An Investigation into Authentication Security of GSM algorithm for Mobile Banking Ali Raheem, 2014-02-01 Due to the mobility of its users, GSM systems are vulnerable to an unauthorized access and eaves droppings when compared with the traditional fixed wired networks. The main idea of this project is to develop an application device in order to secure mobile banking over unsecure GSM network. It is important to mention that mobile banking is a term that is used for performing balance checks, account transactions, payments, credit applications, and many other online applications. Unfortunately, the security architecture for cellular network is not entirely secure. As a matter of fact, GSM network infrastructure is proved to be insecure. Many possible attacks are documented in literature. For security was never considered in the initial stages, the sending of protective banking information across an open mobile phone network remains insecure. Consequently, this project focuses entirely on the development and design of security techniques in order to asses some security issues within mobile banking through cellular phone network (GSM). The main aim of this project is to investigate and examine the following: 1. Security issues in each level of the mobile network architecture. 2. Messages and signals

exchanged between user's cellular phone and mobile network at each level. 3. The overall security architecture of GSM flaws. 4. Some existing security measures for mobile transactions. 5. The current security within SMS banking and GPRS banking. Finally, two folded simulations in MATLAB were performed using OFDM which is a broadband multicarrier modulation method that provides a high performance operation to transmitted and received data or information.

Mobile banking in the Ethiopian bank sector Dereje Tesfa, 2019-08-30 Seminar paper from the year 2019 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: A, Wolkite University (College of Business and Economics), language: English, abstract: This article looks at how and why banking customers have begun to take advantage of mobile services for their banking requirements and why some of them are still hesitant to adopt mobile banking in Ethiopian banking sector. Using a variety of platforms, services are being created to enable mobile devices to perform many activities of the traditional internet in a reduced format for mobile devices. One such area of activity is mobile banking. A cluster of dedicated and demanding mobile phone users (consumers) have multiplied tremendously over the years, who expect real-time information and access and high levels of service.

Marketing and Mobile Financial Services Aijaz A.

Shaikh,Heikki Karjaluoto,2018-12-21 Mobile financial services (MFS) are of major interest and importance to both researchers and practitioners. The role played by nonbanking actors including telecoms and FinTech firms as well as other participants, such as PayPal and Amazon, in developing and deploying innovative financial and payment services is undeniable. Peer2peer (P2P) payments from nonbank services are becoming increasingly commonplace and will shortly be codified by EC (EU?) regulations requiring banks to provide access to consumer data for third-party app developers and service providers. Three major mobile financial systems—mobile banking, mobile payments, and branchless banking—currently dominate the electronic retail banking sector. Although interconnected and interrelated, their business models, regulatory frameworks, and target markets are distinct. This book provides a unified perspective on MFS and discusses its evolution, growth, and future, as well as identifying the frameworks, stakeholders, and technologies used in financial information systems in general and MFS in particular. Academics and researchers in digital and financial marketing will find this book an invaluable resource, as will bank executives, regulators, policy makers, FinTech professionals, and anyone interested in how mobile technology, social media and financial services will increasingly intersect.

Effects of Mobile Banking Service Quality on Customer Satisfaction. The Case of Commercial Bank, Ethiopia

Tarekegn Balango, 2023-04-25 Seminar paper from the year 2023 in the subject Business economics - Business Management, Corporate Governance, grade: 3.85, , course: Master of business administration, language: English, abstract: It was proven that perceived service quality had a positive relationship with customer satisfaction and the researcher think this supports the argument of linking mobile banking service and customer satisfaction. They use the SERVQUAL model but rather the dimension only scale to assess service quality other than website design and responsiveness. The researcher therefore think using the SERVQUAL model (MiykelSisaye) model would be a contribution to existing research mobile banking context. This is the current research gap and in order to fill the gap, the researcher was try to measure service quality and customer satisfaction, The study aimed at examining the effect of five online banking service quality dimensions on the customers satisfaction in the case of CBE. The study followed an explanatory research design identifying the dimensions of service quality for online services namely reliability, responsiveness, ,personalization, web design and security as independent variable and customer satisfaction as dependent variable. Primary data was collected for the analysis based on five points Likert scale from 396 sample respondents who are customers of CBE online banking services. The data was coded and analyzed using SPSS version 25 software. The reliability of the instrument was checked using Cronbach's alpha test. The data analysis employed both descriptive and inferential statistical methods. The descriptive statistics was used for summarizing the background of respondents and computing average score of CBE on each dimensions of service quality and customers satisfaction. Correlation and multiple regression analysis were conducted to examine the relationship between the dependent and independent variables.

Integrity in Mobile Phone Financial Services Pierre-Laurent Chatain, Raul Hernandez-Coss, Kamil Borowik, Andrew Zerzan, 2008-06-10 Governments are challenged to make an innovation-friendly climate while simultaneously ensuring that business development remain sustainable. Criminal use of the technology terrorist financing and money laundering challenges long-run business viability via risk of massive investment flight and public distrust of new players entering the market. Sustainable business models are those that base regulation on a careful risk-based analysis. This study identifies the perceived risks and compares them with the actual level of risk for each category of mobile phone financial services. The comparison reveals that the perceptions do not weigh up to the reality. Based on fieldwork in seven locations where the technology has taken off, this paper finds that providers apply measures that are consistent with international standards to combat money laundering and terrorist financing. It identifies the sometimes non-traditional means the industry uses that both mitigate the risks and are in line with good business practices. Acknowledging that mobile phone financial services are no riskier than other channels, governments are called to treat them as an opportunity to expand access to finance.

Mobile Apps and Banking Paulina Nolan, 2014 Through a variety of new mobile applications (apps), technology is rapidly changing the way consumers shop. Today's mobile apps offer new beneficial services designed to enhance the consumer shopping experience. These apps allow smartphone users to compare competing products and retailers in real-time, seek out the best deals, and pay for their purchases by waving their phones at the checkout counter. Many of these apps have been installed on millions of devices, and all use mobile technology to alter consumers' shopping. Mobile payments can be a convenient way for consumers to pay for goods and services but they also raise consumer protection concerns. This book examines the mobile

payments industry and its effects on consumers, while exploring areas where more attention is warranted such as dispute resolution, data security, and privacy.
