Shared-Memory Parallelism Can be Simple, Fast, and Scalable Julian Shun,2017-06-01 Parallelism is the key to achieving high performance in computing. However, writing efficient and scalable parallel programs is notoriously difficult, and often requires significant expertise. To address this challenge, it is crucial to provide programmers with high-level tools to enable them to develop solutions easily, and at the same time emphasize the theoretical and practical aspects of algorithm design to allow the solutions developed to run efficiently under many different settings. This thesis addresses this challenge using a three-pronged approach consisting of the design of shared-memory programming techniques, frameworks, and algorithms for important problems in computing. The thesis provides evidence that with appropriate programming techniques, frameworks, and algorithms, shared-memory programs can be simple, fast, and scalable, both in theory and in practice. The results developed in this thesis serve to ease the transition into the multicore era. The first part of this thesis introduces tools and techniques for deterministic parallel programming, including means for encapsulating nondeterminism via powerful commutative building blocks, as well as a novel framework for executing sequential iterative loops in parallel, which lead to deterministic parallel algorithms that are efficient both in theory and in practice. The second part of this thesis introduces Ligra, the first high-level shared memory framework for parallel graph traversal algorithms. The framework allows programmers to express graph traversal algorithms using very short and concise code, delivers performance competitive with that of highly-optimized code, and is up to orders of magnitude faster than existing systems designed for distributed memory. This part of the thesis also introduces Ligra+, which extends Ligra with graph compression techniques to reduce space usage and improve parallel performance at the same time, and is also the first graph processing system to support in-memory graph compression. The third and fourth parts of this thesis bridge the gap between theory and practice in parallel algorithm design by introducing the first algorithms for a variety of important problems on graphs and strings that are efficient both in theory and in practice. For example, the thesis develops the first linear-work and polylogarithmic-depth algorithms for suffix tree construction and graph connectivity that are also practical, as well as a work-efficient, polylogarithmic-depth, and cache-efficient shared-memory algorithm for triangle computations that achieves a 2–5x speedup over the best existing algorithms on 40 cores. This is a revised version of the thesis that won the 2015 ACM Doctoral Dissertation Award.

The Global Financial Crisis and Asia Masahiro Kawai,Mario B. Lamberte,Yung Chul Park,2012-10-25 This book demonstrates how Asian countries tried to minimize the impact of the global financial crisis, identifies structural weaknesses in their economies, and discusses policy options for strengthening Asian economies to avoid future crises and promote sustainable growth in the long-term.

The Great Contraction, 1929-1933 Milton Friedman,Anna Jacobson Schwartz,2012-12-27 Friedman and Schwartz's A Monetary History of the United States, 1867-1960, published in 1963, stands as one of the most influential economics books of the twentieth century. A landmark achievement, the book marshaled massive historical data and sharp analytics to support the claim that monetary policy--steady control of the money supply--matters profoundly in the management of the nation's economy, especially in navigating serious economic fluctuations. The chapter entitled The Great Contraction, 1929-33 addressed the central economic event of the century, the Great Depression. Published as a stand-alone paperback in 1965, The Great Contraction, 1929-1933 argued that the Federal Reserve could have stemmed the severity of the Depression, but failed to exercise its role of managing the monetary system and ameliorating banking panics. The book served as a clarion call to the monetarist school of thought by emphasizing the importance of the money supply in the functioning of the economy--a concept that has come to inform the actions of central banks worldwide. This edition of the original text includes a new preface by Anna Jacobson Schwartz, as well as a new introduction by the economist Peter Bernstein. It also reprints comments from the current Federal Reserve chairman, Ben Bernanke, originally made on the occasion of Milton Friedman's 90th birthday, on the enduring influence of Friedman and Schwartz's work and vision.

Handbook of Parallel Constraint Reasoning Youssef Hamadi,Lakhdar Sais,2018-04-05 This is the first book presenting a broad overview of parallelism in constraint-based reasoning formalisms. In recent years, an increasing number of contributions have been made on scaling constraint reasoning thanks to parallel architectures. The goal in this book is to overview these achievements in a concise way, assuming the reader is familiar with the classical, sequential background. It presents work demonstrating the use of multiple resources from single machine multi-core and GPU-based computations to very large scale distributed execution platforms up to 80,000 processing units. The contributions in the book cover the most important and recent contributions in parallel propositional satisfiability (SAT), maximum satisfiability (MaxSAT), quantified Boolean formulas (QBF), satisfiability modulo theory (SMT), theorem proving (TP), answer set programming (ASP), mixed integer linear programming (MILP), constraint programming (CP), stochastic local search (SLS), optimal path finding with A*, model checking for linear-time temporal logic (MC/LTL), binary decision diagrams (BDD), and model-based diagnosis (MBD). The book is suitable for researchers, graduate students, advanced undergraduates, and practitioners who wish to learn about the state of the art in parallel constraint reasoning.

Design Things Thomas Binder,Giorgio De Michelis,Pelle Ehn,Giulio Jacucci,Per Linde,2011-09-30 A new perspective on design thinking and design practice: beyond products and projects, toward participatory design things. Design Things offers an innovative view of design thinking and design practice, envisioning ways to combine creative design with a participatory approach encompassing aesthetic and democratic practices and values. The authors of Design Things look at design practice as a mode of inquiry that involves people, space, artifacts, materials, and aesthetic experience, following the process of transformation from a design concept to a thing. Design Things, which grew out of the Atelier (Architecture and Technology for Inspirational Living) research project, goes beyond the making of a single object to view design projects as sociomaterial assemblies of humans and artifacts--"design things." The book offers both theoretical and practical perspectives, providing empirical support for the authors' conceptual framework with field projects, case studies, and examples from professional practice. The authors examine the dynamics of the design process; the multiple transformations of the object of design; metamorphing, performing, and taking place as design strategies; the concept of the

design space as “emerging landscapes”; the relation between design and use; and the design of controversial things.

Prehistoric Slavic Contraction Jiří Marvan,1979 This book outlines the origin and process of contraction as it took place in the proto-dialects of the future Czech, Serbian, Polish, Slovak, Slovenian and Serbo-Croatian languages in about the ninth to eleventh centuries. The author's conception differs from the traditional attitude to the available data mainly in the assumption that the discriminative treatment of contraction by different proto-dialects is not a handicap but rather an efficient and safe means of reconstructing territorial, chronological and structural stratification. This factor also replaces a flat, one-level description of contraction with a process consisting of several consecutive stages. Although many gaps remain to be filled in the study of prehistoric Slavic contraction, the author hopes that his work will open the way to further inquiry into the subject by dialectologists and historians of language.

Researching Entrepreneurship Per Davidsson,2004-09-17 Entrepreneurship is a phenomenon of tremendous societal importance. It is also an elusive phenomenon, and researching entrepreneurship is therefore fun, fascinating--and frustrating at times. In *Researching Entrepreneurship*, one of the most highly recognized entrepreneurship scholars shares in a personal and readable way his rich experience and ideas on how entrepreneurship can or should be researched. After a comprehensive treatment of entrepreneurship as societal phenomenon and scholarly domain, the core chapters of the book discuss design, sampling, operationalization and analysis issues on several levels of analysis: individual, venture, firm, industry, region and nation. The author provides numerous examples of problems and solutions from real research projects, as well as experienced-based suggestions for further improvements in future work. The book is targeted primarily at doctoral students and other (relative) newcomers to the field of entrepreneurship research. However, taking a fresh, reflective perspective and looking beyond research conventions, it should provide potential for inspiration and food for thought also for experienced entrepreneurship researchers. Moreover, while the examples are taken from entrepreneurship research, the book provides a unique experienced empirical researcher (rather than textbook method expert) treatment of issues that are of equal relevance across the social sciences. This goes for topics such as the role of theory; qualitative vs. quantitative research; validity checking; statistical inference, and replication. Per Davidsson is Professor in Entrepreneurship at Brisbane Graduate School of Management, QUT, Australia, and Jönköping International Business School, Sweden. He is also Chair of the Research Committee of the Entrepreneurship Division of the (American) Academy of Management.
