🔍 **Energy and Mass in Relativity Theory** Lev Borisovich Okun,2009 Energy and Mass in Relativity Theory presents about 30 pedagogical papers published by the author over the last 20 years. They deal with concepts central to relativity theory: energy E , rest energy E_0 , momentum p , mass m , velocity v of particles of matter, including massless photons for which $v = c$. Other related subjects are also discussed. According to Einstein's equation $E_0 = mc^2$, a massive particle at rest contains rest energy which is partly liberated in the nuclear reactions in the stars and the sun, as well as in nuclear reactors and bombs on the earth. The mass entering Einstein's equation does not depend on velocity of a body. This concept of mass is used in the physics of elementary particles and is gradually prevailing in the modern physics textbooks. This is the first book in which Einstein's equation is explicitly compared with its popular though not correct counterpart $E = mc^2$, according to which mass increases with velocity. The book will be of interest to researchers in theoretical, atomic and nuclear physics, to historians of science as well as to students and teachers interested in relativity theory.

🔍 **Calcium Physiology** C. L. Comar,Felix Bronner,2014-05-12 Mineral Metabolism, Volume III: Calcium Physiology focuses on the processes, reactions, and approaches involved in calcium metabolism and study of bones. The selection first underscores the measurements and models of skeletal metabolism and advances in the physical biology of bone and other hard tissues, including measurements and concepts, composition and structure of bone minerals, and dynamic studies of bone minerals. The text then takes a look at calcium and striated muscle and renal excretion of alkaline earths. Topics include physicochemical state of alkaline earth cations in plasma and urine, effects of drugs, renal diseases, calcium and contractile proteins, resting potential and action potential, calcium and muscle contraction, and coupling of excitation and energy synthesis. The book examines the aspects of intestinal absorption of calcium, with special reference to vitamin D, as well as the physiological mechanism of the intestinal absorption of calcium; effect of other nutritional and physiological factors on calcium absorption; and structure of the intestinal epithelial cell. The selection is a dependable source material for physiologists and readers interested to pursue research on calcium physiology.

🔍 **A New Era in Space Transportation** L. G. Napolitano,2013-10-02 A New Era In Space Transportation contains selected papers presented at the 27th International Astronautical Congress, held in Anaheim, California in October 1976. The book presents a survey of the trends and developments in astronomical research in the world. The proceedings cover a variety of points of view on the aspects of space transportation. It is divided into four parts. Part I is devoted to theme sessions, lectures, and a comprehensive look into the American and European programs of space transportation. The second part addresses certain areas in the fields of engineering and life sciences such as astrodynamics, bioastronautics, fluid dynamics, materials and structures, propulsion, fluid dynamics of planetary atmospheres, and laser uses in propulsion. Part III deals with space technology and space systems. The final part focuses on relevant applications like telecommunications, remote sensing of earth resources, and material processing in space. Engineers, astronomers, astrophysicists, biologists, industrialists, and researchers in the field of space technology will find this book a good source of information.

🔍 **Gyros, Clocks, Interferometers...: Testing Relativistic Gravity in Space** C. L.🔍 mmerzahl,C.W.F. Everitt,F.W. Hehl,2007-09-04 Many new tests of gravity and, in particular, of Einstein's general relativity theory will be carried out in the near future: the Lense--Thirring effect and the equivalence principle will be tested in space; moreover, gravitational waves will be detected, and new atomic interferometers and clocks will be built for measurements in gravitational and inertial fields. New high-precision devices have made these experiments feasible. They will contribute to a better understanding of gravitational physics. Both experimental developments and the theoretical concepts are collected in this volume. Exhaustive reviews give an overall insight into the subject of experimental gravitation.

🔍 **Mark Leckey** Mitch Speed,2020-02-11 An illustrated examination of Mark Leckey's celebrated video montage. In 1999, the British artist Mark Leckey released his video-montage *Fiorucci Made Me Hardcore*, a dreamscape vignette that communes with the rapturous promises of youth. Putting archive material to use, Leckey entwined footage of underground dance and street culture in Britain with audio grifted and recorded in the artist's studio. In this illustrated study, the first comprehensive examination of the work, Mitch Speed argues that by interweaving personal and collective memory, this work gives voice to the complexities of class and cultural transformation during Britain's Thatcherite era. Oscillating between local and expansive resonances, *Fiorucci Made Me Hardcore* takes form as a homage, love letter, and work of criticism that eschews analysis, instead incanting the deeper implications of its subject.
