New Forms of Online Converters and Calculators Joseph Nowarski, 2017-01-31 Software design professional book. Classic Internet online unit converter is designed to input one single value to receive one converted value. Conversion of more than one unit, like feet and inches to centimeters, requires frequent switching between converters, annoying, time consuming process which may lead to errors. This work describes new formats of online units' converters and dedicated calculators, to significantly improve the conversion or calculation efficiency, receiving more useful and more handy information in less effort.

Gilbert Welch, 2008-11-30 Understanding risk -- Putting risk in perspective -- Risk charts : a way to get perspective -- Judging the benefit of a health intervention -- Not all benefits are equal : understand the outcome -- Consider the downsides -- Do the benefits outweigh the downsides? -- Beware of exaggerated importance -- Beware of exaggerated certainty -- Who's behind the numbers?

Dimensional Analysis for Unit Conversions Using MATLAB Roger W. Pryor, 2018-06-19 This book and MATLAB® app package will accurately convert values from one unit of measure to another using standard conversion factors. It performs conversions from and to the inch-pound system units used in the USA and the International System of Units (SI) as documented in the National Institute of Standards and Technology (NIST) publications of conversions for general use. There are 1,316 conversion factors available for bidirectional conversion from / to SI units, organized into 44 minor subsections by topic under eight major topical sections. There is also an alphabetical section comprising 445 conversion factors for unidirectional conversion to SI units. It also converts CGS and other “unacceptable” units (conversion factors not for general use, i.e. as in science, engineering, etc.). The application performs all three steps in the

conversion process: application of the relevant conversion factor, selection of significant digits, and rounding of the result. Conversion factors designated as “exact” are definitions, or they have been set by agreements that define the factor value precisely. All other conversion factors, designated as “derived,” result from truncation of decimal places and/or calculation by a combination of other factors. The unit converter will run on any MacOS or Windows platform that has MATLAB R2018A or R2018B installed. FEATURES: • Performs all three steps in the conversion process: application of the relevant conversion factor, selection of significant digits, and rounding of the result. • Converts values from one unit of measure to another using standard conversion factors. It performs conversions from and to the inch-pound system units used in the USA and also the International System of Units (SI). The companion files include: -- The MATLAB conversion app. The unit converter will run on any MacOS or Windows platform that has MATLAB R2018A or R2018B installed. A Two-Channel Analog-to-Digital Converter for the Tektronix 909 Scientific Calculator Harold C. Schleicher, 1972 The design and construction of an analog-to-digital converter for interface with the Tektronix 909 Scientific Calculator was undertaken. Use of the calculator was greatly enhanced in the area of data processing by allowing on-line sampling and processing of two simultaneous signals. An investigation into the feasibility of using the 909, the A/D and a D/A in the simulation of sampled data systems, or as a digital controller for a continuous plant was conducted. (Author).
