We Build the City Mary Banker,David J. Burney,Jayne Merkel,New York (N.Y.). Department of Design and Construction,2014 We Build The City features a selection of the exemplary infrastructure, public realm and civic building projects developed during New York City Mayor Michael R. Bloomberg's administration under Commissioner David Burney's groundbreaking Department of Design + Construction Excellence (D+CE) program. This publication celebrates the DDC's commitment to the idea that design matters and that great design reinvigorates public spaces and, ultimately, transforms people's lives. The DDC has been lauded for its fresh approach to facilitating innovative and collaborative architecture and urban planning solutions and improving public buildings, spaces and communities with a focus on design that reflects important key values: education and culture, health and safety, and diversity and opportunity. The D+CE program has offered dynamic design and construction strategies that have inspired some of the best architects and engineers in the world--and given the city's small firms--the opportunity to work with the DDC to reimagine and reshape the built environment. From the Queen's Botanical Garden, Mariner's Harbor Library, Brooklyn Children's Museum and the Bronx Museum of the Arts to Madison Avenue, Houston Street, Columbus Circle, the Central Park Precinct and PSAC II, the DDC and its pioneering D+CE initiative has helped to transform all five boroughs of the great City of New York. Highlighting the work of numerous talented design and construction firms, We Build The City showcases a collection of some the most notable public projects developed and built under the acclaimed D+CE program. Each featured project--whether large- or small-scale, visible or underground--has contributed to the improvement of the city, building upon principles of creativity, sustainability, performance, efficiency and longevity. The publication includes detailed drawings and striking imagery that reveal the complex processes that have shaped one of the most active and successful design periods in NYC's history.

Building Washington Robert J. Kapsch,2018-05-15 A richly illustrated behind-the-scenes tour of how the nation's capital was built. In 1790, George Washington and Thomas Jefferson set out to build a new capital for the United States of America in just ten years. The area they selected on the banks of the Potomac River, a spot halfway between the northern and southern states, had few resources or inhabitants. Almost everything needed to build the federal city would have to be brought in, including materials, skilled workers, architects, and engineers. It was a daunting task, and these American Founding Fathers intended to do it without congressional appropriation. Robert J. Kapsch's beautifully illustrated book chronicles the early planning and construction of our nation's capital. It shows how Washington, DC, was meant to be not only a government center but a great commercial hub for the receipt and transshipment of goods arriving through the Potomac Canal, then under construction. Picturesque plans would not be enough; the endeavor would require extensive engineering and the work of skilled builders. By studying an extensive library of original documents—from cost estimates to worker time logs to layout plans—Kapsch has assembled a detailed account of the hurdles that complicated this massive project. While there have been many books on the architecture and planning of this iconic city, Building Washington explains the engineering and construction behind it.

Building Milwaukee City Hall Dennis Pajot,2013-10-11 Milwaukee's City Hall on East Wells and North Water streets is a landmark. Not only officially, but as part of Milwaukee's identity, from the city's flag to the Laverne and Shirley sit-com in the 1970s. The site for this familiar building was not easily chosen. The final location was not the first choice for most of Milwaukee's movers and shakers, and after it was finally settled upon, the difficulties only became bigger. Battles over designs and the bidding process became politically heated and personal in nature. Cost overruns in the construction, although common at the time, grew to gigantic proportions. The completed building was, however, structurally sound and pleasing to the eye. Still standing 115 years later, it is a monument to the Milwaukee government officials, architect and builder.

Engineering the City Matthys Levy,Richard Panchyk,2000-10-01 How does a city obtain water, gas, and electricity? Where do these services come from? How are they transported? The answer is infrastructure, or the inner, and sometimes invisible, workings of the city. Roads, railroads, bridges, telephone wires, and power lines are visible elements of the infrastructure; sewers, plumbing pipes, wires, tunnels, cables, and sometimes rails are usually buried underground or hidden behind walls. Engineering the City tells the fascinating story of infrastructure as it developed through history along with the growth of cities. Experiments, games, and construction diagrams show how these structures are built, how they work, and how they affect the environment of the city and the land outside it.

Corruption and Racketeering in the New York City Construction Industry New York State Organized Crime Task Force,Ronald Goldstock,1991 This book, Corruption and Racketeering In The New York City Construction Industry: The Final Report of the New York State Organized Task Force, lays out in close and compelling detail the intricate patterns of corrupt activities and relationships that for the better part of a century have characterized business as usual in the construction industry in America's largest metropolis. The book is the end product of more than five years' worth of investigation, prosecutions, and research by the New York State Organized Crime Task Force, a unique agency that has set a national example for marrying law enforcement initiatives with comprehensive and exhausting analysis of the causes and dynamics of industrial racketeering. This is a sobering analysis of the construction industry , one of New York City's largest industries, and in effect, one of the city's most significant economic sectors. In any given year during the 1980s, billions of dollars of construction were being carried out at any one time. The industry regularly employs more than 100,000 people in the city, involving some one hundred union locals and many hundreds of general and specialty contractors as well as a large number of architects, engineers, and materials suppliers. The book shows—in great and provocative detail—how organized extortion, bribery illegal cartels, and bid rigging characterize construction in the city. The basis for much of this crim is labor racketeering, controlled or orchestrated by organized crime. It reveals how this world of corruption affects not only the private sector but the city's vast public works program, and it spells out the ways in which both organized crime and official corruption each sustain the dynamics of ongoing criminality. Wrong-doing on a massive scale is documented at length. But this book is more than a recitation of extensive and systematic criminality. The book recommends a number of plausible options for genuine reform. Necessarily these are profound and radical solutions, but everyone who reads this book will conclude that only profound and radical solutions could hope to solve such an entrenched and intractable crime problem.
