of movement, touch, and emotion be analyzed in relation to kinesthesia and empathy?
