Home Made Yvette van Boven, 2015-11-20 Discover the fun of making food from scratch: "You'll want to eat everything in this book." –People StyleWatch Named One of the Year's Ten Best Cookbooks by Details How do you make cheese from pantry staples? Or create an oven smoker from scratch in just two minutes? Or make ice cream without a machine? In Home Made, Yvette van Boven shows you how, complete with step-by-step photos and illustrations and a gorgeous photo alongside every recipe. While her recipes are rooted in a natural, from-scratch cooking philosophy, van Boven is never preachy—she believes that this way of cooking is fun and that the dishes simply taste better! Chapters include Preserving Vegetables, Pre-Dinner Drinks, Chocolate and Cookies, After a Night Out, Ice-Cream-You-Scream, Don't Forget the Dog!, and more. Each chapter starts with a basic dish that you can make yourself, but usually don't because you think it's too complicated (think again!), and includes variations—basic bread becomes focaccia with olives and rosemary, or red cherry and thyme bread. Written with a friendly, irreverent voice, this book will inspire you to make every dish at home.

Carbon Nanofibers Madhuri Sharon, Maheshwar Sharon, 2021-03-16 This book

covers the fundamentals and applications of Carbon Nanofiber (CNF). In the first section, the initial chapter on the fundamentals of CNF is by Professor Maheshwar Sharon, the recognized “Father of Carbon Nanotechnology in India”, which powerfully provides a succinct overview of CNFs. This is followed by a chapter on biogenics that have produced unique morphologies of CNF that makes them suitable to various applications. This is followed by a chapter that mainly focuses on nanocomposites, especially those involving nanocomposites of CNF. The role of nanocatalysts and composites in promoting and enhancing the synthesis and application of CNF is then covered, followed by an important chapter on the characterization of CNF. The second section of the book encompasses the various applications of CNF, such as its use as a possible superconductor to adsorb and store hydrogen, and as a microwave absorber. The application of CNF for environmental concerns is also detailed by assessing its usefulness in dye and heavy metal removal from polluted water. The applications that are addressed include lithium-ion battery, solar cell, antenna, cosmetics, usefulness in regenerative medicine, as well as various aspects of agrotechnology.

Springer Handbook of Aerogels Michel A. Aegerter, Nicholas Leventis, Matthias Koebel, Stephen A. Steiner III, 2023-10-01 This indispensable handbook provides comprehensive coverage of the current state-of-the-art in inorganic, organic, and composite aerogels – from synthesis and characterization to cutting-edge applications and their potential market impact. Built upon Springer’s

successful Aerogels Handbook published in 2011, this handbook features extensive revisions and timely updates, reflecting the changes in this fast-growing field. Aerogels are the lightest solids known to man. Up to 1000 times lighter than glass and with a density only four times that of air, they possess extraordinarily high thermal, electrical, and acoustic insulation properties, and boast numerous entries in Guinness World Records. Originally based on silica, R&D efforts have extended this class of materials to incorporate non-silicate inorganic oxides, natural and synthetic organic polymers, carbon, metal, and ceramic materials. Composite systems involving polymer-crosslinked aerogels and interpenetrating hybrid networks have been developed and exhibit remarkable mechanical strength and flexibility. Even more exotic aerogels based on clays, chalcogenides, phosphides, quantum dots, and biopolymers such as chitosan are opening new applications for the construction, transportation, energy, defense and healthcare industries. Applications in electronics, chemistry, mechanics, engineering, energy production and storage, sensors, medicine, nanotechnology, military and aerospace, oil and gas recovery, thermal insulation, and household uses are being developed. Readers of this fully updated and expanded edition will find an exhaustive source for all aerogel materials known today, their fabrication, upscaling aspects, physical and chemical properties, and the most recent advances towards applications and commercial use. This key reference is essential reading for a combined audience of graduate students,

academic researchers, and industry professionals.

Learning to be Chinese American Liang Du,2010-09-23 Learning to Be Chinese

American aims at exploring the complicated identity production process among Chinese immigrants in the United States in relation to the rapidly changing global and local contexts. Based on original ethnographic material collected in an upper-middle class Chinese American community, the author argues for the need to move beyond the framework of traditional nation-state boundaries in order to examine the identity production process of contemporary Chinese Americans. In doing so, we can better understand how this particular group, in response to changing economic and social conditions, actively takes part in the production of their unique ethnic identities through local institutions such as community-based organizations and ethnic education. This book expands the scope of existing literature on identity production among immigrants of color in both empirical and methodological terms.
