Galaxy Collisions Curtis Struck, 2011-02-04 The spectacular images of galaxy collisions capture the imagination. This book will show what is out there in the universe, what it's like in other galaxies, what they might look like, and how cosmic processes might affect life in other solar systems. It will explain crucial stages in the development of physical structure in the universe, and the effect of galaxy scale processes. Professor Struck will explore all the issues surrounding galaxy collisions. He will begin with a brief broad review of the background on galaxies, the history of their discovery, and how this has been driven by steadily improving technology. Chapter 2 gives details of the early stages of different types of galaxy collision - Rings of Fire, Tidal Swings and Retrograde and Sideways Reels - while Chapter 3 describes collisions between galaxies of very different masses: minor merger or dwarf destruction. Chapter 4 covers ultra-luminous infrared galaxies and major mergers and Chapter 5 briefly examines the techniques used for computer simulation results and how increasing computer capacity has affected the development of this field. The following chapter looks at understanding the physical processes of triggered star formation and nuclear activity. Chapters 7-9 look at the broader view of cosmological structure growth which determines the environment and conditions in which galaxy collisions occur. In the densest environments, this process repeats itself on the larger scale of galaxy clusters. The concluding chapter considers what a galaxy collision looks like from a solar system like ours. Although the galaxy is completely restructured and the night sky view would change greatly over the course of several hundred million years, the direct effects on our planet would be few and infrequent, with only a small probability of being truly catastrophic. These issues will be explored along with the ideas that galaxies must reach a certain evolutionary maturity before they can even form solar systems, and that there are habitable zones within galaxies. Thus, galaxy scale processes, like collisions, can determine the fate of life on Earth-like planets.

Cosmic Collisions Dana Desonie,2014-01-14 Cosmic collisions have forever shaped the planets in our solar system, sculpting Earth and our Moon. They are still happening right in our neighborhood, as we saw in July 1994 when comet fragments bombarded the surface of Jupiter. What if a collision of that magnitude were to occur on Earth? Would the effect be anywhere near that of the collision that wiped out the dinosaurs 65 million years ago? Scientists have just begun to track distant asteroids and comets that may pose a threat to Earth in years to come. In Scientific American Focus: Cosmic Collisions Dana Desonie traces the history of cosmic collisions and proposes various solutions to what many view as our impending doom, answering these questions and more: -How often does Earth experience a cosmic collision? -Did a massive collision kill off the dinosaurs? -How do scientists track and predict collisions? -What did we learn from the Jupiter collision of 1994? -How real is the threat of a collision in our future? -How can we defend our planet?

American Cosmic D.W. Pasulka, 2019-01-18 More than half of American adults and more than seventy-five percent of young Americans believe in intelligent extraterrestrial life. This level of belief rivals that of belief in God. *American Cosmic* examines the mechanisms at work behind the thriving belief system in extraterrestrial life, a system that is changing and even supplanting traditional religions. Over the course of a six-year ethnographic study, D.W. Pasulka interviewed successful and influential scientists, professionals, and Silicon Valley entrepreneurs who believe in extraterrestrial intelligence, thereby disproving the common misconception that only fringe members of society believe in UFOs. She argues that widespread belief in aliens is due to a number of factors including their ubiquity in modern media like *The X-Files*, which can influence memory, and the believability lent to that media by the search for planets that might support life. *American Cosmic* explores the intriguing question of how people interpret unexplainable experiences, and argues that the media is replacing religion as a cultural authority that offers believers answers about non-human intelligent life.

Evolving Cosmos Govert Schilling, 2004-11-18 Science journalist Govert Schilling takes the reader on a whirlwind journey through time by describing the evolution of the cosmos, from the beginning of space and time fourteen billion years ago, to the creation of the Earth and humankind. Ending with a glance into the distant future of the universe, the book's combination of compelling text and breathtaking photographs provides an impressive vision of the place of man in the cosmos. Govert Schilling is a Dutch science writer and astronomy publicist. He is a contributing editor of *Sky and Telescope* magazine, and regularly writes for the news sections of *Science* and *New Scientist*. Schilling is the astronomy writer for *de Volkskrant*, one of the largest national daily newspapers in The Netherlands, and frequently talks about the Universe on Dutch radio broadcasts. He is the author of more than twenty popular astronomy books, including *Flash!* (Cambridge, 2002), and hundreds of newspaper and magazine articles on astronomy.

Myth-Making and Religious Extremism and Their Roots in Crises Arthur G. Neal, Helen Youngelson-Neal, 2015-10-29 According to sociologist C. Wright Mills, we do not live in a world of solid fact but in a world permeated by culture, constructed by humans through communication with each other. Myth-making shapes our lives, beliefs and behavior. Collective myths become plausible explanations for events past and future as each new generation constructs reality anew to make sense of the human condition. Providing a sociological and multicultural analysis, this book examines myth-

making in the today's world amid religious extremism and terrorism. The authors discuss the imperative of myth in comprehending illness, sexuality, death and human relationships to the environment and other animals.

Fire in the Sky Gordon L. Dillow, 2019-06-04 Combining history, pop science, and in-depth reporting, a fascinating account of asteroids that hit Earth long ago, and those streaming toward us now, as well as how we are preparing against asteroid-caused catastrophe. One of these days, warns Gordon Dillow, the Earth will be hit by a comet or asteroid of potentially catastrophic size. The only question is when. In the meantime, we need to get much better at finding objects hurtling our way, and if they're large enough to penetrate the atmosphere without burning up, figure out what to do about them. We owe many of science's most important discoveries to the famed Meteor Crater, a mile-wide dimple on the Colorado Plateau created by an asteroid hit 50,000 years ago. In his masterfully researched *Fire in the Sky*, Dillow unpacks what the Crater has to tell us. Prior to the early 1900s, the world believed that all craters—on the Earth and Moon—were formed by volcanic activity. Not so. The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs, and it has opened up a new field of asteroid observation, which has recently brimmed with urgency. Dillow looks at great asteroid hits of the past and spends time with modern-day asteroid hunters and defense planning experts, including America's first Planetary Defense Officer. Satellite sensors confirm that a Hiroshima-scale blast occurs in the atmosphere every year, and a smaller, one-kiloton blast every month. While Dillow makes clear that the objects above can be deadly, he consistently inspires awe with his descriptions of their size, makeup, and origins. At once a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead, *Fire in the Sky* is, above all, a testament to our universe's celestial wonders.

Suffering and the Heart of God Diane Langberg, 2015-09-01 She's seen slave dungeons in Ghana. Genocide in Rwanda. Systemic sexual abuse in Brazil. Child abuse and domestic violence in the US. After forty years of counseling abuse survivors around the world, Dr. Diane Langberg, a world renowned trauma expert, remains certain that what trauma destroys, Christ can and does restore. This book will convince you, too, of the healing heart of God. But it's not a fast process, instead much patience is required from family, friends, and counselors as they wisely and respectfully help victims unpack their traumatic suffering through talking, tears, and time. And it's not a process that can be separated from the work of God in both a counselor and counselee. Dr. Langberg calls all of those

who wish to help sufferers to model Jesus's sacrificial love and care in how they listen, love, and guide. The heart of God is revealed to sufferers as they grow to understand the cross of Christ and how their God came to this earth and experienced such severe suffering that he too is well-acquainted with grief. The cross of Christ is the lens that transforms and redeems traumatic suffering and its aftermath, not only for the sufferer, but it also transforms those who walk with the suffering. This book will be a great help to anyone who loves, listens to, and seeks to help someone impacted by trauma and abuse. There is no quick fix, but there is the hope for healing through the love of God in Christ.
