Sled Driver Brian Shul,Sheila Kathleen O'Grady,1991 No aircraft ever captured the curiosity & fascination of the public like the SR-71 Blackbird. Nicknamed The Sled by those few who flew it, the aircraft was shrouded in secrecy from its inception. Entering the U.S. Air Force inventory in 1966, the SR-71 was the fastest, highest flying jet aircraft in the world. Now for the first time, a Blackbird pilot shares his unique experience of what it was like to fly this legend of aviation history. Through the words & photographs of retired Major Brian Shul, we enter the world of the Sled Driver. Major Shul gives us insight on all phases of flying, including the humbling experience of simulator training, the physiological stresses of wearing a space suit for long hours, & the intensity & magic of flying 80,000 feet above the Earth's surface at 2000 miles per hour. SLED DRIVER takes the reader through riveting accounts of the rigors of initial training, the gamut of emotions experienced while flying over hostile territory, & the sheer joy of displaying the jet at some of the world's largest airshows. Illustrated with rare photographs, seen here for the first time, SLED DRIVER captures the mystique & magnificence of this most unique of all aircraft.

Area 51 - Black Jets Bill Yenne,2018-02-20 Area 51's most important military aviation developments are profiled in an illustrated format. When most of us think of Area 51, we think of aliens, UFOs, and controversial government cover-ups. It's easy to forget that, since the mid-1950s, the United States' famed extension of Edwards Air Force Base has served as a top-secret CIA testing ground for many of the most groundbreaking advancements in American military aviation technology. In Area 51 - Black Jets, author and military historian Bill Yenne offers the first fully illustrated chronology of Area 51's most famous aircraft projects, including Lockheed's U-2 Dragon Lady and SR-71 Blackbird reconnaissance planes, drones ranging from the early Lockheed D-21 to the modern-day General Atomics MQ-1 Predator, and the famous F-117 Nighthawk stealth fighter produced by the Have Blue program during the 1970s. Each project is given its own fascinating chapter illuminating the aircraft's development at this famed location. But beyond the aircraft themselves, Area 51 - Black Jets also covers a handful of the many classified experimental programs carried out at Area 51 over the years, such as Have Doughnut, Have Ferry, and Have Drill - secret undertakings that successfully reverse-engineered such enemy aircraft as the Russian MiG during the Cold War. Presented in beautiful hardcover format and illustrated with historic color and black-and-white photographs, diagrams, and maps, this book reveals Area 51 for what it truly is: a clandestine area for the United States' most cutting-edge technological innovators in military aviation.

The Textual Life of Airports Christopher Schaberg,2011-12-01 This is a book about airport stories. It is about common narratives of airports that circulate in everyday life, and about the secret stories of airports-the strange or hidden narratives that do not always fit into standard ideas of these in-between places. Tales of near disaster, endless delays, dramatic weather shifts, a lost bag that suddenly appears-such stories are familiar accounts of a place that seems to thrive on and recycle its own mythologies. The Textual Life of Airports shows how airports demand to be read. Working at the intersection of literary studies and cultural theory, Schaberg tracks airport stories in American literature, as well as in a range of visual texts (film, airport art, magazine illustrations). It accounts for how airports appear in literature throughout the twentieth-century, while also examining the influx of airport figures in markedly post-9/11 literature and culture. These literary and cultural representations work together to form the textual life of airports.

The CIA and the U-2 Program 1954-1974 Gregory W. Pedlow,Donald E. Welzenbach,1998 A comprehensive & authoritative history of the CIA's manned overhead reconnaissance program (MORP), which from 1954 to 1974 developed & operated 2 extraordinary aircraft, the U-2 & the A-12 OXCART. Describes not only the program's technological & bureaucratic aspects, but also its political & international context. The MORP, along with other overhead systems that emerged from it, changed the CIA's work & structure in ways that were both revolutionary & permanent. The formation of the Directorate of S&T in the 1960s, principally to develop & direct reconnaissance programs, is the most obvious legacy of the events in this study.

Secret Genesis of Area 51, The TD Barnes,2017 In 1955, the Central Intelligence Agency established a clandestine base of operations in the Nevada desert with a mission to protect the United States from a growing communist threat. Special projects at Area 51 were shrouded in mystery, and the first was one of the world's most famous spy planes, the U-2. It fueled half-truths, rumors and legends for more than half a century. Now with many details of that endeavor declassified, the real story can finally be told. Author and Area 51 veteran TD Barnes sifts fact from fiction in one of America's most protected origin stories.
