The Oxford Handbook of Comparative Cognition Thomas R. Zentall,Edward A. Wasserman,2012-03-20 In the past decade, the field of comparative cognition has grown and thrived. No less rigorous than purely behavioristic investigations, examinations of animal intelligence are useful for scientists and psychologists alike in their quest to understand the nature and mechanisms of intelligence. Extensive field research of various species has yielded exciting new areas of research, integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition. The Oxford Handbook of Comparative Cognition contains sections on perception and illusion, attention and search, memory processes, spatial cognition, conceptualization and categorization, problem solving and behavioral flexibility, and social cognition processes including findings in primate tool usage, pattern learning, and counting. The authors have incorporated findings and theoretical approaches that reflect the current state of the field. This comprehensive volume will be a must-read for students and scientists who want to know about the state of the art of the modern science of comparative cognition.

Critical Appraisal of Medical Literature David Marchevsky, 2012-12-06 Critical Appraisal of Medical Literature provides a step-by-step approach to help the reader reach a good level of proficiency in systematic critical appraisal of medical information. To this end, the book covers all the elements that are necessary to develop these skills and is a comprehensive guide to the subject. The book is written in three parts. The first part focuses on the logical justification and the validity of medical

information. Its chapters present basic working definitions and discussions on relevant basic topics of statistics and epidemiology. The second part focuses on the complementary aspects of critique, common study designs and articles whose main topics are treatment, diagnosis, prognosis, aetiology, reviews, medical guidelines, audit, and qualitative research. The third part presents some statistical techniques that are commonly used in published articles. **Critical Appraisal of Medical Literature** is intended for those interested in developing critical appraisal skills such as psychiatric trainees preparing for the Critical Review Paper of the MRCPsych Examination in the UK, other practitioners as part of their preparation for examinations, and medical professionals and students as part of their introduction to aspects of systematic critical appraisal of medical information.

A Political Sociology of Transnational Europe Niilo

Kauppi, 2014-02-14 Globalisation and complex

Europeanisation are two significant challenges currently influencing the restructure of the European nation-state, and redefining political power. For this volume, first-rate European scholars look at the consequences of these and other challenges faced by European societies.

Contributions revisit traditional objects of political science – state sovereignty, civil society and citizenship – mixing sophisticated empirical analyses with methodological and conceptual innovations including field theory, multiple correspondence analysis, and the study of space sets. Combining qualitative and quantitative research techniques, and macro- and micro-levels, chapters have in common a contextual analysis of politics through scrutiny of configurations of groups, representations and perceptions. A transnational perspective is the common thread linking every study in this volume, which seeks to avoid methodological nationalism.
