Pedagogical Translanguaging Jasone Cenoz,Durk Gorter,2022-01-27 Learning through the medium of a second or additional language is becoming very common in different parts of the world because of the increasing use of English as the language of instruction and the mobility of populations. This situation demands a specific approach that considers multilingualism as its core. Pedagogical translanguaging is a theoretical and instructional approach that aims at improving language and content competences in school contexts by using resources from the learner's whole linguistic repertoire. Pedagogical translanguaging is learner-centred and endorses the support and development of all the languages used by learners. It fosters the development of metalinguistic awareness by softening of boundaries between languages when learning languages and content. This Element looks at the way pedagogical translanguaging can be applied in language and content classes and how it can be valuable for the protection and promotion of minority languages. This title is also available as Open Access on Cambridge Core.

Be the Nut Scott Smith, 2017-03-15 *Be the Nut* is a story of a little buckeye who just can't come to terms with who he really is. He so desperately wants to become an oak tree that he can't see his own special qualities and he begins to compare himself to the little acorn. His comparisons lead to coveting, scheming, lying and even stealing! He learns some very important lessons along the way; like what we wear on the outside cannot change who we are on the inside and that God knows just what He's doing when He creates each one of us.

From Christoffel Words to Markoff Numbers Christophe Reutenauer, 2019-01-15 In 1875, Elwin Bruno Christoffel introduced a special class of words on a binary alphabet linked to continued fractions which would go on to be known as Christoffel words. Some years later, Andrey Markoff published his famous theory, the now called Markoff theory. It characterized certain quadratic forms and certain real numbers by extremal inequalities. Both classes are constructed using certain natural numbers known as Markoff numbers and they are characterized by a certain Diophantine equality. More basically, they are constructed using certain words essentially the Christoffel words. The link between Christoffel words and the theory of Markoff was noted by Ferdinand Frobenius in 1913, but has been neglected in recent times. Motivated by this overlooked connection, this book looks to expand on the relationship between

these two areas. Part 1 focuses on the classical theory of Markoff, while Part II explores the more advanced and recent results of the theory of Christoffel words.

The Fictionary Dug Fresh,2005-11 The Fictionary is two things. It is both a collection of new words that should probably not be accepted into the English language and words that already have been but with new definitions that should probably not be accepted into Websters Revised Unabridged Dictionary. The Fictionary is meant to be funny. It is not meant to alarm, upset, or offend. To those who are not easily amused, we give you fair warning: this work contains memes which may be dangerous to your mental health. The Fictionary is presented for your enjoyment and is not intended for any practical purposes, use at your own risk.

Workbook for Wheelock's Latin, 3rd Edition, Revised Paul T. Comeau,Richard A. LaFleur,2000-05-30 WHEELLOCK'S LATIN: AUDIO FILES When Professor Frederic M. Wheelock's Latin first appeared in 1956, the reviews extolled its thoroughness, organization, and conciseness; at least one reviewer predicted that the book might well become the standard text for introducing students to elementary Latin. Now, five decades later, that prediction has certainly proved accurate. Workbook for Wheelock's Latin is an essential companion to the classic introductory textbook. Designed to supplement the course of study in Wheelock's Latin, 6th Edition, Revised, each of the forty chapters in this newly updated edition features: Transformation drills, word and phrase translations, and other exercises to test and sharpen the student's skills Word Power sections that focus on vocabulary and derivatives Reading comprehension questions and sentences for translation practice Perforated pages for hand-in homework assignments and space for the student's name and date

Graph Colorings Marek Kubale, 2004 Graph coloring is one of the oldest and best-known problems of graph theory. As people grew accustomed to applying the tools of graph theory to the solutions of real-world technological and organizational problems, new chromatic models emerged as a natural way of tackling many practical situations. Statistics show that graph coloring is one of the central issues in the collection of several hundred classical combinatorial problems. This book is devoted to problems in graph coloring, which can be viewed as one area of discrete optimization. Chapters are dedicated to various models and are largely independent of one another. In each chapter, the author highlights algorithmic aspects of the presented models, i.e., the construction of polynomial-time algorithms for graph coloring. This is an expanded and updated translation of the prizewinning book originally published in Polish, *Optymalizacja dyskretna. Modele i metody kolorowania grafow*. It is suitable for graduate students and researchers interested in graph theory.
