<u>Political Communication in the Time of Coronavirus</u> Peter Van Aelst,Jay G. Blumler,2021-09-13 Timely text authored by leading political communication scholars on the effects of tCovid-19 on political communication. How governments, journalists, and the public communicate is of interest within the disciplines of political science, media studies, communication studies, and journalism.

<u>Communication</u> Barrie Hopson,Mike Scally,1991-10-28 Explains how to recognize and prevent breakdowns in communication at work and at home. The book goes on to provide a practical guide to improving communication skills.

The Reconstruction of Space and Time Rich Ling,Scott W. Campbell,2011-12-31 One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another. Mobile communication enables us to call specific individuals, not general places. Regardless of location, we are able to make contact with almost anyone, almost anywhere. This advancement has changed, and continues to change, human interaction. Now, instead of agreeing on a particular time well beforehand, we can iteratively work out the most convenient time and place to meet at the last possible moment--on the way to the meeting or once we arrive at the destination. In their early days, mobile devices were primarily used for various types of emergency situations and for work. In some cases, the device was an essential element in various business operations or used so that overseas workers could communicate with their families. The distance between a remote posting and the people back home was suddenly and dramatically reduced. People began to share these devices not necessarily out of economic issues, but also questions of family and interpersonal dynamics. The process of sharing decisions as to who is a legitimate partner makes the nature of relationships more explicit. By examining the economy of sharing,

we not only see how sharing mobile phones restructures social space, but are also given insight into an individual's web of interactions. This cutting-edge book deals with modern ways of thinking about communication and human interaction; it will illuminate the ways in which mobile communication alters our experience with space and time.

Time-Triggered Communication Roman Obermaisser,2018-09-03 Time-Triggered Communication helps readers build an understanding of the conceptual foundation, operation, and application of time-triggered communication, which is widely used for embedded systems in a diverse range of industries. This book assembles contributions from experts that examine the differences and commonalities of the most significant protocols including: TTP, FlexRay, TTEthernet, SAFEbus, TTCAN, and LIN. Covering the spectrum, from low-cost time-triggered fieldbus networks to ultra-reliable time-triggered networks used for safety-critical applications, the authors illustrate the inherent benefits of time-triggered communication in terms of predictability, complexity management, fault-tolerance, and analytical dependability modeling, which are key aspects of safety-critical systems. Examples covered include FlexRay in cars, TTP in railway and avionic systems, and TTEthernet in aerospace applications. Illustrating key concepts based on real-world industrial applications, this book: Details the underlying concepts and principles of time-triggered communication Explores the properties of a time-triggered communication system, contrasting its strengths and weaknesses Focuses on the core algorithms applied in many systems, including those used for clock synchronization, startup, membership, and fault isolation Describes the protocols that incorporate presented algorithms Covers tooling requirements and solutions for system integration, including scheduling The information in this book is extremely useful to industry leaders who design and manufacture products with distributed embedded systems based on time-triggered

communication. It also benefits suppliers of embedded components or development tools used in this area. As an educational tool, this material can be used to teach students and working professionals in areas including embedded systems, computer networks, system architectures, dependability, real-time systems, and automotive, avionics, and industrial control systems.

Time to Talk Jean Gross,2013-05-21 Time to Talk provides a powerful and accessible resource for practitioners to help develop their own skills, as well as supporting a whole-school or setting approach to speaking and listening. Written by the government's former Communication Champion for children, it showcases and celebrates effective approaches in schools and settings across the country. Jean Gross helpfully summarises research on what helps children and young people develop good language and communication skills, and highlights the importance of key factors: a place to talk, a reason to talk and support for talk. This practical and engaging book also provides: whole-class approaches to developing all children and young people's speaking and listening skills; 'catch-up' strategies for those with limited language ways in which settings and schools can develop an effective partnership with specialists, such as speech and language therapists, to help children with more severe needs; examples of good practice in supporting parents/carers to develop their children's language skills; answers to practitioners' most frequently asked questions about speech and language. This book is for all school leaders, teachers and Early Years practitioners concerned about the growing number of children and young people with limited language and communication skills.

Adoption and Optimization of Embedded and Real-Time Communication Systems Virtanen, Seppo,2013-01-31 Adoption and Optimization of Embedded and Real-Time Communication Systems presents innovative research on the integration of embedded systems, real-time systems and the developments

towards multimedia technology. This book is essential for researchers, practitioners, scientists, and IT professionals interested in expanding their knowledge of this interdisciplinary field.

Isochronous Wireless Network for Real-time Communication in Industrial Automation Henning Trsek,2016-02-26 This dissertation proposes and investigates an isochronous wireless network for industrial control applications with guaranteed latencies and jitter. Based on a requirements analysis of real industrial applications and the characterisation of the wireless channel, the solution approach is developed. It consists of a TDMA-based medium access control, a dynamic resource allocation and the provision of a global time base for the wired and the wireless network. Due to the global time base, the solution approach allows a seamless and synchronous integration into existing wired Real-time Ethernet systems.

Political Communication in Real Time Dan Schill,Rita Kirk,Amy E. Jasperson,2016-10-04 Much has been made of the speed and constancy of modern politics. Whether watching cable news, retweeting political posts, or receiving news alerts on our phones, political communication now happens continuously and in real time. Traditional research methods often do not capture this dynamic environment. Early studies that guided the study of political communication took place at a time when transistors and FM radio, television, and widely distributed films technologically changed the way people gained information and developed knowledge of the world around them. Now, the environment has transformed again through digital innovations. This book provides one of the first systematic assessment of real-time methods used to study the new digital media environment. It features twelve chapters—authored by leading researchers in the field—using continuous or real time response methods to study political communication in various forms. Moreover, the authors explain how viewer attitudes can be measured over time, message effects

can be pin-pointed down to the second of impact, behaviors can be tracked and analyzed unobtrusively, and respondents can naturally respond on their smartphone, tablet, or even console gaming system. Leading practitioners in the field working for CNN, Microsoft, and Twitter show how the approach is being innovatively used in the field. Political Communication in Real Time is a welcome addition to the growing field of interest in big data and continuous response research. This volume will appeal to scholars and practitioners in political science and communication studies wishing to gain new insights into the strengths and limitations of this approach. Political communication is a continuous process, so theories, applications, and cognitive models of such communication require continuous measures and methods.

Communication in Times of Trouble Matthew W. Seeger,Timothy L. Sellnow,2019-01-22 Presents the best practices of crisis communication and emergency risk communication This book covers crisis communication strategies and focuses on practical applications for effective management. It includes an extensive discussion of best practices in pre-crisis, crisis and post crisis stages. The book pays special attention to the needs of meeting the needs of diverse audiences and communicating in a responsive and responsible way. The principles are appropriate for many kinds of events including earthquakes, tornadoes, hurricanes, tsunamis, epidemics, and pandemics as well as industrial accidents, toxic spills, transportation disasters, fires and intentional events. In the first chapter, Communication in Times of Trouble introduces the concept of best practices and establishes their relevance for crisis communication and emergency risk communication. A chapter is dedicated to each of the ten best practices. In each chapter, the best practice is described, examples of successful and unsuccessful application of the best practice in both organizational crises and natural disasters/emergencies are

provided, advice for practical application is given, and a summary is provided. The concluding chapter details the challenges and opportunities for developing and implementing a response strategy that includes the best practices as a whole. Focuses on application and explanation in crisis communication to benefit those with backgrounds in emergency management, risk management, political science, disaster sociology, and public health Covers natural, large-scale emergencies such as earthquakes, tornadoes, hurricanes, tsunamis, epidemics, and pandemics, which aren't generally detailed in existing crisis communication texts Presents 10 best practices for dealing with emergencies: Process Approach; Pre-Event Planning; Partnerships; Public Concern; Honesty; Collaborate; Media access; Compassion; Uncertainty; Empowerment Communication in Times of Trouble will be of great interest to undergraduate students and practitioners in communication, public relations, public affairs, public information, public health, and emergency management.

Real-time Communication Protocols for Multi-hop Ad-hoc Networks Reinhard Gotzhein,2020-01-01 This book focuses on core functionalities for wireless real-time multi-hop networking with TDMA (time-division multiple access) and their integration into a flexible, versatile, fully operational, self-contained communication system. The use of wireless real-time communication technologies for the flexible networking of sensors, actuators, and controllers is a crucial building block for future production and control systems. WirelessHART and ISA 100.11a, two technologies that have been developed predominantly for industrial use, are currently available. However, a closer analysis of these approaches reveals certain deficits. Current research on wireless real-time communication systems shows potential to remove these limitations, resulting in flexible, versatile, and robust solutions that can be implemented on today's low-cost and resource-constrained hardware platforms.

Unlike other books on wireless communication, this book presents protocols located on MAC layer and above, and build on the physical (PHY) layer of standard wireless communication technologies.

Time to Listen to Children Pat Milner,Birgit Carolin,1999 This practical guide to communicating with children stresses the importance of learning to listen. Contributors give accounts of their work in education, social services, health, law and voluntary organizations.

Time, Communication and Global Capitalism Wayne Hope,2016-04-08 In this book Wayne Hope analyzes the double relation between time and global capitalism. In order to do this, he cross-relates four epistemes of time - epochality, time reckoning, temporality and coevalness – with four materializations of time – hegemony, conflict, crisis and rupture. Using this framework allows Hope to argue that global capitalism is epochally distinctive, riven by time conflicts, prone to recurring

crises, and vulnerable to collective opposition. These critical insights are not easily thematized in a mediated world of real-time reflexivity, detemporalized presentism, and denials of coevalness associated with structural exclusions of the poor. However, the worldwide repercussions of the 2008 financial collapse and the resulting confluence of occupation movements, riots, protests, strike activity, and anti-austerity activism raises the prospect of a rupture within and beyond global capitalism.

Innovations in Embedded and Real-Time Systems Engineering for Communication Virtanen, Seppo,2012-04-30 This book has collected the latest research within the field of real-time systems engineering, and will serve as a vital reference compendium for practitioners and academics--Provided by publisher.

Real-Time Modelling and Processing for Communication Systems Muhammad Alam,Wael Dghais,Yuanfang Chen,2017-12-27 This book presents cutting-edge work on real-time modelling and processing, a highly active research field in both the research and industrial domains. Going beyond conventional real-time systems, major efforts are required to develop accurate and computational efficient real-time modelling algorithms and design automation tools that reflect the technological advances in high-speed and ultra-low-power transceiver communication architectures based on nanoscale devices. The book addresses basic and more advanced topics, such as I/O buffer circuits for ensuring reliable chip-to-chip communication, I/O buffer behavioural modelling, multiport empirical models for memory interfaces, compact behavioural modelling for memristive devices, and resource reservation modelling for distributed embedded systems. The respective chapters detail new research findings, new models, algorithms, implementations and simulations of the above-mentioned topics. As such, the book will help both graduate students and researchers understand the latest research into real-time

modelling and processing.

Political Communication in the Time of Coronavirus Peter Van Aelst,Jay G. Blumler,2021-09-13 This book examines how the COVID-19 pandemic impacted the flows of communication between politicians, journalists, and citizens. Distinguished contributors grapple with how the pandemic, as a global unexpected event, disrupted the communication process and changed the relationships between politics, media, and publics, the three central players of political communication. Using different methodologies, they scrutinize changes in government communication, (new) media coverage, and public opinion during this crisis. The book moves beyond the USA and Western Europe to include cases from Eastern Europe, Latin America, and Asia, taking into account how variations in the political context, the media system and personal leadership can influence how the COVID-19 pandemic challenged the political communication process. It is an ideal text for advanced students and scholars of political communication, political science, and media studies. Chapter 13 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license available at http://www.taylorfrancis.com.

Organizational Communication and Technology in the Time of Coronavirus Larry D. Browning,Jan-Oddvar Sørnes,Peer Jacob Svenkerud,2022-06-14 The pandemic has created a crisis that has no equivalent in recent history, leading to a wide range of disruption across various social strata, highlighting and reinforcing inequality, and leading to profound organizational shifts. In this book, organizational communication scholars grapple with the implications of the pandemic for work and organizations, examining the immediate impact on their personal lives in an ethnographic narrative, but also theorising what the long term implications of COVID-19 will be. The book also explores the devastating impact of the virus on healthcare

workers, on BIPOC entrepreneurs, and on people in developing economies. A timely, innovative work, this book will appeal to academics studying organizational communication, organizational responses to crisis, ethnographies, and alternative research methods.

Discrete-Time Models for Communication Systems Including ATM Herwig Bruneel,Byung G. Kim,2012-12-06 Most queuing analyses performed in the literature are based on characterization of queueing phenomena in continuous-time items. Recently in the telecommunication industries, BISDN (broadband integrated services digital network) has received considerable attention since it can provide a common interface for future communication needs including video, data, and speech. Since information in BISDN is transported by means of dicsrete units of 53-octet ATM (asynchronous transfer mode) cells, interests in discrete-time systems have increased. Discrete-Time Models for Communication Systems Including ATM provides a general framework for queueing analyses of dicrete-time systems. After a brief look at past studies of discrete-time systems, a detailed description and analysis are presented for a generic discrete-time model with a single server, arbitrary service times and independent arrivals. The book then follows a less stringent approach and focuses more on the average statistics and on different queueing disciplines. Conventional first-in-out and last-in-first-out disciplines are discussed in terms of the average statistics. Systems with multiple classes of messages without class-dependent priorities are considered to establish a discrete-time conservation law. Multiple classes with priorities are also considered to derive performance measures of priority scheduling disciplines. Finally, a multi-queue system with cyclic service is analyzed in the context of round-robin service ordering. This is followed by analyses of discrete-time queueing systems with `more complicate' input and output processes. Specifically, single-server systems are investigated whereby either the arrivals

or the server is subject to random interruptions. Results are mainly obtained in terms of generating functions and mean values of the principal performance measures. The influence of the nature of the arrival correlation and the server interruptions on the queueing behavior is discussed. Finally, the book explores queueing models directly associated with ATM switches and multiplexers. This book is a valuable reference and may be used as a text for and advanced course on the subject.
