Chorafas,2004-11-15 Successful management teams can identify the cost and return derived from the implementation of new technology, and they can properly apply the technology toward gaining a competitive advantage. IT and business managers alike need a resource that enables them to prepare for future operating conditions, identify beneficial solutions, and use high te

Moving Forward with the On Demand Real-time Enterprise Chuck Ballard,Fabio Hasegawa,Gord Owens,Soren Pedersen,Klaus Subtil,2006 Having more, and more current, information is fast becoming a requirement for business survival. The need permeates the enterprise because it enables proactive decision-making for problem avoidance, rather than reactive problem impact minimization. And that is the key. Thus the need for, and focus on, is real-time. Companies no longer have the long strategic time-frames in which to plan, design, and manage their business processes. Yearly revenue goals and measurements are fast becoming quarterly goals and measurements. Investors and share-holders are more demanding. They are more critical, and less forgiving, of missed performance goals. And these demands are coming at a time when the volume of data is growing, there is an increase in business mergers and acquisitions, the use of strategic outsourcing is growing, and there is an increasing requirement for faster and faster turnaround on information requests. This has put an enormous burden on the information technology (IT) organizations. And most of this change is centered around business intelligence, because that is the environment responsible for providing information for management decision-making. This IBM Redbooks publication explores the techniques and capabilities for evolving to a real-time enterprise. It also demonstrates approaches for that evolution and provides examples to help guide you in developing your strategy and implementation methodology to become a real-time enterprise.

Department of Temporal Investigations: Watching the Clock Christopher L. Bennett,2011-04-26 There's likely no more of a thankless job in the Federation than temporal investigation. While starship explorers get to live the human adventure of traveling to other times and realities, it's up to the dedicated agents of the Federation Department of Temporal Investigations to deal with the consequences to the timestream that the rest of the Galaxy has to live with day by day. But when history as we know it could be wiped out at any moment by time warriors from the future, misused relics of ancient races, or accident-prone starships, only the most disciplined, obsessive, and unimaginative government employees have what it takes to face the existential uncertainty of it all on a daily basis . . . and still stay sane enough to complete their assignments. That's where Agents Lucsly and Dulmur come in—stalwart and unflappable, these men are the Federation's unsung anchors in a chaotic universe. Together with their colleagues in the DTI—and with the help and sometimes hindrance of Starfleet's finest—they do what they can to keep the timestream, or at least the paperwork, as neat and orderly as they are. But when a series of escalating temporal incursions threatens to open a new front of the history-spanning Temporal Cold War in the twenty-fourth century, Agents Lucsly and Dulmur will need all their investigative skill and unbending determination to stop those who wish

to rewrite the past for their own advantage, and to keep the present and the future from devolving into the kind of chaos they really, really hate.

Optimize Now (or Else!) David M. Fisher, 2003-12 Companies are often their own worst enemies. We work in disconnected functional and geographic silos, making it impossible to achieve end-to-end effectiveness. We struggle to make optimal decisions due to our overwhelming lack of quality information. In *Optimize Now (or else!)*, David Fisher identifies the source of many of these problems and attacks them at their core. He explores the critical importance of processes and information that represent both the root of our problems and our greatest opportunity for dramatic improvement. He introduces new leadership in the Chief Process and Information Officer and the Process and Information Department, and specifies how to position these roles for enterprise-wide success. He further introduces the Enterprise Optimization Framework, an innovative, metric-driven decision-making framework, to ensure decisions are no longer based on gut feel but rather on quantitative expected outcomes. Finally, he explores the do's and don'ts of outsourcing and information technology with specific guidance on how these resources can be utilized to advance end-to-end optimization. It's time to put an end to our own misery. It's time to follow the path toward Enterprise Optimization, and avoid the downward spiral to Enterprise Extinction. Survival is at stake. We must Optimize Now (or else!).

Are you sacrificing your family, friendships, and freedom to keep your business alive? What if instead your business could run itself, freeing you to do what you love when you want, while it continues to grow and turn a profit? It's possible. And it's easier than you think. If you're like most entrepreneurs, you started your business so you could be your own boss, make the money you deserve, and live life on your own terms. In reality, you're bogged down in the daily grind, constantly putting out fires, answering an endless stream of questions, and continually hunting for cash. Now, Mike Michalowicz, the author of *Profit First* and other small-business bestsellers, offers a straightforward step-by-step path out of this dilemma. In *Clockwork*, he draws on more than six years of research and real life examples to explain his simple approach to making your business ultra-efficient. Among other powerful strategies, you will discover how to: Make your employees act like owners: Free yourself from micromanaging by using a simple technique to empower your people to make smart decisions without you. Pinpoint your business's most important function: Unleash incredible efficiency by identifying and focusing everyone on the one function that is most crucial to your business. Department of Temporal Investigations: Time Lock Christopher L. Bennett,2016-09-05 An all new Star Trek e-novella from the world of Deep Space Nine, featuring the fan-favorite Federation bureau the Department of Temporal Investigations! The dedicated agents of the Federation Department of Temporal Investigations have their work cut out for them protecting the course of history from the dangers of time travel. But the galaxy is littered with artifacts that, in the wrong hands, could threaten reality. One of the DTI's most crucial jobs is to track down these objects and lock them safely away in the Federation's most secret and secure facility. As it happens, Agent Gariff Lucsly and his supervisor, DTI director Laarin Andos, are charged with handling a mysterious space-time portal device discovered by Starfleet. But this device turns out to be a Trojan horse, linking to a pocket dimension and a dangerous group of raiders determined to steal some of the most powerful temporal artifacts ever known...

Securing Citrix XenApp Server in the Enterprise Tariq Azad,2008-08-08 Citrix Presentation Server allows remote users to work off a network server as if they weren't remote. That means: Incredibly fast access to data and applications for users, no third party VPN connection, and no latency issues. All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users. Unfortunately, these same features make Citrix just as dangerous to the network it's running on. By definition, Citrix is granting remote users direct access to corporate servers?..achieving this type of access is also the holy grail for malicious hackers. To compromise a server running Citrix Presentation Server, a hacker need not penetrate a heavily defended corporate or government server. They can simply compromise the far more vulnerable laptop, remote office, or home office of any computer connected to that server by Citrix Presentation Server. All of this makes Citrix Presentation Server a high-value target for malicious hackers. And although it is a high-value target, Citrix Presentation Servers and remote workstations are often relatively easily hacked,

because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix. The problem, in other words, isn't a lack of options for securing Citrix instances; the problem is that administrators aren't using them. (eWeek, October 2007). In support of this assertion Security researcher Petko D. Petkov, aka pdp, said in an Oct. 4 posting that his recent testing of Citrix gateways led him to tons of wide-open Citrix instances, including 10 on government domains and four on military domains. The most comprehensive book published for system administrators providing step-by-step instructions for a secure Citrix Presentation Server Special chapter by Security researcher Petko D. Petkov'aka pdp detailing tactics used by malicious hackers to compromise Citrix Presentation Servers Companion Web site contains custom Citrix scripts for administrators to install, configure, and troubleshoot Citrix Presentation Server

This year's book provides in-depth coverage of enterprise applications and enabling software and forecasts significant developments in those areas over the next three years. It also contains information of particular interest to senior executives, including CFO Perspectives for each of the chapters and a chapter on business reporting and XBRL. As the pace of business quickens, companies must eliminate information lag and make more timely decisions. Meanwhile, the incorporation of analytic capabilities into virtually all enterprise applications, as well as advances in knowledge management and collaborative technologies, increase the speed and effectiveness of decision-making. *Technology Forecast: 2003-2005* discusses these and other changes under way in enterprise IT. It is divided into three sections, each highlighting a different area of enterprise software, that together comprise ten chapters providing detailed coverage of specific technologies and applications: Enterprise Applications contains chapters on enterprise suites, including enterprise suite architectures, supply chain event and performance management, and enterprise resource planning; customer-facing applications; and business intelligence and enterprise analytics, including real-time business intelligence and business activity monitoring. Information Management comprises chapters on enterprise content management; knowledge management and e-learning; and collaborative technologies. Enabling Software includes chapters on XML and Web services; component frameworks, including J2EE and Microsoft .Net; application and portal servers; and business integration technologies, including business process modeling, monitoring, and management. In addition, the book features interviews with three leading figures in IT: Vivek Ranadivé Founder, chairman and CEO of TIBCO Software. A recognized industry leader, Ranadivé was selected by InfoWorld as one of the top ten technology innovators in 2002. He was also recognized by Ernst & Young as a 2002 software entrepreneur of the year.
