Design and Covid-19 Rachel Cooper, Louise Mullagh, 2024-01-11 Presenting key examples and case studies of how design has responded to the pandemic, Design and Covid-19 offers lessons and approaches to design for future resilience. Design has a key role to play in not only creating products to ensure safety from the pandemic, but also in the creation of complex systems, new technologies and physical environments that enable us to carry out our lives and protect populations in the future. Design and Covid-19 identifies four key phases of the pandemic to examine how designers developed systems, services, communications and products as part of our response to the crisis, whether at an international, national or community level. Contributors report from a range of international contexts, including countries in Europe, Asia, Africa and Australasia, detailing how countries responded to the pandemic, introduced social distancing and lockdowns, developed test, track and trace systems, implemented new laws and how design and designers responded to the urgent new challenges that the pandemic created. They explore the adaptation of designs as communities searched for new ways of connecting and working through restrictions and social distancing measures, establishing local mutual aid groups and using social media to support each other through the pandemic, and go on to focus on recovery and resilience, analysing the deeper, systemic design response as industries emerge from lockdown. They explore the need to reflect on and investigate key issues in order to understand what we can learn personally, socially, economically and globally from this unprecedented crisis. Drawing upon the expertise of scholars from across the globe, Design and Covid-19 explores a wide range of design disciplines to address the complex societal and global issues highlighted throughout the pandemic, and to inform new ways of building human and planetary wellbeing.

Ordinary Differential Equations and Dynamical Systems Gerald Teschl, 2024-01-12 This book provides a self-contained introduction to ordinary differential equations and dynamical systems suitable for beginning graduate students. The first part begins with some simple examples of explicitly solvable equations and a first glance at qualitative methods. Then the fundamental results concerning the initial value problem are proved: existence, uniqueness, extensibility, dependence on initial conditions. Furthermore, linear equations are considered, including the Floquet theorem, and some perturbation results. As somewhat independent topics, the Frobenius method for linear equations in the complex domain is established and Sturm–Liouville boundary value problems, including oscillation theory, are investigated. The second part introduces the concept of a dynamical system. The Poincaré–Bendixson theorem is proved, and several examples of planar systems from classical mechanics, ecology, and electrical engineering are investigated. Moreover, attractors, Hamiltonian systems, the KAM theorem, and periodic solutions are discussed. Finally, stability is studied, including the stable manifold and the Hartman–Grobman theorem for both continuous and discrete systems. The third part introduces chaos, beginning with the basics for iterated interval maps and ending with the Smale–Birkhoff theorem and the Melnikov method for homoclinic orbits. The text contains almost three hundred exercises. Additionally, the use of mathematical software systems is incorporated throughout, showing how they can help in the study of differential equations.

Unaudited Michelle Cornish, 2020-06-28 When it's your job to look out for the public's best interest, you do what it takes . . . Especially if your husband's already died trying. When Cynthia Webber investigates a potential fraud perpetrated by Calgary's CLEAR Wind Energy Corp., she discovers a secret that causes her whole world to come crashing down. And with the secret comes a dangerous enemy who will stop at nothing to get what they want—not even murder.

**Lectures on Applied Mathematics** Hans-Joachim Bungartz,Ronald W. Hoppe,Christoph Zenger,2000-03-27 When the DFG (Deutsche Forschungsgemeinschaft) launched its collaborative research centre or SFB (Sonderforschungsbereich) 438 Mathematical Modelling, Simulation, and Verification in Material-Oriented Processes and Intelligent Systems in July 1997 at the Technische Universität München and at the Universität Augsburg, southern Bavaria got its second nucleus of the still young discipline scientific computing. Whereas the first and older one, FORTWIHR, the Bavarian Consortium for High Performance Scientific Computing, had put its main emphasis on the supercomputing aspect, this new initiative was now expected to focus on the mathematical part. Consequently, throughout all of the five main research topics (A) adaptive materials and thin layers, (B) adaptive materials in medicine, (C) robotics, aeronautics, and automobile technology, (D) microstructured devices and systems, and (E) transport processes in flows, mathematical aspects play a predominant role. The formation of the SFB 438 and its scientific program are inextricably linked with the name of Karl-Heinz Hoffmann. As full professor for applied mathematics in Augsburg (1981-1991) and in München (since 1992) and as dean of the faculty of mathematics at the TU München, he was the driving force of this fascinating, but not always easy-to-realize idea of bringing together scientists from mathematics, physics, engineering, informatics, and medicine for joint efforts in modern applied mathematics. However, scarcely work had begun when the successful captain was called to take command on a bigger boat.

**Recent Developments of Soil Mechanics and Geotechnics in Theory and Practice** Theodoros Triantafyllidis,2019-08-20 This book provides essential insights into recent developments in fundamental geotechnical engineering research. Special emphasis is given to a new family of constitutive soil description methods, which take into account the recent loading history and the dilatancy effects. Particular attention is also paid to the numerical implementation of multi-phase material under dynamic loads, and to geotechnical installation processes. In turn, the book addresses implementation problems concerning large deformations in soils during piling operations or densification processes, and discusses the limitations of the respective methods. Numerical simulations of dynamic consolidation processes are presented in slope stability analysis under seismic excitation. Lastly, achieving the energy transition from conventional to renewable sources will call for geotechnical expertise. Consequently, the book explores and analyzes a selection of interesting problems involving the stability and serviceability of supporting structures, and provides new solutions approaches for practitioners and scientists in geotechnical engineering. The content reflects the outcomes of the Colloquium on Geotechnical Engineering 2019 (Geotechnik Kolloquium), held in Karlsruhe, Germany in September 2019.

*Electrochemical Science and Technology* Keith Oldham,Jan Myland,Alan Bond,2011-11-21 Electrochemistry is a discipline of wide scientific and technological interest. Scientifically, it explores the electrical properties of materials and especially the interfaces between different kinds of matter. Technologically, electrochemistry touches our lives in many ways that few fully appreciate; for example, materials as diverse as aluminum, nylon, and bleach are manufactured electrochemically, while the batteries that power all manner of appliances, vehicles, and devices are the products of electrochemical research. Other realms in which electrochemical science plays a crucial role include corrosion, the disinfection of water, neurophysiology, sensors, energy storage, semiconductors, the physics of thunderstorms, biomedical analysis, and so on. This book treats electrochemistry as a science in its own right, albeit resting firmly on foundations provided by chemistry, physics, and mathematics. Early chapters discuss the electrical and chemical properties

of materials from which electrochemical cells are constructed. The behavior of such cells is addressed in later chapters, with emphasis on the electrodes and the reactions that occur on their surfaces. The role of transport to and from electrodes is a topic that commands attention, because it crucially determines cell efficiency. Final chapters deal with voltammetry, the methodology used to investigate electrode behavior. Interspersed among the more fundamental chapters are chapters devoted to applications of electrochemistry: electrosynthesis, power sources, “green electrochemistry”, and corrosion. Electrochemical Science and Technology is addressed to all who have a need to come to grips with the fundamentals of electrochemistry and to learn about some of its applications. It will constitute a text for a senior undergraduate or graduate course in electrochemistry. It also serves as a source of material of interest to scientists and technologists in various fields throughout academia, industry, and government – chemists, physicists, engineers, environmentalists, materials scientists, biologists, and those in related endeavors. This book: Provides a background to electrochemistry, as well as treating the topic itself. Is accessible to all with a foundation in physical science, not solely to chemists. Is addressed both to students and those later in their careers. Features web links (through [www.wiley.com/go/EST](http://www.wiley.com/go/EST)) to extensive material that is of a more tangential, specialized, or mathematical nature. Includes questions as footnotes to support the reader’s evolving comprehension of the material, with fully worked answers provided on the web. Provides web access to Excel® spreadsheets which allow the reader to model electrochemical events. Has a copious Appendix of relevant data.

*Biomaterials* David Byrom,1991-06-18 Biomaterials are produced from biological material and are used for their physical characteristics. This book looks at the range of biomaterials and their applications which range from the use of polysaccharides as thickening agents to the use of proteins as fibres and adhesives.
