The Conservation of Decorated Surfaces on Earthen Architecture

Leslie Rainer, Angelyn Bass Rivera, 2006 For millennia, people of all cultures have decorated the surfaces of their domestic, religious, and public buildings. Earthen architecture in particular has been, and continues to be, a common ground for surface decoration such as paintings, sculpted bas-relief, and ornamental plasterwork. This volume explores the complex issues associated with preserving these surfaces. Case studies from Asia, Europe, Africa, the Middle East, and the Americas are presented. The publication is the result of a colloquium held in 2004 at Mesa Verde National Park, Colorado, co-organized by the Getty Conservation Institute (GCI) and the National Park Service (NPS). The meeting brought together fifty-five conservators, cultural resource managers, materials scientists, engineers, architects, archaeologists, anthropologists, and artists from eleven countries. Divided into four themes--Archaeological Sites, Museum Practice, Historic Buildings, and Living Traditions--the papers examine the conservation of decorated surfaces on earthen architecture within these different contexts.

Innovations in Food Technology Pragya Mishra, Raghvendra

Raman Mishra, Charles Oluwaseun Adetunji, 2020-10-12 This book gathers a collection of essays that describe recent innovations in food technology including food processing, packaging, food safety, and novel ingredients. By 2050, the world will face the challenge of having to feed an estimated 9 billion people. In order to meet that challenge, innovations in food research are of the utmost importance. The book is divided into four sections, each of which explores an important aspect like food processing, food microbiology, and nutritional security. Written by respected scholars in the field, the

respective chapters discuss a range of new and enhanced food materials, as well as processing innovations to extend shelf life and reduce toxic effects. The book also addresses the health potential of various nutraceuticals, bio-absorption of metals and their positive impacts on living systems, as well as methods for reducing food wastage, preventing the loss of nutritive value, and preserving or enhancing palatability. Given its scope, the book will be highly interesting for food scientists, both in academia and the food industry. It will also benefit advanced graduate students and senior researchers.

Conservation of Ancient Sites on the Silk Road Neville

Agnew,1997-06-19 At the Mogao grottoes, a World Heritage Site near Dunhuang in the Gobi Desert, generations of Buddhist monks created hundreds of rock temples. Nearly five hundred of these grottoes remain, lined with painted clay sculptures and wall paintings that depict legends, portraits, customs, and the arts of China over a one-thousand-year period. This volume of symposium proceedings marks the culmination of the first phase of the Getty Conservation Institute's collaborative project with the State Bureau of Culture Relics of the People's Republic of China and the Dunhuang Academy.

Secrets of the Fallen Pagoda Eugene Yuejin Wang, 2014 The capital of Tang China (618 - 907), Chang'an (present day Xi'an), was a hub for economic and cultural exchange. Nearby lies the Famen Temple, one of the most revered Buddhist sites in China. A finger bone relic of the Buddha and magnificent Tang dynasty objects of gold, silver, ceramics, and glass were sealed within an underground crypt there. For more than 1000 years, these treasures were forgotten until their chance discovery in 1987. Together with objects from other leading museums in Shaanxi, the exhibition covered by this text is a rare showcase of Tang aesthetics and culture for the first time in Southeast Asia. This catalogue accompanies an exhibition at the Asian Civilisations Museum of treasures from the Famen Temple crypt and other Tang dynasty artworks. Essays examine relic worship at the Famen Temple and the Buddhist world of the Tang, the rationale for the arrangement of donations in the crypt chambers, and the Tang dynasties contacts with the wider world. Figures and murals from tombs, magnificent reliquary boxes, rare ceramics, and gold and silver metalwork tell the story of life and culture during the Tang.

Advanced Hemodynamic Monitoring: Basics and New Horizons Mikhail Y. Kirov, Vsevolod V. Kuzkov, Bernd Saugel, 2021-08-31 This book describes how to monitor and optimize cardiovascular dynamics using advanced hemodynamic monitoring in perioperative and intensive care medicine. Stem Cells & Regenerative Medicine Krishnarao Appasani, Raghu K. Appasani, 2010-11-01 Defined as, “The science about the development of an embryo from the fertilization of the ovum to the fetus stage,” embryology has been a mainstay at universities throughout the world for many years. Throughout the last century, embryology became overshadowed by experimental-based genetics and cell biology, transforming the field into developmental biology, which replaced embryology in Biology departments in many universities. Major contributions in this young century in the fields of molecular biology, biochemistry and genomics were integrated with both embryology and developmental biology to provide an understanding of the molecular portrait of a “development cell.” That new integrated approach is known as stem-cell biology; it is an understanding of the embryology and development together at the molecular level using engineering, imaging and cell culture principles, and it is at the heart of this seminal book. Stem Cells and

Regenerative Medicine: From Molecular Embryology to Tissue Engineering is completely devoted to the basic developmental, cellular and molecular biological aspects of stem cells as well as their clinical applications in tissue engineering and regenerative medicine. It focuses on the basic biology of embryonic and cancer cells plus their key involvement in self-renewal, muscle repair, epigenetic processes, and therapeutic applications. In addition, it covers other key relevant topics such as nuclear reprogramming induced pluripotency and stem cell culture techniques using novel biomaterials. A thorough introduction to stem-cell biology, this reference is aimed at graduate students, post-docs, and professors as well as executives and scientists in biotech and pharmaceutical companies.

A History of Contemporary Chinese Art Yan Zhou, 2020-07-14

Chinese art has experienced its most profound metamorphosis since the early 1950s, transforming from humble realism to socialist realism, from revolutionary art to critical realism, then avant-garde movement, and globalized Chinese art. With a hybrid mix of Chinese philosophy, imported but revised Marxist ideology, and western humanities, Chinese artists have created an alternative approach – after a great ideological and aesthetic transition in the 1980s – toward its own contemporaneity though interacting and intertwining with the art of rest of the world. This book will investigate, from the perspective of an activist, critic, and historian who grew up prior to and participated in the great transition, and then researched and taught the subject, the evolution of Chinese art in modern and contemporary times. The volume will be a comprehensive and insightful history of the one of the most sophisticated and unparalleled artistic and cultural phenomena in the modern world.

Clinical, Biological and Molecular Aspects of COVID-19 Paul C.

Guest, 2021-03-04 The novel coronavirus 2019 (COVID-19) has caused a serious global pandemic in just eight months. Nearly every country and territory in the world has been affected by the virus. The virulence and infection rate of the virus are profound, and has required extreme social distancing measures across the globe in order to prevent overwhelming the healthcare services and hospitals. COVID-19 appears to have the greatest effects on elderly individuals and those who have co-morbid diseases, such as heart disease, asthma, and diabetes. As the peak begins to slow in many countries, the death rates remain high amidst justified fears of a second wave. A rapid worldwide mobilization has begun to identify effective treatments

and develop vaccines. This new volume will increase readers' understanding of the ongoing COVID-19 pandemic through a series of chapters that address these concerns. Leading experts will discuss the effects of the virus in cases of co-morbidities, new treatment approaches, mental health aspects of the pandemic, and convey the results of survey studies. The book will be an excellent resource for researchers studying virology, metabolic diseases, respiratory disorders, and clinical scientists, physicians, drug companies, and healthcare services and workers.

Felix Yz Lisa Bunker, 2018-06-05 "If it wasn't for the fused-with-Zyx thing, I suppose I would just be normal—whatever that means." When Felix Yz was three years old, a hyperintelligent fourth-dimensional being became fused inside him after one of his father's science experiments went terribly wrong. The creature is friendly, but Felix—now thirteen—won't be able to grow to adulthood while they're still melded together. So a risky Procedure is planned to separate them . . . but it may end up killing them both instead. This book is Felix's secret blog, a chronicle of the days leading up to the Procedure. Some days it's business as usual—time with his close-knit family, run-ins with a bully at school, anxiety about his crush. But life becomes more out of the ordinary with the arrival of an Estonian chess Grandmaster, the revelation of family secrets, and a train-hopping journey. When it all might be over in a few days, what matters most? Told in an unforgettable voice full of heart and humor, *Felix Yz* is a groundbreaking story about how we are all separate, but all connected too.

Face Image Analysis with Convolutional Neural Networks Stefan Duffner, 2009-08 Doctoral Thesis / Dissertation from the year 2008 in the subject Computer Science - Applied, grade: 1, University of

Freiburg (Lehrstuhl für Mustererkennung und Bildverarbeitung), language: English, abstract: In this work, we present the problem of automatic appearance-based facial analysis with machine learning techniques and describe common specific sub-problems like face detection, facial feature detection and face recognition which are the crucial parts of many applications in the context of indexation, surveillance, access-control or human-computer interaction. To tackle this problem, we particularly focus on a technique called Convolutional Neural Network (CNN) which is inspired by biological evidence found in the visual cortex of mammalian brains and which has already been applied to many different classification problems. Existing CNN-based methods, like the face detection system proposed by Garcia and Delakis, show that this can be a very effective, efficient and robust approach to non-linear image processing tasks. An important step in many automatic facial analysis applications, e.g. face recognition, is face alignment which tries to translate, scale and rotate the face image such that specific facial features are roughly at predefined positions in the image. We propose an efficient approach to this problem using CNNs and experimentally show its very good performance on difficult test images. We further present a CNN-based method for automatic facial feature detection. The proposed system employs a hierarchical procedure which first roughly localizes the eyes, the nose and the mouth and then refines the result by detecting 10 different facial feature points. The detection rate of this method is 96% for the AR database and 87% for the BioID database tolerating an error of 10% of the inter-ocular distance. Finally, we propose a novel face recognition approach based on a specific CNN architecture learning a non-linear mapping of the image space into a lower-dim
